Appendix	Urban Rates Survey Residential and Single-Line Business Forms

Introduction

This 2008 issue of the *Reference Book* highlights the data collected through the Industry Analysis and Technology Division's annual Urban Rates Survey. The local rate data reflect the inclusion of various taxes and surcharges and, as such, provide an estimate of the monthly charges residential and single-line business customers pay for local telephone service provided by wireline telephone companies. Local rates pertaining to multiline-business customers are no longer reported. Like the previous edition of the Reference Book (2007), this issue primarily focuses on trends in rates, price indices, and expenditures for telephone service. As before, each chapter has a section following the text which informs the reader about the various additional data sources that contain further information on these topics. This report, and previous reports, are also available the Wireline Competition Bureau Statistical **Reports** website on at www.fcc.gov/wcb/stats.

This publication focuses on domestic telecommunications. Those interested in international telecommunications are encouraged to refer to *Trends in the International Telecommunications Industry*, which is also available on the **Wireline Competition Bureau Statistical Reports** Internet site.¹

¹ *Trends in the International Telecommunications Industry* is published by the FCC's International Bureau. Previously, the report was published by the Industry Analysis and Technology Division of the FCC's Wireline Competition Bureau.

Statistical Findings

Rates for Local Service

• The Lifeline universal service program subsidizes the monthly phone charges for lowincome households, while the Link-Up program subsidizes charges for the connection of a phone line. Based on a sample of cities, Lifeline conferred an average monthly benefit of \$14.99, and Link-Up conferred an average benefit of \$30.04.

• The average rate paid by business customers for a single phone line rose from \$45.32 in 2006 to \$48.67 in 2007, an increase of 7.4%. Average connection charges for single-line business customers fell from \$68.96 in 2006 to \$68.74 in 2007, a decrease of 0.32%.

• The average rate paid by residential customers for unlimited touch-tone calling rose to \$25.62 in 2007, an increase of 1.4% from \$25.26 in 2006. The average connection charge for residential customers increased to \$43.22 in 2007 from \$43.13 in 2006, which represents an increase of 0.20%.

Toll Service Rates

• The increased availability and marketing of discount and promotional long distance plans, as well as the popularity of wireless "bucket-of-minutes" plans, has made basic schedule rates obsolete for many long distance customers, particularly business customers and high volume residential consumers. Today wireline, wireless, and cable companies are offering consumers bundled packages of local and long distance service, and buckets of minutes that can be used to call anyone, anywhere, and anytime.

• The average revenue per minute of long distance calling, which reflects rates paid by residential and business consumers, has fallen from 15 cents in 1992, when discount and promotional long distance plans were introduced, to 6 cents in 2006, a decrease of 60%.

• During 2007, the consumer price index for interstate toll service rose 2.4% and the consumer price index for intrastate toll service increased 5.9%, while the overall consumer price index rose 4.1%.

Consumer Expenditures for Telephone Service

• According to Bureau of Labor Statistics (BLS) surveys, average monthly expenditures for telephone service for all U.S. households rose from \$87.33 in 2006 to \$90.58 in 2007, an increase of 3.7%. Telephone service continues to comprise approximately 2% of household expenditures.

• Also, according to BLS surveys, urban households continue to spend more on telephone service than rural households. During 2007, average annual expenditures for urban households were \$1,091, as compared to \$1,038 for rural households.

• According to data provided by TNS Telecoms, a marketing research firm, households with wireline telephone service spent an average total of \$113 per month on telephone services during the year 2007 (compared to \$102 in 2006). Out of that total, households spent \$45 per month on local and long distance service (compared to \$44 in 2006), and \$68 per month on wireless service (compared to \$58 in 2006).

I. Rates

This section focuses on rates for local telephone service provided by wireline telephone companies. The billing structure for local telephone service can be broadly classified as either flat-rate or message/measured service. Customers subscribing to flat-rate service do not pay any additional fees for calls within their local calling area, regardless of the number of calls they place. Alternatively, customers subscribing to message or measured service pay an additional charge for calls made within the local calling area. Message service denotes those plans which bill customers by the call, regardless of the length of the call, while measured service plans bill customers based upon the length of the call. Either plan may also base charges on the distance between the calling and called party. Under either message or measured service, some amount of calling may be included in the monthly basic charge and therefore may be made without additional cost to the customer.

