NATIONAL TELECOMMUNICATIONS AND INFORMATION ADMINISTRATION (NTIA) RELEASES ADDITIONAL DRAFT PROPOSALS FOR THE 2000 WORLD RADIOCOMMUNICATION CONFERENCE (WRC-2000)

The National Telecommunications and Information Administration (NTIA) on behalf of the Executive Branch Agencies, has approved the release of additional proposals for WRC-2000 which were developed by NTIA's Radio Conference Subcommittee (RCS). Included are: 1) a draft proposal for conference Agenda Item 1.15.1 (new allocations to the Radionavigation-Satellite Service (RNSS)) that proposes no change to the existing allocations in the 5000-5150 MHz band, 2) proposed changes to an existing draft proposal for Agenda Item 1.16 that improves the allocation status for the Fixed-Satellite Service (FSS) in the 231.5-241 GHz band while affording greater protection for the Radio Astronomy Service in adjacent bands, 3) a draft proposal for the modification Recommendation **66** based on the progress of work in the ITU-R, and 4) a draft proposal for the suppression of Resolutions **60** and **63** since work in the ITU-R related to these resolutions has been completed. We request comments on all of these draft proposals.

The complete text of the NTIA draft proposals is also available in the FCC's Reference Information Center, Court Yard Level (Room CY-A257), 445 12th Street, S.W., Washington, D.C. or by accessing the FCC's WRC-2000 world wide web site at: http://www.fcc.gov/wrc-00. To comment on these draft proposals, please submit an original and one copy of your comments to the Office of the Secretary, Federal Communications Commission, 445 12th Street, S.W., Washington, D.C. 20554. Comments should refer to specific draft proposals. Parties preferring to e-mail their comments should address their comments to: wrc-00@fcc.gov. The deadline for comments on the draft proposals is January 21, 2000.

The comments provided will be of assistance to the FCC in consultations with the U.S. Department of State, the National Telecommunications and Information Administration, and other government agencies in preparing for WRC-2000. The draft proposals set forth herein may evolve in the course of interagency discussions and therefore do not constitute a final U.S. Government position.

Proposals for Agenda Item 1.15.1

to consider new allocations to the radionavigation-satellite service in the range from 1 to 6 GHz required to support developments

Proposal for additional Radionavigation Satellite Service (RNSS) signals

Background Information: The 5 GHz band presents no unique advantages for new RNSS systems and all RNSS requirements can be satisfied by existing and new allocation to be implemented in the 1200 and 1600 MHz bands. The increased power required at 5 GHz compared to the lower frequencies makes an allocation for RNSS at 5 GHz questionable because it may not be feasible to implement satellite networks from an economic standpoint.

ITU-R studies to date do not support the need for an allocation for RNSS at 5 GHz. There are a number of unresolved sharing situations at 5 GHz including protection the international Microwave Landing System (MLS) and Mobile-Satellite (MS) feeder links now operating at 5000-5150 MHz.

There are recognized difficulties in fully protecting existing Radio Astronomy operations. See the CPM Report, Section 2.4.1.3.1: "The separation distance between RNSS (space-to-earth) and the radio astronomy service would be a minimum of 10 MHz to protect Radio Astronomy inside its allocation. This may cause difficulties due to the radio astronomy receiver sensitivity outside the band allocated to the radio astronomy service."

Studies under Resolution **114 (WRC-95)** are continuing and could result in changes in the future use of the 5000-5150 MHz band.

Proposal:

USA/ /1

NOC

4 800-5 830 MHz

Allocation to services				
Region 1		Region 2	Region 3	
5 000-5 150	AERONAUTICAL RADIONAVIGATION			
	S	5.367 S5.444 S5.444A		

Reasons: ITU-R studies to date do not support the need for an allocation for RNSS at 5 GHz.

Proposals for Agenda Item 1.16

to consider allocations of frequency bands above 71 GHz to the earth-exploration satellite (passive) and radio astronomy services, taking into account Resolution **723**

Proposed Changes to Existing Draft Proposal on Agenda Item 1.16

Background Information: The following is a proposed change to the existing draft proposal on Agenda item 1.16 that was unable to be agreed to prior to the December CITEL meeting. The change replaces the portion of the allocation table from 231.5-241 GHz and improves the allocation status of the FSS within this band while affording greater protection to the RAS in adjacent bands as well.

