**Planned Implementation or Retirement Date:** June 30, 2016

**Description of Foreseeable Impact** These network changes will create the potential for spectral interference on the CO-based ADSL and/or a Digital Design Loop (DDL) loops that share the same binder groups as the RT ADSL within the copper distribution feeder cable past the Feeder Distribution Interface (FDI).

**Description of Change:** When FP is installing a Digital Line Subscriber Access Multiplexer (DSLAM) or Litespan to provide Digital Subscriber Line (DSL) service from a Remote Terminal (RT) that is less than 30,000 feet from the Central Office and only when copper feeder is present between the Central Office and RT.

**Attachment:** Certificate of Service