In addition to monthly charges for basic service and calling charges, customers pay a number of other charges for telephone service. The federal subscriber line charge is a line item that local exchange carriers are authorized to charge to recover a portion of the interstate costs of providing local phone service. Some states, such as Michigan, authorize local carriers to charge a state subscriber line charge. In some areas there are additional surcharges that the state telephone regulatory authority has authorized the carrier to charge customers. These surcharges are generally associated with price-cap plans and other regulatory matters that either limit the carrier's local service revenue to reasonable levels, or ensure that the carrier is fully compensated for the cost of providing service. In some states, most notably California, the surcharges change annually and can either add or subtract to the local rates of customers. Charges to fund local number portability, telecommunications relay services, and 911 services also appear on telephone bills in many parts of the country.

The local rate averages presented in this report include subscriber line charges and local number portability surcharges that are tariffed at the FCC. Revenues from these charges are classified as interstate and therefore are included in incumbent local exchange carrier (LEC) universal service contribution bases. Prior to July 2000, the incumbent LECs recovered the cost of universal service contributions through per-minute interstate access charges. In July 2000 the incumbent LECs began recovering this cost through pass-through charges levied on local exchange service customers. These pass-through charges also are included in our calculations of the base rate for local service.

State, county, and municipal governments levy a number of charges on telephone service. For local service, posted rates provide an accurate picture of prices paid by end users. However, the long distance market features a variety of rates for identical or similar services. Residential consumers may choose from a wide variety of distinct discount plans, and many businesses enter into contracts with toll service providers rather than purchasing service at the posted rates. Consequently, basic rates do not necessarily reflect the prices that residential and business consumers actually pay for long distance services. In fact, the vast majority of customers employ discount long distance calling plans and do not pay the basic schedule rate.¹ Numerous incumbent LECs, competitive local exchange carriers (CLECs), and interexchange carriers (IXCs) are now offering bundled packages of local and long-distance voice services, many at discounted rates. In

¹ Bureau of Labor Statistics (BLS) price indices, presented in Section III, provide an alternative measure of long distance prices.

addition, most wireless providers now offer packages that include unlimited minutes or a set number of minutes that may be used for local or long-distance calls.

A. Local Service Rates

The Industry Analysis and Technology Division of the Wireline Competition Bureau conducts an annual survey of incumbent LEC local telephone service rates in 95 urban areas of the United States.² The cities surveyed are those that were included in the BLS Consumer Price Index (CPI) in 1986. In constructing averages and medians, the sample weights derived by the BLS are used. In addition to collecting information on monthly rates for service, the *Urban Rates Survey* collects information on charges paid to have a phone connected to the network and the price of optional inside wire maintenance plans offered by many local exchange carriers.

1. Residential Rates

Table 1.1 presents the national average rates for residential telephone service as of October 15, 2007. The average rate for flat-rate calling with touch-tone service in the 95 cities in the sample was \$25.62. Measured or message service was \$17.29, with an average additional charge of 8 cents for a 5-minute, same-zone, business-day call.

The charge to have a single residential line connected averaged \$43.22 on October 15, 2007. If telephone service is being installed for the first time at a residence, a drop line from the nearest telephone cable must be run to the building and a connection block (network interface device) must be installed. In twenty seven of the sample cities, an additional charge is levied for this work. The nationwide average connection charge would be \$12.65 higher if these charges were included.

In some areas of the country, only one type of service is offered, either flat-rate or measured/message service, and consumers do not have a choice. In order to calculate a national average based upon all of the sample cities, we calculate a "representative rate." The representative rate is the flat-rate service charge in those areas where this type of service was available.³ Table 1.2 presents the national average representative rates from 1986 to 2007. During the twenty-two-year period sample, the average representative rate for residential local service has gone (in nominal terms) from \$17.70 to \$24.80, and average connection charges have dropped from \$49.25 to \$40.20.

 $^{^2}$ In 2003, the form used to conduct the *Urban Rates Survey* was revised. Specifically, a more detailed breakout of carriers' surcharges and taxes now appear as separate line items on the survey instrument. The residential and business survey instruments are included in the attached Appendix. In addition, all carriers are now required to submit all line-item data in terms of dollar amounts, whereas before some line items were reported as percentages. These changes to the survey form allow for more accurate estimates of the total monthly recurring costs for basic local residential and single-line business service. Note that all estimates for 2002 and beyond reflect usage of the revised survey form, estimates for years 2001 and prior reflect those obtained from the previous survey instrument.

