

Variable	Description
Provider	Name of the residential voice provider reporting the rate.
Service	The type of voice service for which rates are reported. Either "Unlimited or Flat-rate Local Service" or "Unlimited All-Distance Service"
Technology	Indicates whether service is reported as Circuit Switched, VoIP, or both.
RSC	Monthly "Recurring Service Charge" rate component reported for the service.
StSLC	State Subscriber Line Charge rate component reported for the service.
StUSF	State USF rate component reported for the service.
MinEAS	Minimum mandatory Extended Area Service rate component reported for the service.
FSLC	Federal Subscriber Line Charge rate component reported for the service.
ILEC	"Y" or "N" to indicate whether the rates are reported by a respondent classifying itself on FCC Form 477 as ILEC or Non-ILEC.
Weight	Reflects the density of voice providers offering service in the census tract and the frequency of the census tract's selection in the survey sample.

Notes

1. A sample of 500 urban census tracts was randomly selected using the "Random Choice" function in Mathematica from a list of 58,332 urban census tracts encompassing the 50 states and Puerto Rico. The selection was weighted proportionately by the number of households in the census tracts. For each census tract selected, the ZIP code that most closely corresponded to that census tract was identified. Based on Form 477 December 2012 filings, the Bureau developed a list of fixed terrestrial providers offering voice service to residential customers in each ZIP code in the sample. A service provider was randomly chosen for each census tract selected. These service providers were weighted so that non-incumbent local exchange carriers that nationally have low voice connection density per ZIP code area had a lower probability of being selected than other service providers. Each provider was assigned a weight=1 if it identified itself on FCC Form 477 as an ILEC or if, on a national basis, the affiliated entity had 160 voice connections or greater per ZIP code. If neither of those criteria applied, the provider was assigned a weight= $1/(N+1)$ where N is the number of providers in the ZIP code not meeting either of those criteria. For each occurrence of a census tract in the sample, one carrier was randomly selected using the "Random Choice" function in Mathematica with the selection proportional to this weight.

2. In the data file, each row represents the voice provider's reported rates in a specific Census tract within the state for the specified service. Some respondents reported rates for both services ("Unlimited or Flat-rate Local Service" or "Unlimited All-Distance Service").
3. When providers reported multiple rates within a census tract or service provided through multiple technologies in the same census tract, the rate values were averaged to generate a single rate for the tract.
4. For each observation, the value used in the rate floor calculations is determined by adding RSC, StSLC, StUSF, and MinEAS.
5. For each observation, the value used in the reasonable comparability benchmark is determined by adding RSC, StSLC, StUSF, MinEAS, and FSLC.
6. The Rate Floor weighted average (overall or for any subclass of Providers) = the column sum of the row products of $(RSC+StSLC+StUSF+MinEAS) * (Weight) / \text{the column sum of Weight}$.
7. The ILEC rate floor weighted average for Unlimited or Flat-rate Local Service is \$20.46 with margin of error +/- \$0.69. The weighted averages can be calculated from the data presented, but the margins of error cannot be calculated.
