

INTERNATIONAL BUREAU

REPORT

2007 Section 43.82 Circuit Status Data

March 2009

Cathy Hsu

Policy Division

2007 Section 43.82 Circuit Status Data

This report contains information on U.S.-international facilities-based common carriers' circuits as of year-end 2007 that was submitted to the Federal Communications Commission (Commission) by U.S. common carriers pursuant to section 43.82 of the Commission's rules.¹ In addition to the 2007 data, for comparison purposes, this report includes data from previous reports covering 2004 through 2006.²

Reporting Requirements

Section 43.82 of the Commission's rules requires U.S.-international facilities-based common carriers to file an international circuit status report by March 31 each year for circuits used to provide international services as of December 31 of the preceding year.³ (Non-common carriers are not required by section 43.82 to report their circuits.)⁴ The detailed filing requirements are set forth in the *Manual for Filing Section 43.82 Circuit Status Data*, which is available on the Commission's Web site at <http://www.fcc.gov/ib/pd/pf/csmanual.html>.

This report summarizes the Commission staff review and analysis of the information provided to the Commission by carriers pursuant to Section 43.82.⁵ Some carriers request confidential treatment of information submitted. The information in this report is presented in aggregated form for public use. This information filed by each carrier also serves as a database for determining and monitoring the payments that the Commission is required to collect (*i.e.*, annual regulatory fees on active 64 Kbps-equivalent international circuits).

All U.S.-international facilities-based common carriers are required to file circuit status information showing both activated (in-service) and idle (available but not in-service) capacity. Although carriers measure units of circuit capacity at E-1⁶ and STM-1⁷ levels, all services are

¹ 47 C.F.R. § 43.82.

² Information for 1995–2003 is available in our previous reports, at <http://www.fcc.gov/ib/pd/pf/csmanual.html>.

³ International facilities-based circuits are “international circuits in which a carrier has an ownership interest that includes outright ownership, indefeasible right of use (IRU) interests, or leasehold interest in capacity in an international facility, regardless of whether the underlying facility is a common or non-common carrier submarine cable or a satellite system.”

⁴ The staff believes that a substantial amount of capacity is provided on a non-common carrier basis. Consequently, it is noted that the capacity reported here should not be interpreted as representing the total capacity used to provide international services.

⁵ The staff reviews the carriers' submissions for accuracy and completion. Some carriers filed revised data based on requests for clarification from the staff. Others filed revisions on their own. Some carriers did not file their initial submissions until substantially after the filing date.

⁶ 1 E-1 = 30 64 Kbps circuits.

⁷ 1 STM-1 = 1,890 64 Kbps circuits.

reported in 64 Kbps-equivalent circuits, the minimum measurable unit to accommodate carriers that have low traffic volumes and therefore cannot report by large capacity units with respect to any particular country. Carriers also measure bandwidth of international transmission capacity at substantially higher levels (*i.e.*, gigabits per second (Gbps) and terabits (Tbps)). In Table 7 (a supplemental table which shows capacity data for trans-oceanic fiber optic cables that is not filed by cable operators for purposes of section 43.82, but is included in this report for reference purposes) we have stated the cable capacity in 2007-2010 in Gbps as well as 64 Kbps circuit units to reflect industry convention. We used the following standard conversion ratio: 1 Gbps = 12,096 64 Kbps circuits.

Data Presentation

The services covered by this report include International Message Telephone Service (IMTS) (switched voice), International Private Line Service (IPLS) (including voice and data) and Miscellaneous or Other International Services (including data services other than private line service) provided on a common carrier basis. The aggregated data listed in this report reflects all of the submitted information, including information from carriers requesting confidential treatment.

This report uses the following regional codes outlined in the *International Points Report*:⁸

<i>Region</i>	<i>Code</i>
Western Europe	1
Africa	2
Middle East	3
Caribbean	4
North and Central America	5
South America	6
Asia	7
Oceania	8
Eastern Europe	9
International Water Area	10

This report is organized as follows:

- Table 1 lists the 100 carriers that filed circuit status reports. Of these, 85 carriers reported

⁸ See *Wireline Competition Bureau Industry Analysis and Technology Division report titled International Points Used for FCC Reporting Purposes (International Points Report)*, available at <http://www.fcc.gov/wcb/iatd/intl.html>.

active or idle capacity in 2007. The remaining 15 carriers did not report any active or idle capacity in 2007.

- Tables 2 through 5 present data from 2004 through 2007 for different categories of transmission facilities: Table 2 (data on undersea cable circuits); Table 3 (data on satellite circuits); Table 4 (data on terrestrial circuits);⁹ and Table 5 (data on combined transmission circuits (IMTS, Private Lines, and Other International Services), as well as the percentage of circuits by service type for each region, from 2004 to 2007). These tables include information organized by service type for 2004, 2005, 2006 and 2007 data.
 - Table 2 shows that undersea cable circuits accounted for 86.9 percent of the overall active transmission capacity in 2007.
 - Table 3 shows that international satellite circuits accounted for 0.2 percent of overall transmission capacity.¹⁰
 - Table 4 shows that terrestrial links accounted for 12.9 percent of active circuit capacity in 2007.
 - Table 5 shows that, for 2007, IMTS circuits accounted for 9.1 percent of the total active capacity. The combined growth rate for Private Line and “Other” (data) services was 12 percent in 2007.
 - Table 6 shows the top 30 destinations by circuits. In 2007, the top 30 destinations accounted for 97 percent of the total U.S.-activated circuits at year-end 2007, with the United Kingdom, Canada, Japan, Denmark, and Germany as the top five destinations. Mexico fell to sixth. Four Caribbean destinations – U.S. Virgin Islands, Saint Lucia, British Virgin Islands, and Saint Kitts and Nevis – replaced Argentina and three European countries (Spain, Belgium, and Sweden) in Table 6 in 2007.

