

Table I of Station Assignment and Service Information
December 21, 2004

The NTSC station facilities and service information shown on this report are based on NTSC facilities authorized by license, or, if a station has a construction permit for new NTSC facilities (CP), the listed NTSC information for such station are based on the facilities authorized on its construction permit. DTV station facilities and service information are based on the designations in the Form 381 filings by the stations.

Information for single-channel DTV and NTSC stations appear at the end of the report.

The ERP columns are effective radiated power in kilowatts. The HAAT columns are antenna height above average terrain in meters. For both NTSC and DTV facilities, if the authorized antenna height above average terrain (HAAT) is zero or negative, the value in the table has been rounded up to a positive 01 (stations in this situation should not consider this to be an error). The location columns are latitude over longitude, expressed in degrees, minutes and seconds as DDDMMSS.S.

The NTSC and DTV pop and area columns are the population and area (people and square kilometers) within the NTSC Grade B or the DTV service contour where service is predicted based on consideration of intervening terrain and interference from other DTV and NTSC stations.

The service area and population served data reported on this Table will in many case be different from that reported on the October 7, 2004 Table of Station Assignment and Service Information due to certifications, corrections and updates submitted or applied subsequent to October 7, 2004. In addition, some of these differences reflect the certain minor modifications to the Commission's interference analysis methods to more closely conform them to the Commission's rules and industry practices.