³ If flat-rate service was unavailable, the rate for measured/message service was used, along with the charges associated with placing 100 five-minute, same-zone, business-day calls. As of October 15, 2001, flat-rate local residential service was available in all 95 cities, so that approximating the cost of measured/message service with 100 five-minute, same-zone business day calls was unnecessary.

Table 1.3 provides the rates in each of the 95 cities in the *Urban Rates Survey* as of October 15, 2007. Tables 1.4 and 1.5 provide historical monthly residential rates and residential connection charges respectively, for each of the sample cities.

2. Rates for Low-Income Households

Tables 1.1 through 1.5 show the local rates that are available to all customers. Many states, in addition to federal programs, subsidize low-income households' monthly service charges and connection fees. Most of these subsidy programs are part of the FCC's Lifeline and Link-Up programs. The goal of the Lifeline and Link-Up programs is to help achieve universal service by enabling lower-income households to obtain telephone service. Lifeline subsidizes lower-income households' monthly service charges, while Link-Up subsidizes lower-income households' connection charges. In 2007, qualifying households in all of the 95 surveyed cities received Lifeline and Link-Up benefits. Table 1.6 shows the average Lifeline and Link-Up rates in those cities and compares the subsidized rates to the standard rates. In 2007, low-income households on the Lifeline program paid \$10.63 per month for local service, as compared to \$25.62 paid by residential subscribers not on the Lifeline program, for an average saving of \$14.99 per month. Low-income households receiving Link-Up assistance paid \$13.19 for connection charges, as compared to \$43.22 paid by residential subscribers not receiving Link-Up assistance paid \$13.19 for connection charges, as compared to \$43.22 paid by residential subscribers not receiving Link-Up assistance, for an average Link-Up benefit of \$30.04.

Table 1.7 presents the Lifeline and Link-Up rates, as well as the standard rates, in the sample cities as of October 15, 2007.

3. Business Rates

The *Urban Rates Survey* also collects information on charges for single-line business service. Beginning with the 2003 *Urban Rates Survey*, data pertaining to charges for multi-line business services (key systems and private branch exchanges) are no longer collected.

Table 1.8 presents the average monthly rates for flat-rate and measured/message service paid by a business with a single telephone line, as well as the connection charges a business could expect to pay. Table 1.9 calculates the "representative rate," and shows the trend in rates since 1989. Rates for single-line businesses have followed trends similar to those seen with residential rates. Tables 1.10 through 1.12 present current and historical rates for the sample cities.

B. Standard Deviation Analysis of Residential Rates

In October 2003, the Federal Communications Commission adopted a recommendation by the Federal-State Joint Board on Universal Service establishing an annual adjusted nationwide urban rate benchmark for purposes of determining universal service support for non-rural carriers. This benchmark is used by the states and the Commission as a tool to assess the reasonable comparability of rates in rural and high-cost areas served by non-rural carriers to nationwide urban rate.⁴ The urban rate

⁴ See Federal-State Joint Board on Universal Service, CC. Docket No. 96-45, Order on Remand, Further Notice of Proposed Rulemaking, and Memorandum Opinion and Order, 18 FCC Rcd 22559, 22607-22610,

benchmark adopted by the Commission is based upon the most recent average urban residential rate as shown in Table 1.1.

Because of the great variation in urban rates nationwide, the Commission adopted a "standard deviation analysis" which measures the dispersion of urban rates from the average. As such, an urban rate benchmark level of two (weighted) standard deviations above the (weighted) average urban rate is used. Table 1.13 presents the results of such a standard deviation analysis for the residential rates reported in the *Urban Rates Survey* as of October 15, 2007. The average, plus the two standard deviation benchmark, is \$37.36. Table 1.14 shows the historical trend in the standard deviation analysis for the years 1993-2007. Over this period, the average plus the two standard deviation benchmark rose by 31.5%, and presents an increase of 13.1% compared to 2006.

