

Table II of 1998 Station NTSC and DTV Replication Information
December 21, 2004

This Table shows the 1998 NTSC and DTV replication facilities and service information for stations with paired DTV channels. The station facilities and service information shown on this Table are based on the 1997 authorized NTSC facilities used to develop the 1998 initial DTV Table of Allotments and the U.S. Census Population data from the Year 2000 national census. This information will be used by the Commission to determine the minimum service that a DTV station must provide under the build out requirements for stations that do not remain on their current DTV channel after the DTV transition ends, *see Report and Order* in MB Docket No. 03-15, FCC 04-192, released September 7, 2004, at ¶¶ 78-87.

The ERP columns are effective radiated power in kilowatts. The HAAT columns are antenna height above average terrain in meters. For both NTSC and DTV facilities, if the authorized antenna height above average terrain (HAAT) is zero or negative, the value in the table has been rounded up to a positive 01 (stations in this situation should not consider this to be an error). The location columns are latitude over longitude, expressed in degrees, minutes and seconds as DDDMMSS.S.

The NTSC and DTV pop and area columns are the population and area (people and square kilometers) within the NTSC Grade B or the DTV service contour where service is predicted based on consideration of intervening terrain and interference from other NTSC stations. Consistent with the way the 1998 initial DTV Table of Allotments was established, the DTV replication service also reflects the effect of interference from other DTV stations in the initial table.

Stations with an asterisk (*) in their DTV replication service area and population served fields on Table II have been granted authorizations to operate their DTV service on a channel that is different from the channel they were assigned in the 1998 initial DTV Table of Allotments. DTV replication service area and population served must therefore be computed differently for those stations. DTV service area and population served for stations that have been granted a DTV change are shown on Table IIa.
