

Updated Incumbent C-Band Earth Station List November 30, 2020 – Explanatory Notes

This Appendix is based on current information in IBFS as of November 18, 2020. The List represents staff determinations about which earth stations have satisfied the criteria for incumbent earth station status set forth in *Expanding Flexible Use of the 3.7 to 4.2 GHz Band*, Report and Order and Order of Proposed Modification, 35 FCC Rcd 2343, 2392, para. 116 (2020) (*3.7 GHz Report and Order*). This List relates only to operations in the 3700-4200 MHz band, and is limited to earth stations located in the contiguous United States, which may elect the lump sum option under the terms of the *3.7 GHz Report and Order*.

ApplicantName – the name in IBFS of the Applicant in the case of a pending Application, or the Licensee or Registrant in the case of a current authorization.

Callsign, FileNumber, & Filing State – the callsign that designates a particular authorization. The associated FileNumber identifies the Application that includes the details of the current authorization. Filing State is either "current" or "pending."

Red Light – as presented here, the “red light” status of a pending Application. The August 3rd Public Notice gave applicants subject to "red light" status at that time 30 days to clear that status. None of those applicants did so, so those earth stations are not included on this Updated List.

AppType & Accepted for Filing PN – AppTypes available in IBFS for this Band. The information included in IBFS for pending Modification applications (MOD & MFS) to current authorizations depends on the status of its review. If a pending Modification application has not been placed on Accepted for Filing Public Notice, the specific modifications requested are not reflected in IBFS in the MOD application but only in an Attachment to the Modification application. Once the Modification application is placed on Accepted for Filing Public Notice, the modifications requested are included in the IBFS data fields.

Class of Earth Station – which of the two classes of earth stations that may qualify for Incumbent status -- Fixed Earth Stations (FES) and Temporary Fixed Earth Stations (TFE).

SiteID – the designation by the Applicant of a particular site for the location of antennas under the specific Callsign.

AntennaID & Quantity – the designation by the Applicant of a particular antenna or antenna type. Often, an AntennaID represents a particular Manufacturer and Model of antenna – information that also is in IBFS. The quantity represents the number of antennas associated with that AntennaID at that site.

Callsign Subject to Lump Sum Election & Intended Action -- identification by Callsign which earth station antennas are subject to an accepted lump sum election and whether the earth station operator intends to migrate the antenna to the upper 200 MHz by the end of the transition or to discontinue use of the C band by that antenna

Site Address and GPS Coordinates – the address and the GPS coordinates of the particular SiteID.