C. Toll Service Rates

Since 1992, carriers have introduced an impressive array of discount and promotional plans, and many long distance residential customers subscribe to these plans. These plans take a variety of formats. Some plans offer a block of calling time for a fixed fee and reduced per minute rates for additional calling while others give volume discounts or discounts for calls to certain phone numbers or area codes. One common trend has been the introduction of flat-rate calling plans, which eliminate the mileage bands associated with traditional basic schedules. For example, Verizon's "Freedom Essentials" plan offers unlimited long-distance and local calling (as well as voice mail, caller ID, and call waiting) for as low as \$42.99 per month (not including add-on charges). In addition, Verizon offers discounts on its high-speed Internet offerings to those subscribers who take the service as part of its "Freedom" plans.

Section 271 of the Telecommunications Act of 1996 allowed the Regional Bell Operating Companies (RBOCs) to provide in-region interLATA toll services once the companies satisfied a fourteen-point "checklist" of conditions which demonstrates that their local exchange markets are open to entry by competitive local exchange carriers. All of the RBOCs attained section 271 approvals for their particular markets, and they are now offering discounted bundled packages of voice and popular calling features.

Wireless companies and prepaid calling cards offer more options for long-distance consumers. Wireless companies now offer packages which enable customers to purchase a set number of minutes of usage per month at a set rate (some with unlimited minutes or unlimited nights and weekends) and allow customers to use these minutes for local or long distance calling. Consumers may also purchase prepaid calling cards, which contain an allotted number of minutes, with some charging rates less than three cents per minute.

paras. 80-82 (2003), remanded, Qwest Communications Int'l, Inc. v. FCC, 398 F.3d 1222 (10th Cir. 2005); Federal-State Joint Board on Universal Service, CC. Docket No. 96-45, Notice of Proposed Rulemaking, 20 FCC Rcd 19731 (2005).

Using revenue per-minute data for both residential and business interstate toll traffic, Table 1.15 illustrates the downward trend in long distance rates since discount long distance plans were introduced in 1992. The carriers' average revenue per interstate toll minute has fallen by 60% since 1992, demonstrating that the advent of discount long distance plans has produced lower rates for both business and residential consumers.

D. Additional Sources of Information on Local and Toll Rates

1. Local Rates

A few states have begun to place exchange service tariffs on the Internet. The National Association of Regulatory Utility Commissioners (NARUC) web site has links to the web sites of all of the state telecommunications regulatory agencies: www.naruc.org.

The Bureau of Labor Statistics (BLS), part of the U.S. Department of Labor, publishes a number of price indices that follow trends in local telephone rates. Part III of this report reviews these indices. The most current figures can be obtained at <u>www.bls.gov</u>.

2. Toll Rates

Up until August 2001, all interstate interexchange carriers were required to file tariffs setting forth their rates with the FCC. These filings were available for public inspection at the FCC's Reference Information Center, Washington, DC. As of August 1, 2001, interstate carriers were no longer required to file tariffs setting forth their interstate long distance rates. Since that date, carriers are required to post their rates on their websites.

The BLS publishes a number of price indices that follow trends in toll rates. Part III of this report reviews these indices. The most current figures can be obtained at <u>www.stats.bls.gov</u>.

Finally, there are a number of firms that specialize in monitoring major long distance companies and their rates, and many of these firms maintain Internet sites. Some examples are Abtolls.com, a free directory service guide to long distance carriers and their rates; Telecommunications Research and Action Center, which uses a search engine to find the lowest long distance rates for any selected calling pattern; *Phone Bill Busters*, which lists discount long distance plans and uses a search engine to find the lowest long distance rates for any selected calling pattern; *Phone Bill Busters*, an Internet newsletter which offers a "free multi-carrier cost comparison service". One can access these services on the Internet at <u>www.abtolls.com</u>, <u>www.trac.org</u>, <u>www.phone-bill-busters.com</u>, and <u>www.thedigest.com</u>.

³ Subject to revision.

Table 1.6 Comparison of Standard Local Telephone Rates to Lifeline and Link-Up Rates (As of October 15, 2007)

	Standard Rate in Cities with Subsidy Plan (a)	Subsidy-Plan Rate (b)	Benefit (a) - (b)
Representative Monthly Charge ¹	\$15.62	\$8.70	\$6.92
Federal and State Subscriber Line Charges	5.74	0.02	5.72
Taxes, 911 and Other Charges	4.26	1.91	2.35
Total Monthly Charge ²	\$25.62	\$10.63	\$14.99
Basic Connection Charge	\$39.81	\$12.33	\$27.48
Taxes	3.41	0.86	2.56
Total Connection Charge ²	\$43.22	\$13.19	\$30.04

Note: Details may not add to totals due to rounding.

