RADIO DIVISION

RADIO SERVICE BULLETIN

ISSUED MONTHLY

Washington, June 30, 1932—No. 183

CONTENTS

	Page		Page
Additions	2	Miscellaneous—Continued.	
Alterations and corrections	8	Changes in Canadian stations transmitting	14
Miscellaneous:		weather reports and other services.	
Changes in the list of vessels equipped with		Changes in Bermuda, St. George (VRT)	14
a radio compass		station.	
New international list of call signals available	13	Frequency measurements of broadcasting	
Change in law governing issuance of radio operators' licenses	14	stations during May.	14
	14	Graphical determination of polar patterns	
		of direction antenna systems.	18

ABBREVIATIONS AND SYMBOLS

The necessary corrections to the List of Commercial and Government Radio Stations of the United States and to the International Lists of Radio Stations appearing in this bulletin under the heading Alterations and Corrections, are published after the stations affected in the following order:

Name	= Name of station.
Loc.	= Geographical location: W = west longitude, N = north latitude, S = south latitude, E = east longitude.
Call	= Call signal (letters) assigned.
Type	= Type of wave classified as follows: <i>A1</i> = continuous wave (tube), <i>A</i> arc = continuous wave, <i>A2</i> = interrupted continuous wave, <i>A3</i> = phone, <i>B</i> = spark.
Fy.	= Frequency in kilocycles; normal frequency in italics; wave length in meters in parenthesis.
Power	= Height (meters) of antenna and intensity of current (meter-amperes) at its base (sample of manner in which published—100/100) or the normal radiated power expressed in meter-amperes (sample of manner in which published—100m amp.).
Service	= Nature of service maintained: PG = general public (ship to shore), PR = limited public (limited to public correspondence between fixed stations), P = private (limited commercial and special), O = Government business exclusively.
Class	= FX = fixed station (point-to-point service); RG = radio-compass station, FA = aeronaautical station, AB = aviation beacon, RF = circular radiobeacon, B = ship station, FC = coast station, A = aircraft, PO = police, GO = geophysical.
Hours	= Hours of operation: N = continuous service, X = no regular hour, Y = sunrise to sunset.
Accts.	= Message accounts settled by.
M. R. T. Co.	= Mackay Radio & Telegraph Co.
R. C. A.	= Radio Corporation of America.
R. M. C. A.	= Radiomarine Corporation of America.
T. R. T. Co.	= Tropical Radio Telegraph Co.
C. w.	= Continuous wave.
I. c. w.	= Interrupted continuous wave.
A. C.	= Alternating current.
V. t.	= Vacuum tube.
M. A.	= Meter-amperes.
U. S. L.	= Applies only to the list of Commercial and Government Radio Stations of the United States.
△	= Equipped with a radio compass (direction finder).

Frequencies for which ship stations are licensed to use are indicated in this publication as specified in the tables (classes L and H) hereunder.

For telegraph communication primarily with coastal telegraph stations: Class L (kilocycles-meters in parentheses, followed by symbol designating type of emission)=

143 (2,100), A-1, primarily for calling.	400 (750), A-1, A-2, working (other than Great Lakes).
152 (1,975), A-1, A-2, working (other than Great Lakes).	410 (730), A-1, A-2, B, working (other than Great Lakes).
153 (1,960), A-1, A-2, working.	410 (730), A-1, A-2, B, calling and distress (Great Lakes only).
164 (1,950), A-1, A-2, working.	425 (705), A-1, A-2, B, working.
155 (1,935), A-1, A-2, working.	464 (660), A-1, A-2, B, working (other than Great Lakes).
156 (1,925), A-1, A-2, working.	468 (640), A-1, A-2, working (other than Great Lakes).
157 (1,910), A-1, A-2, working.	500 (600), A-1, A-2, B, calling and distress (other than Great Lakes).
158 (1,900), A-1, A-2, working (other than Great Lakes).	
160 (1,875), A-1, A-2, working (other than Great Lakes).	
375 (800), A-1, A-2, B, direction finding only.	
394 (760), A-1, A-2, working (Great Lakes only).	

RADIO SERVICE BULLETIN

In addition to the frequencies designated hereinabove, this station may transmit on a frequency below 550 kc (545) used by a coastal telegraph station when directed to do so by the coastal telegraph station to which the frequency is assigned, provided that on frequencies below 150 kc (2,000) the emission shall be A-1 only.

