Updated Incumbent C-Band Earth Station List December 9, 2022 – Explanatory Notes

This Appendix is based on current information in IBFS as of December 9, 2022. The List represents staff determinations about which earth stations have satisfied the criteria for incumbent earth station status set forth in Expanding Flexible Use of the 3.7 to 4.2 GHz Band, Report and Order and Order of Proposed Modification, 35 FCC Rcd 2343, 2392, para. 116 (2020) (3.7 GHz Report and Order). This List relates only to operations in the 3700-4200 MHz band, and is limited to earth stations located in the contiguous United States, which may elect the lump sum option under the terms of the 3.7 GHz Report and Order. The machine-generated Changelog shows changes as compared with the April 4, 2022 List. To the extent there are discrepancies between this List and the Changelog, the List is determinative.

ApplicantName – the name in IBFS of the Applicant in the case of a pending Application, or of the Licensee or Registrant in the case of a current authorization.

Callsign, FileNumber, & Filing State – the callsign that designates a particular authorization. The associated FileNumber identifies the Application that includes the details of the current authorization. Filing State is either "current“ or "pending."

Red Light – as presented here, denotes presence of “red light” status if there is a pending Application affecting this Callsign subject to a "red light." Under its “red light” rules, the Commission may not grant license applications from Applicants who have outstanding debts to the U.S. Government. *See* 47 CFR § 1.1910(b)(2). The applicant is informed that action will be withheld on the application until full payment or arrangement to pay any non-tax delinquent debt owed to the Commission is made and/or that the application may be dismissed. *Id.* Normal practice regarding pending Applications from parties with “red light” issues is to include such Applications on Accepted for Filing Public Notices, but withhold grant of the application until the red light issue is resolved. This List follows that practice by including pending Applications that have satisfied the requirements for Incumbent Earth Station status, but marking those subject to the ”red light” rules in the "Redlight" column. Any Commission action taken prior to the payment of delinquent non-tax debt owed to the Commission is contingent and subject to rescission. *Id.*

AppType & Accepted for Filing PN – AppTypes available in IBFS for this Band. The information included in IBFS for pending Modification applications (MOD & MFS) to current authorizations depends on the status of its review. If a pending Modification application has not been placed on Accepted for Filing Public Notice, the specific modifications requested are not reflected in IBFS in the MOD application but only in an Attachment to the Modification application. If a Modification application has been placed on Accepted for Filing Public Notice, the modifications requested are included in the IBFS data fields.

Class of Earth Station – which of the two classes of earth stations that may qualify for Incumbent status -- Fixed Earth Stations (FES) and Temporary Fixed Earth Stations (TFE).

SiteID – the designation by the Applicant of a particular site for the location of antennas under the specific Callsign.

AntennaID & Quantity – the designation by the Applicant of a particular antenna or antenna type. Often, an AntennaID represents a particular Manufacturer and Model of antenna – information that also is in IBFS. The quantity represents the number of antennas associated with that AntennaID at that site.

Callsign Subject to Lump Sum Election & Intended Action -- identification by Callsign which earth station antennas are subject to an accepted lump sum election and whether the earth station operator intends to migrate the antenna to the upper 200 megahertz of 3.7-4.2 GHz by the end of the transition or to discontinue use of the C band by that antenna

Site Address and GPS Coordinates – the address and the GPS coordinates of the particular SiteID.

Changelog Notes - Changes column (major categories):

"Callsign Removed" - includes both cases where Callsigns have been surrendered by the authorization holder and cases where Callsigns have been terminated by operation of DA 21-81, DA 21-893, or DA 21-1206.

"Callsign Added" - often reflects situations in which the authorization holder as of October 2021 has assigned a subset of existing incumbent earth station antennas under a single Callsign to a new authorization holder. Assignment applications in IBFS only apply to situations where all the antennas under a Callsign are being assigned. When an authorization holder is assigning only a subset of antennas, Commission staff has directed the assignor to file a MOD closing out those antennas from its Callsign and the assignee to file a new REG for those antennas, which will be carried under a new Callsign

"New FileNumber" - indicates that there is a new filing for that Callsign. If the new Filenumber is "current," it has become the current authorization - such as a renewal. If the new Filenumber is "pending," the details of that filing can be found, at a minimum, as an attachment to that filing in IBFS.

List of Incumbent Earth Stations - CONUS (alphabetical by Applicant Name) December 9, 2022