Proposal:

	231 5 238	
	Allocation to Services	
Dagion 1	Region 2	Dogion 2
		Kegioli 5
$\underline{231.5} - \underline{232}$	FIXED	
	FIXED-SATELLITE (space	e-to-Earth)
	MOBILE	
	Radiolocation	
<u>232</u> – 235	FIXED	
	FIXED-SATELLITE (space	ce-to-Earth)
	MOBILE	
	Radiolocation	
235 - 238	EARTH EXPLORATION	-SATELLITE (passive)
	FIXED	
	FIXED-SATELLITE (space	ce-to-Earth)
	MOBILE	,
	SPACE RESEARCH (pass	sive)
238 - 2410	FIXED	ł
-	FIXED-SATELLITE (space	ce-to-Earth)
	MOBILE	,
	RADIOLOCATION	
	RADIONAVIGATION	
	RADIONAVIGATION-SA	ATELLITE
	Radiolocation	
240 - 241	FIXED	
	FIXED-SATELLITE (space	e-to-Earth)
	MOBILE	,
	RADIOLOCATION	
	Radiolocation	
	Region 1 231.5 - 232 232 - 235 235 - 238 238 - 2410 240 - 241	231.5 – 238 Allocation to Services Region 1 Region 2 231.5 – 232 FIXED FIXED SATELLITE (space MOBILE Radiolocation 232 – 235 FIXED SATELLITE (space MOBILE Radiolocation 235 – 238 EARTH EXPLORATION-FIXED FIXED SATELLITE (space MOBILE RADIOLOCATION FIXED FIXED SATELLITE (space MOBILE ADIOLOCATION RADIOLOCATION RADIOLOCATION

Reasons: The tables from 231.5 GHz to 241 GHz are to be replaced as shown. By eliminating the FSS from the band 231.5-232 GHz, a guard band is provided to protect the adjacent radio astronomy service allocation. Similarly, the FSS is deleted from the band 240-241 GHz for the same reason. In

GHz

order to compensate the FSS for these changes, the FSS allocation from 235-238 GHz, which was deleted in the current draft proposal, is reinstated in that band to result in an overall contiguous FSS downlink allocation of 8 GHz from 232-240 GHz. So that the EESS (passive) does not have the burden of sharing with both the FSS and the FS and MS in the 235-238 GHz band, the terrestrial services have been eliminated from the band. The overall allocations to the FS and MS in the draft proposal are still more than adequate as compared with the current allocation tables.

Proposals for the Work of the Conference

Modification of RECOMMENDATION 66 (Rev.WRC-97)

Background Information: Recommendation 66 is being modified to reflect the current status of this document. Work has been completed on space service spurious emissions, so we are proposing the suppression of *Considering f, recommends 1 and 2* -. We are editing "*Recognizing I*" to conform to the concept in the *recommends* that limits may be needed for specific situations. We are proposing the suppression of *Recommends 9* because TG1/5 has concluded that OOB emission limits are not appropriate at this time.

USA/ /7

MOD

RECOMMENDATION 66 (Rev.WRC-972000)

Reasons: Editorial

Studies of the maximum permitted levels of unwanted emissions

The World Radiocommunication Conference (Geneva, 1997),

considering

a) that Appendix **S3** specifies the maximum permitted levels of spurious emissions, in terms of the mean power level of any spurious component supplied by a transmitter to the antenna transmission line;

b) that the principal objective of Appendix **S3** is to specify the maximum permitted levels of spurious emissions that, while being achievable, provide protection against harmful interference;

c) that excessive levels of unwanted emissions may give rise to harmful interference;

d) that while out-of-band emissions can also give rise to harmful interference, the Radio Regulations do not provide general limits for these emissions;

e) that while Appendix **S3** applies generally to the mean power of a transmitter and its spurious emissions, it also takes account of a variety of emissions where interpretation of the term "mean power", and thus its measurement, would be difficult, particularly in the cases of digital modulation broadband systems, pulsed modulation and narrow-band high-power transmitters;

USA/ /8 SUP

f) that while Appendix **S3** covers spurious emissions for all radio services, those listed for space services are included only as design objectives;

Reasons: Work has been completed on space service spurious emissions.

