The Honorable Tom Wheeler
Chairman
Federal Communications Commission
445 12th Street, SW
Washington, DC 20536

Dear Chairman Wheeler:

Broadband Internet access has become an essential part of the economic and social fabric in many rural Indiana communities as a tool to build businesses, apply for jobs, enhance educational opportunities and connect to friends and relatives. With robust broadband service, even a small town can rely on its residents' talent and determination to compete with the world. Without it, the same community risks being left behind in today's technology-centric economy. In a rural district, such as mine, I want to ensure that counties such as Greene and Sullivan have the same high-quality access as Vanderburgh and Vigo.

Phase II of the Connect America Fund ("CAF II") offers a tremendous opportunity to bring quicker, fiber-fed broadband connections to millions of Americans who wouldn't otherwise receive these benefits. Thanks to the Commission's well-publicized efforts, thousands of rural communities are now counting on CAF II. CAF II represents the final phase of Universal Service reform for these areas, and will determine, for years to come, whether millions of rural residents will have a broadband connection or not. Also, the June 10 Further NPRM has raised additional hopes by significantly increasing the promised download speeds from 4 Mbps to 10 Mbps.

I want to emphasize how important it is to ensure that the final details of CAF II live up to its promise. I am concerned that if the Commission more than doubles the speed requirements without allowing the appropriate level of flexibility in other areas of CAF II, the program's overall mission could be jeopardized.

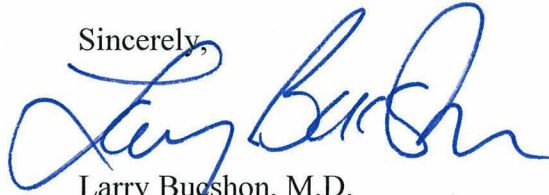

While I have concerns, the June 10 FNPRM identifies a number of constructive ideas that could help achieve the speedier network goals without exceeding the CAF II annual budget. First, the CAF II funding period must be extended from the current five years to 10 years to allow adequate time for the construction of the higher-capacity network. Next, the Commission must use the same 10 Mbps standard when identifying broadband availability from competitors, or communities with just 4 Mbps will be left behind. The Commission also must establish network build-out parameters consistent with the goal of providing quality broadband service to as many people as possible within CAF's limited funding framework. As such, providers must

be given the flexibility to substitute extremely high cost locations with unserved locations in partially served census blocks.

I also encourage you to be as precise as possible when targeting support to areas where broadband would not otherwise be available. In the "interim" CAF I phases, an entire census block could be disqualified if a competitive carrier claimed to serve even a small fraction of its customers, and many areas were disqualified based on the untested assertions of wireless ISPs with line of sight and capacity issues that made them a poor substitute for fiber-fed networks. Now that we are in the final phase, I hope the CAF II standards can reach those unserved customers, and also require competitive carriers to meet a reasonable standard of verification before depriving a community of CAF II support.

I still hear from constituents seeking assistance to bring broadband service to their homes, despite years of federal efforts to overcome the digital divide. The concerns they raise are a reminder of how challenging rural broadband policy can be, but also how important it is. Thank you for considering my concerns, and I look forward to working with you.

Sincerely,

A handwritten signature in blue ink, appearing to read "Larry Bucshon".

Larry Bucshon, M.D.
Member of Congress