¹ All standard rates reflect flat-rate service. Subsidy plan rates reflect flat-rate subsidized service where available and subsidized measured/message service with 100 calls elsewhere.

² Averages are for the 95 cities with subsidized monthly rates and connection assistance plans.

¹ Revised.

² Subject to revision.

³ Rates are based on flat-rate service where available and measured/message service with 200 five-minute, same-zone, business-day calls elsewhere.

⁴ Starting in 2002, additional monthly charges for touch-tone service are included in the monthly charge.

II. Expenditures on Telephone Service

A. Residential Expenditures

The Bureau of Labor Statistics (BLS) conducts surveys of consumer expenditures, in part, to develop weights for the consumer price indices. The surveys collect income, expenditure, and demographic information for "consumer units." Consumer units are often referred to as households, but the definition is not identical to households, as defined by the Census Bureau.¹ For instance, there were approximately 118.8 million consumer units in 2006, compared with approximately 114.3 million households. The BLS uses two types of surveys: diary surveys, where household members record most types of purchases for a few weeks; and interview surveys, where households are interviewed to determine their expenditures for the prior three months. Households selected for the interview survey are interviewed in five successive quarters. Tables 2.1 through 2.5 present the annual average total expenditures and telephone expenditures by various demographic classifications.

Prior to 1984, the BLS published separate expenditure estimates based on the diary and the interview surveys. At that time, telephone expenditures were collected only through the interview surveys, and average levels of telephone expenditures were published only in the interview summaries. The BLS began publishing integrated estimates in 1984, combining information from both types of surveys.

Expenditure data were not collected for rural households for 1980 through 1983. Nationwide expenditure data for rural households are available for 1984 through 2004. According to the BLS, more than 85 percent of households are in urban areas, and the estimates of telephone expenditures by urban households are similar to estimates for nationwide average telephone expenditures. Nonetheless, 1980 through 1983 nationwide data are not completely comparable with subsequent data.

Several changes in the telephone industry make it difficult to interpret changes in the BLS estimates of household expenditures for telephone service. Prior to 1983, most residential telephones were leased from local exchange carriers. As a consequence of the FCC's Computer Inquiry II proceeding, telephone sets were detariffed on January 1, 1984. Existing tariffed equipment became known as "embedded rate base" and much of this equipment was sold "in place" to consumers. Significant amounts of equipment purchases were included on local telephone bills in 1983 and 1984. Telephone bills have not included significant amounts of equipment sales since that time. The remaining Bell System embedded rate base was transferred to AT&T in 1984, but the lease payments were included in local telephone bills into 1987.

The BLS has changed the consumer expenditure survey questionnaires to reflect changes in the equipment market. Beginning in 1982, the survey specifically included telephones and accessories in its list of home furnishings and related household items. Amounts appearing on the telephone bills, however, were included as telephone service until 1986. Thus, the 1983 and 1984 estimates include the sale of the embedded base. The current questionnaire separates equipment sales from other items that appear on telephone bills. The questionnaire does not specifically address payments for leasing telephone equipment, commonly known as customer premises equipment (CPE). CPE lease payments may still be reported as telephone service expenditures.

¹ We also refer to consumer units as "households."

The consumer expenditure survey continues to classify payments for inside wiring maintenance as part of telephone service. This probably accounts for between \$10 to \$20 of average annual household telephone expenditures. Beginning in 1991, consumers have been asked to separately identify cellular telephone payments. The BLS has not yet published a separate estimate for cellular telephone expenditures, but instead continues to include these with other telephone expenditures.

Table 2.6 presents estimates of monthly household telecommunications expenditure by the type of service provider. This table is derived from Bill Harvesting® data collected by TNS Telecoms, which provides information on actual usage in the residential telecom market as collected from the actual telecommunications bills of households. TNS Telecoms, a telecommunications market information firm, conducts nationwide surveys and Bill Harvesting® on a quarterly basis from over 120,000 households each year. The company has donated databases to the Commission containing information on residential phone usage.