USA/ /9 (MOD)	g(f) that unwanted emissions from transmitters operating in space stations may cause harmful interference, particularly emissions from wideband amplifiers which cannot be adjusted after launch;
	h)g) that unwanted emissions may cause harmful interference to safety services and radio astronomy and space services using passive sensors;
	Reason: Consequential numbering changes
USA/ /10 MOD	<i>i)h)</i> that, for technical or operational reasons, more stringent spurious emission limits than the general limits in Appendix S3 may be required to protect specific services, such as safety services and passive services in specific bands or <u>situations</u> ;
	Reasons: Edited to conform to the concept in the recommends that limits may be needed for specific situations.
USA/ /11 (MOD)	$\frac{j}{i}$ that broadband digital modulation may cause unwanted emissions at frequencies far from the carrier frequency,
	Reasons: Consequential numbering change
	noting
	<i>a)</i> that safety services and passive services have in many cases been allocated frequencies adjacent or close to those of services employing high-power transmitters;
	b) that some administrations have adopted more stringent limits for spurious emissions than those specified in Appendix $S3$,
	recommends that ITU-R
USA/ /12 SUP	1 study, as a matter of urgency, the question of spurious emissions resulting from space service transmissions, and, on the basis of those studies, develop Recommendations for maximum permitted levels of spurious emissions in terms of mean power of spurious components supplied by the transmitter to the antenna transmission line;
	Reasons: Work has been completed on space service spurious emissions.
USA/ /13	2 submit a report to WRC-99 on the results of its studies with a view to
SUP	reviewing and including spurious emission limits for space services in Appendix S3 ;
	Reasons: Work has been completed on space service spurious emissions.
USA/ /14	31 continue the study of spurious emission levels in all frequency bands,
(MOD)	techniques not presently covered by Appendix S3 ;

	Reason: Consequential numbering changes
USA/ /15 (MOD)	42 study the question of unwanted emissions resulting from transmitters of all services and all modulation methods, and, on the basis of those studies, develop a Recommendation or Recommendations for maximum permitted levels of spurious emissions and out-of-band emissions;
	Reason: Consequential numbering changes
USA/ /16 (MOD)	53 establish appropriate measurement techniques for unwanted emissions, where those techniques do not currently exist, including the determination of reference levels for wideband transmissions as well as the applicability of reference measurement bandwidths;
	Reason: Consequential numbering changes
USA/ /17 (MOD)	64 study the reasonable boundary of spurious emissions and out-of-band emissions with a view to defining such a boundary in Article S1;
	Reason: Consequential numbering changes
USA/ /18 (MOD)	75 study those frequency bands and instances where, for technical or operational reasons, more stringent spurious emission limits than the general limits in Appendix S3 may be required to protect safety services and passive services such as radio astronomy, and the impact on all concerned services of implementing or not implementing such limits;
	Reason: Consequential numbering changes
USA/ /19 (MOD)	$\frac{\$6}{100}$ study those frequency bands and instances where, for technical or operational reasons, out-of-band limits may be required to protect safety services and passive services such as radio astronomy, and the impact on all concerned services of implementing or not implementing such limits;
	Reason: Consequential numbering changes
USA/ /20 SUP	9 report to a future competent world radiocommunication conference the results of studies under <i>recommends that ITU-R</i> 3, 4 and 5 above, with a view to recommending whether or not it is appropriate to include general limits for out-of-band emissions in the Radio Regulations;
	Reasons: Suppressed because TG1/5 has concluded that OOB emission limits are not appropriate at this time.
USA/ /21 (MOD)	$\frac{107}{6}$ report the results of studies under <i>recommends that ITU-R</i> 6, 7 and 8 4, 5 and 6 above to a competent world radiocommunication conference(s).
	Reason: Consequential numbering change

Proposals for the Work of the Conference

Suppression of Resolutions 60 and 63

Background Information: A proposal for the suppression of Resolution 60 is being submitted because this resolution is no longer needed. Resolution 63 is being suppressed because the work of TG1/2 related to this resolution has been completed.

USA/ /22

SUP

RESOLUTION 60

Relating to information on the propagation of radio waves used in the determination of the coordination area

Reasons: WP3M provided updated propagation material to TG1/6. Resolution no longer required.

USA/ /23

SUP

RESOLUTION 63

Relating to the protection of radiocommunication services against interference caused by radiation from industrial, scientific and medical (ISM) equipment

Reasons: TG1/2 completed work related to Resolution 63.