Supplementary Data

Table 7 lists all operational and planned new trans-oceanic fiber optic cables, both common carrier and non-common carrier cables, in 64 Kbps units from 1995 to 2010 (and in Gbps from 2007 to 2010), as derived from cable landing license applications and updated capacity information from cable operators.¹¹ In 2007, U.S. carriers reported active and idle circuits for

⁹ Terrestrial circuits include circuits carried both by microwave facilities and by terrestrial cables. Terrestrial circuits do not include circuits carried by undersea cables.

¹⁰ The satellite data understates the actual amount of satellite capacity in use because non-common carrier (private) satellite operators market their capacity directly to end-users on a non-common carrier basis and thus are not subject to reporting requirements under section 43.82.

¹¹ See Table 7, page 32-33. This year, we updated the capacity for all cables based on information provided by the cable operators, including jointly-owned common carrier cables. AT&T provided updated information on the capacity for the jointly-owned common carrier cables which it operates. It restated those capacities to include “unprotected” circuits (that is, calculating capacity by including all protection pairs or back-up circuits). We used

the trans-Atlantic region (regions 1, 2, 3, and 9) that was a 6.8 percent decrease from the circuits reported in 2006. The reported trans-Atlantic region circuits for 2007 accounted for 9.4 percent of the total available cable capacity. In the Americas region (regions 4, 5, and 6), the reported active and idle cable capacity accounted for 18.8 percent of the total available cable capacity. In the trans-Pacific region (regions 7 and 8), the reported active and idle cable capacity accounted for 7.1 percent of the total available cable capacity. The reported activated circuits as a percentage of total available circuits for the three regions (*i.e.*, trans-Atlantic, Americas, and trans-Pacific regions) are also included in Table 7. Overall, the total reported active circuits accounted for 5.4 percent of total available U.S.-bounded capacity in all three Ocean regions.

Data for 2007 shows a pattern that is similar to previous years: the overall reported cable capacity accounted for 9.6 percent of the total available cable capacity (common carrier and non-common carrier cables as reflected in Table 7). Cable capacity reported pursuant to Section 43.82 (activated and idle circuits) understates the actual amount of capacity that is in use. In our previous reports, we identified three reasons for the discrepancy between reported capacity (activated plus idle circuits) and available capacity. They continue to apply. First, foreign carriers hold significant amounts of U.S.-international cable capacity and are not required to report their capacity under section 43.82 unless they use their capacity for the provision of U.S. international service. Second, for any new cable system, a substantial amount of capacity that is actually activated or idle may be underreported, particularly in the year in which many new cables come on-line or old cables are upgraded. Third, much of the capacity on non-common carrier cables is sold to end-users, including Internet Service Providers (ISPs), foreign carriers and foreign ISPs. Under those circumstances, neither cable owners nor cable users are required to report capacities under Section 43.82.

this updated information to restate the capacity for those cables for this year as well as previous years. We also restated the capacity on the PC-1 cable using the “unprotected” circuits since in our previous reports we used “protected” circuits for PC-1.

* Some carriers use terrestrial circuits to transport their traffic to Canada, and satellite circuits to send their traffic to a final destination other than Canada. To avoid double counting, a carrier is required to report its initial facility used for each international point traffic; therefore, this table reports as "terrestrial" some circuits between the United States and countries that are not actually reached by terrestrial links (through microwave or terrestrial cables) from the United States.

(11) Non-Common Carrier Cables as % of total capacity = (5)/(4)		27.8%	15.0%	28.7%	38.8%	68.8%	78.5%	92.5%	92.9%	87.8%	89.8%	91.3%	91.8%	93.2%	93.5%	94.0%	94.7%					

* Cable capacity has been revised for prior years to include "unprotected" circuits to be consistent with other cables. The "unprotected" circuit count is capacity consisting of all protection pairs or backup circuits. Circuit counts for some small cables were miscalculated for prior years in previous reports.

** Class : "C" = Common Carrier Cable, "NC" = Non-Common Carrier Cable.

See <http://www.southerncrosscables.com>

Conversion Ratio Used:

1 T-1 Circuit = 24 64 Kbps Circuits

1 E-1 Circuit = 30 64 Kbps Circuits

DS-3 Circuit = 630 64 Kbps Circuits

1 STM Circuit = 3 DS-3 = 63 E-1s = 1890 64 Kbps Circuits

5 Gbps = 2,016 E-1s = 60,480 64 Kbps

10 Gbps = OC 192 = 4,032 E-1s = 120,960 64 Kbps Circuits

+ Estimates include proposed upgrades to existing cables and proposed new cables.