B. Business Expenditures

One of the few sources of information on expenditures for telecommunications services by businesses is contained in the input-output (I-O) accounts of the U.S. economy as published by the U.S. Bureau of Economic Analysis (BEA). The BEA I-O accounts show how industries provide input to, and use output from, each account to produce estimates of Gross Domestic Product (GDP). Note that the BEA's I-O accounts data were once based on Standard Industrial Classification (SIC) industry definitions and released only once every five years in accordance with the U.S. Census Bureau's economic censuses.² The U.S. Census Bureau has since replaced SIC industries with those defined according to the 1997 North American Industry Classification System (NAICS). In accordance with this change, the BEA now releases I-O accounts data on an annual basis for NAICS industries. Detailed definitions of NAICS industries are available at www.census.gov/epcd/www/naicstab.htm.

Table 2.7 shows the most recent I-O account of the use of broadcasting and telecommunications commodities by U.S. industry. Table 2.8 presents the most recent account of the commodities used by the U.S. broadcasting and telecommunications industry. The underlying data presented in these tables is available at: http://www.bea.gov/industry/xls/Annual IOMakeUse After Redefinitions 98-06.xls.

C. Additional Sources of Information on Expenditures for Telephone Service

Additional information from the *Consumer Expenditure Survey* is available from the Bureau of Labor Statistics at www.bls.gov/cex/.

TNS Telecoms has donated databases to the Commission containing information on residential phone usage collected from actual consumer telecommunications bills. TNS Telecoms has granted the Commission permission to use these databases for industry research purposes and to publish the industry level results. TNS Telecoms has been monitoring the telecommunications market since 1995 through both the ReQuest®

² See, e.g., Tables 2.7 and 2.8 of the 2005 edition of the *Reference Book*.

consumer survey and Bill Harvesting® in the residential market and the BusinessWave® business survey in the business market. Table 2.6 comes from these databases. For additional information visit <u>www.tnstelecoms.com</u> or contact them at 1-866-811-TNST or by e- mail at <u>contact@tnstelecoms.com</u>. Their address is 101 Greenwood Ave, Suite 502, Jenkintown, PA 19046.

Additional information on the input-output accounts of the U.S. economy is available from the Bureau of Economic Analysis at <u>www.bea.gov</u> on the Internet.

Concordance between I-O industry codes and 1987 SIC codes can be found in Appendix A of Benchmark Input-Output Accounts for the U.S. Economy, 1997 in *Survey of Current Business*, November, 1997. Information concerning the conversion from 1987 SIC codes to NAICS codes can be found at <u>www.census.gov/epcd/naics02/</u>.

The Bureau of the Census publishes the *Service Annual Survey* that also provides some estimates of household and business expenditures on telephone service. This information can be found at <u>www.census.gov</u> on the Internet.

Average Monthly Household Telecommunications Expenditures by Type of Provider*

Source: Calculated by Industry Analysis and Technology Division staff using survey data from TNS Telecoms *ReQuest Market Monitor* TM, Bill Harvesting®.

Note: These data are average monthly *expenditures* based on sample data for those households with wireline telephone service. These data do *not* reflect average monthly *bills*. For example, the average household in the sample spent \$41 per month for wireless service in 2003. This average was calculated by simply dividing the total wireless expenditures of households in the sample by the total number of households in the sample. Of course, a number of households in the sample did not take wireless service in 2003 and therefore paid nothing. The average monthly bill for wireless service for 2003 - averaged over only those households that received a bill - was therefore much higher, about \$62. In addition, these data are only representative of telecommunications revenues from servicing residential *end-users*, and do not reflect any revenues received from servicing business customers or other *carriers*.

* Excludes households in Alaska and Hawaii.

III. Price Indices

The BLS calculates telephone service price indices as part of two major programs. The Consumer Price Index (CPI) program publishes indices based on the amount of money that residential customers in urban areas pay for telephone service. The Producer Price Index (PPI) program publishes indices based on the amount of money that companies receive for providing telephone service. Unlike the CPI, the PPI indices cover business as well as residential telephone service.

A. Consumer Price Indices

The Consumer Price Index is the nation's most widely recognized measure of retail price changes. It is published monthly by the BLS, and measures the prices all urban consumers pay for most goods and services. BLS defines urban areas as Metropolitan Statistical Areas (MSAs) and small cities with populations greater than 10,000. According to BLS, over 79 percent of the U.S. population lives in urban areas.