Class H (kilocycles-meters in parentheses, on the following frequencies above 3,000 kc with A-1 or A-2 emission)=

5,105 (96.62)	5,530 (54.25)	8,260 (36.32)	12,360 (24.27)	16,580 (18.004)
5,115 (96.31)	6,170 (48.62)	*8,280 (36.23)	12,375 (24.24)	16,660 (18.007)
	6,180 (48.54)	8,300 (36.14)	*12,380 (24.21)	16,680 (17.986)
*4,140 (72.46)	6,190 (48.47)	8,320 (36.06)	12,420 (24.15)	
4,145 (72.38)	6,200 (48.39)	8,330 (36.01)	12,435 (24.13)	22,025 (13.621)
4,150 (72.29)	6,210 (48.31)		12,450 (24.11)	22,050 (13.606)
4,160 (72.12)	6,220 (48.23)	11,025 (27.21)	16,460 (18.226)	*22,080 (13.587)
4,165 (72.03)	6,230 (48.15)	*11,040 (27.17)	16,480 (18.204)	22,125 (13.559)
5,515 (54.40)		11,055 (27.136)	16,500 (18.182)	
*5,520 (54.35)	8,240 (36.41)	11,070 (27.10)	16,520 (18.160)	
5,525 (54.30)	8,250 (36.36)	11,085 (27.065)	*16,550 (18.116)	

In addition to the frequencies hereinabove designated this station may transmit on a frequency above 3,000 kc (100) used by a coastal telegraph station when directed to do so by the coastal telegraph station to which the frequency is assigned.

For telephone communications primarily with coastal telephone stations, for telephone or telegraph communication with coastal harbor stations, and for telephone or telegraph communication primarily between ship-harbor station, the specific frequency or frequencies for which a station is licensed to use will be indicated.

ADDITIONS

Commercial land stations, alphabetically, by names of stations

[Additions to the List of Commercial and Government Radio Stations of the United States, edition of June 30, 1931, and to the International List of Fixed and Land Stations, published by the Berne Bureau]

Station	Class	Call sign	Frequency in kilocycles, meters in parentheses	Serv- ice	Hours	Licensee
Baton Rouge, La. ¹ ...	FX	WPEQ	1,574 (190.6)-----	P	N	Louisiana State Bureau of Identification and Investigation.
Beaumont, Calif. (near). ²	FA	KGTV	3,232.5 (92.8), 3,242.5 (92.52), 3,257.5 (92.09), 3,447.5 (87.02), 3,457.5 (86.77), 3,467.5 (86.52), 3,485 (86.08), 5,602.5 (63.55), 5,612.5 (53.45), 5,632.5 (53.26).	P	X	Aeronautical Radio (Inc.).
Big Port, Walter, Alaska. ³	FX	KIDY	178 (1,686), 227 (1,320), 268 (1,120), 3,190 (94).	PR	X	Port Walter Herring & Packing Co.

OHIO: West Dover W8XJ.—Fy., 2,398 (125.1), 3,492.5 (35.9), 4,797.5 (62.53), 6,425 (46.69) only.

WEST VIRGINIA: Morgantown W8XAW.—Change class of station to portable.

RELAY BROADCASTING STATIONS, ALPHABETICALLY, BY NAMES OF STATIONS

[Alterations and corrections to be made to the List of Commercial and Government Radio Stations of the United States, edition of June 30, 1931]

NEW YORK: Jamaica (near), W2XE.—Read Wayne, N. J. (near); fy., add 11,830 (25.36), 15,270 (19.65).

MISCELLANEOUS

CHANGES IN THE LIST OF VESSELS EQUIPPED WITH A RADIO COMPASS

[Additions to the lists published in Commercial and Government Radio Stations of the United States, edition June 30, 1931, and to the International List of Ships Stations published by the Berne bureau]

Name	Call sign	Owner
COMMERCIAL		
Acadia.....	WHES	Eastern S. S. Lines (Inc.).
Commercial Bostonian.....	KEPM	Moore Mack Gulf Lines (Inc.).
Commercial Floridian.....	KUGN	Do.
Commercial Quaker.....	KUGM	Do.
Hilda.....	KGCK	Caddo Co. (Inc.).

NEW INTERNATIONAL LIST OF CALL SIGNALS AVAILABLE

The International Bureau of the Telegraph Union, Radiotelegraph Service, Berne, Switzerland, now has available for distribution to the public the third edition of the Alphabetical List of Call Signals of Fixed, Land, and Mobile Radio Stations, at \$1.41 for the edition on ordinary paper, paper cover, without index (type A), and at \$1.93 for the edition on heavy paper, cardboard cover, with index. These prices include the monthly supplements up to the time the next edition is issued and postage. All remittances should be forwarded direct to the Berne bureau by international postal money order.

CHANGE IN LAW GOVERNING ISSUANCE OF RADIO OPERATORS' LICENSES

The amendment quoted in the BULLETIN for last month was signed by the President on May 19, 1932, not April 19.

