LABOR, AND PENSIONS

AGING

JOINT COMMITTEE
ON TAXATION

The Honorable Ajit V. Pai
Chairman
Federal Communications Commission
445 12th Street, SW
Washington, DC 20554

Dear Chairman Pai,

It is my understanding that on February 29, 2016, the Federal Communications Commission, issued a public notice for comments on the 2013 Signal Boosters Report and Order (WT Docket 10-4). Although the notice and comment period has concluded, the Commission has yet to announce any new rulemaking regarding signal booster technology.

Specifically, I am inquiring about the status of the Commission's decision to revisit the "personal-use restriction" for consumer signal boosters, which prevents businesses, public institutions, and other enterprises from purchasing and using consumer signal boosters. I also understand that this proposal has nearly unanimous support among wireless carriers, telecommunications industry groups, business/enterprise interests, and the public safety community.

Wilson Electronics LLC—a constituent company headquartered in Salt Lake City—is a leading manufacturer of consumer signal boosters and operates a manufacturing facility in St. George, Utah. This company has also expressed its support for the elimination of the personal-use restriction for consumer signal boosters.

I respectfully ask for an update on the Commission's proposal to revisit the 2013 Signal Booster Order, specifically the proposal to eliminate the personal-use restriction. Thank you for your assistance with regard to my request. I look forward to your response.

Sincerely,

Orrin G. Hatch
US Senator