The BLS has published an index for telephone services since 1935. In 1978 it began publishing an index for local telephone service, interstate toll service, and intrastate toll service. In 1998 it added an index for cellular telephone services. At that time, the BLS also revised the telephone services index to include information from the cellular index and created an aggregate index by combining the interstate and intrastate toll service indices into an index for long distance services. Telephone service price changes are also included in the CPI index for all goods and services, as well as in other broad indices. According to the BLS, as of the end of December 2006, telephone prices accounted for roughly 2.2% of the CPI for all goods and services.¹

Table 3.1 shows the annual changes in the CPI indices since 1980. In addition to showing the nominal changes in telephone prices, the table shows the changes in telephone prices after adjusting for the impact of inflation, as measured by the CPI for all goods and services. Chart 1 illustrates the changes in toll rates since the AT&T divestiture in 1984; since then, rates for both interstate and intrastate toll calls have fallen. Chart 2 adjusts the price indices for interstate and intrastate toll service for the impacts of inflation. Relative to the prices of other goods and services, long distance rates have fallen substantially since the AT&T divestiture in 1984.

Table 3.2 shows three monthly consumer price indices that were first published in 1998. A long distance service index has been created using the existing information collected for the interstate and intrastate toll indices. An index for cellular telephone service has been created and the previous "telephone services" index has been replaced with a new measure that includes the cellular price index. Since the previous index for telephone services did not include cellular services, the two series are not strictly comparable. Users should exercise caution because current price trends in the cellular market deviate significantly from those in the wireline telephony market.

¹ See <u>http://www.bls.gov/cpi/cpiri2006.pdf</u>.

B. Producer Price Indices

The PPI is a statistical series established by the BLS to measure changes in the prices charged by producers. This index, formerly known as the Wholesale Price Index, was first published in 1902. The BLS began publishing indices for telecommunications products in 1972. These indices were wholly redesigned in mid-1995. Consequently, the current indices are not comparable to indices prior to 1995. In addition to 39 current indices of telecommunications products, the BLS publishes overall indices by stage of processing -- finished goods, intermediate goods, and crude materials for further processing.

With the release of data for January 2004, the Producer Price Index program changed its basis for industry classification from the 1987 Standard Industrial Classification (SIC) system to the North American Industry Classification System (NAICS). Developed in cooperation with Canada and Mexico, NAICS represents a profound change for statistical programs focusing on emerging economic activities. The system was developed using a production-oriented conceptual framework, grouping establishments into industries based on the activity in which they are primarily engaged. While many NAICS industries directly compare with SIC industries, a number of SIC industries were split or combined to form a new NAICS industry. The PPI treats the SIC-to-NAIC comparison as continuous if 80 percent or more of the weight of the SIC-based index comprises at least 80 percent of the weight of the NAICS structure using the index base date and price index history established by the SIC-based index. Documentation of the NAICS to SIC concordance for all subsectors, industry groups, and products may be found at <u>http:// www.bls.gov/ppi/ppinaics.htm</u>.²

Since the PPI indexes the prices received by producers, it includes the prices paid by businesses as well as consumers. The PPI does not include taxes or other government surcharges. Additionally, it is subject to substantial fluctuations from month to month and each index is revised four months following its release. Consequently, analysts should use caution when using the PPI to measure short-run trends in telecommunications prices. It is suggested that users consider constructing a three to four month moving average of the series to improve the analysis of trends. Table 3.3 presents the monthly PPI indices for the period since January 2000. Certain Producer Price Index categories were discontinued in 1995. These PPIs may be found at http://www.bls.gov.

C. Additional Sources of Information on Price Indices

The BLS maintains current and complete access to all of the price indices at <u>stats.bls.gov</u> on the Internet. Visitors can find documentation on the construction of the indices there as well.

² Several telecommunications PPIs published by the BLS under the SIC classification system are no longer published after the conversion to NAICS. These include "Other Local Service" (SIC pcu4813#114), "Other Local Service except Directory Assistance" (SIC pcu4813#11409), "LEC Intrastate Private Line Service" (SIC pcu4813#311), "Directory Advertising" (SIC pcu4813#91), and "Other Telephone Services" (SIC pcu4813#99). In addition, "Directory Assistance" (SIC pcu4813#11401) is now classified as "Other Local Service" (NAICS 517110114) and "Telephone Communications except Radiotelephone" is now referred to as "Wired Telecommunications Carriers".