CHANGES IN CANADIAN STATIONS TRANSMITTING WEATHER REPORTS AND OTHER SERVICES

Effective at 0000, G. M. T., Canso and St. Paul Island coastal and direction-finding stations will maintain watch for commercial traffic on 500 kc/s. (600 m). Coast station rate, 6 cents per word. Bearings will be handled as hitherto on 375 kc/s. (800 m) after contact with the station has been made on 500 kc/s. (600 m).

Cape Race (VCE) will, at routine hours, transmit weather and other reports relative to navigation on 455 kc/s. (660 m) without making a preliminary call on 500 kc/s. (600 m).

Yarmouth (VAU) will, at routine hours, transmit weather and other reports relative to navigation on 417 kc/s. (720 m) without making a preliminary call on 500 kc/s. (600 m).

All the above-cited changes are effective August 1, 1932.

CHANGE IN BERMUDA, ST. GEORGE (VRT), STATION

Ship-shore traffic.—The station located in $64^{\circ} 40' 07''$ W., $32^{\circ} 22' 57''$ N., now handles such traffic on 143 kc/s (2,100 m), 133.3 kc/s (2,250 m), A1, and on 500 kc/s (600 m), 451 kc/s (665 m), A2, at 1030 to 0230 daily, 1330 to 0130 Sundays. Also available at any hour for use as a radiobeacon upon receipt of a previous request.

Direction finding.—Signals for determination of bearings must be transmitted on 375 kc/s (800 m); results will be transmitted on 500 kc/s or 451 kc/s. Error is normally within 2° . Also available for ships requiring bearings with their own direction finders. Charge, \$1.22 in each case.

Weather reports.—At 0100, 1300 on 451 kc/s and at 0130, 1330 on 133.3 kc/s. Observations made at Bermuda at 0000 and 1200, respectively.

FREQUENCY MEASUREMENTS OF BROADCASTING STATIONS DURING MAY

During the month of May the Radio Division of the Department of Commerce measured the frequency of 393 broadcasting stations of this country. Of those measured, 247, or 62.8 per cent, deviated less than 50 cycles; 58, or 14.7 per cent, deviated less than 100 cycles; 48 or 12.4 per cent, went over the 100-cycle mark but stayed under 200; and the remaining 40, or 10.1 per cent, deviated 200 cycles above or below their assigned frequencies.

This month is the banner month for the class under 50 cycles, as the percentage, 62.8, is the highest of any month so far. This represents an increase of 3.2 per cent over April, the next best month which showed an increase of 6.8 per cent over March. The combined increase for April and May of 10 per cent over March shows that the broadcasters are making progress in their endeavor to comply with General Order No. 116 effective the 22d of the current month.

The following table gives the figures for the months of December, 1930, to May, 1932, inclusive:

RADIO SERVICE BULLETIN

15

Month	Number stations measured	Less than 50 cycles	Less than 100 cycles	Less than 200 cycles	Over 200 cycles
December	339	35 (13.5%)	66 (16.5%)	238 (70%)	
January	363	54 (15%)	102 (27%)	207 (59%)

GRAPHICAL DETERMINATION OF POLAR PATTERNS OF DIRECTIONAL ANTENNA SYSTEMS

In a paper of the above title, by G. L. Davies and W. H. Orton, RP435, Bureau of Standards Journal of Research, May, 1932, graphical methods for the determination of polar patterns of directional antenna systems are described. These methods are less tedious and more generally applicable than computation from available mathematical equations. At any distant point the relative phases of the disturbances from the individual antennas of an array are dependent upon the difference in the paths from the antennas to the point and upon the relative phases of the antenna currents. The path differences may be readily constructed on a scale drawing of the array, and by means of a special protractor these path differences are converted to phase angles for the construction of a vector diagram representing the disturbances at the field point. The resultant of this vector diagram gives the field intensity at that point. Such diagrams for a number of points equidistant from the array give the relative field intensities in various directions and thus enable a polar pattern to be drawn. By a principle for the addition of the directive patterns of groups of antennas the work involved in determining patterns of arrays containing a large number of antennas may be greatly simplified. This method also permits ground effects to be readily included, the image current being calculated by means of equations given by Wilmette.

Reprint copies of this paper will be available within a few weeks and may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D. C. The price will be quoted by that office on application.

NOTE.—This edition is the last supplement to the annual list of Commercial and Government Radio Stations of the United States, edition June 30, 1931. The 1932 edition probably will be ready for distribution sometime during the coming fall. It is quite probable that the prices of both annual lists will be materially increased. The prices can not be determined at this time. When available, notice will be published in a future edition of this Bulletin.
