

Communications Status Report for Areas Impacted by Hurricane Florence September 19, 2018

The following is a report on the status of communications services in geographic areas impacted by Hurricane Florence as of September 19, 2018 at 11:00 a.m. EDT. This report incorporates network outage data submitted by communications providers to the Federal Communications Commission's Disaster Information Reporting System (DIRS). DIRS currently covers areas of Georgia, North Carolina, South Carolina and Virginia. Note that the operational status of communications services during a disaster may evolve rapidly, and this report represents a snapshot in time. As of today, Hurricane Florence has had an impact on communications, primarily in North Carolina, and to some degree in South Carolina.

The following 99 counties are in the current geographic area that is part of DIRS (the "disaster area").

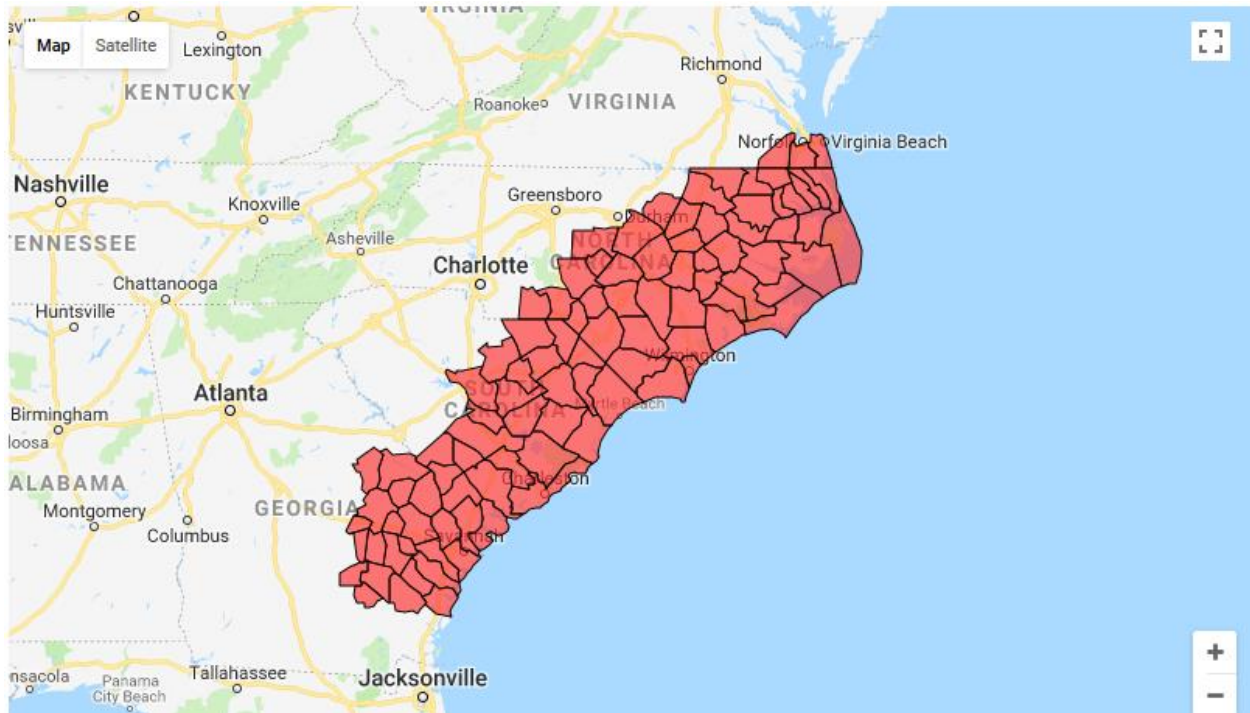

GEORGIA: Appling, Bacon, Bryan, Bulloch, Burke, Candler, Chatham, Effingham, Emanuel, Evans, Jeff Davis, Jefferson, Jenkins, Liberty, Long, McIntosh, Montgomery, Screven, Tattnall, Toombs, Treutlen, Wayne

NORTH CAROLINA: Anson, Beaufort, Bertie, Bladen, Brunswick, Camden, Carteret, Chatham, Chowan, Columbus, Craven, Cumberland, Currituck, Dare, Duplin, Edgecombe, Franklin, Gates, Greene, Halifax, Harnett, Hertford, Hoke, Hyde, Johnston, Jones, Lee, Lenoir, Martin, Moore, Nash, New Hanover, Northampton, Onslow, Pamlico, Pasquotank, Pender, Perquimans, Pitt, Richmond, Robeson, Sampson, Scotland, Tyrrell, Wake, Washington, Wayne, Wilson

SOUTH CAROLINA: Allendale, Bamberg, Barnwell, Beaufort, Berkeley, Calhoun, Charleston, Chesterfield, Clarendon, Colleton, Darlington, Dillon, Dorchester, Florence, Georgetown, Hampton, Horry, Jasper, Kershaw, Lee, Marion, Marlboro, Orangeburg, Richland, Sumter, Williamsburg

VIRGINIA: Chesapeake City, Suffolk City, Virginia Beach City

The following map shows the counties in the disaster area:

911 Services

The Public Safety and Homeland Security Bureau (PSHSB) learns the status of each Public Safety Answering Point (PSAP) through the filings of 911 Service Providers in the Disaster Information Reporting System (DIRS), through reporting done to the FCC's Public Safety Support Center (PSSC), coordination with state 911 Administrators and, if necessary, individual PSAPs.

Two PSAPs in North Carolina and one PSAP in South Carolina have their 911 calls rerouted to another PSAP:

- NC: Columbus County Central Communications has its 911 calls rerouted to another PSAP without location information. Also, Washington Police Communications, a secondary PSAP, has its 911 calls rerouted to another PSAP without location information.
- SC: Dillon County has its 911 calls rerouted to Florence County Dispatch with location information. Dillon County PSAP was flooded.

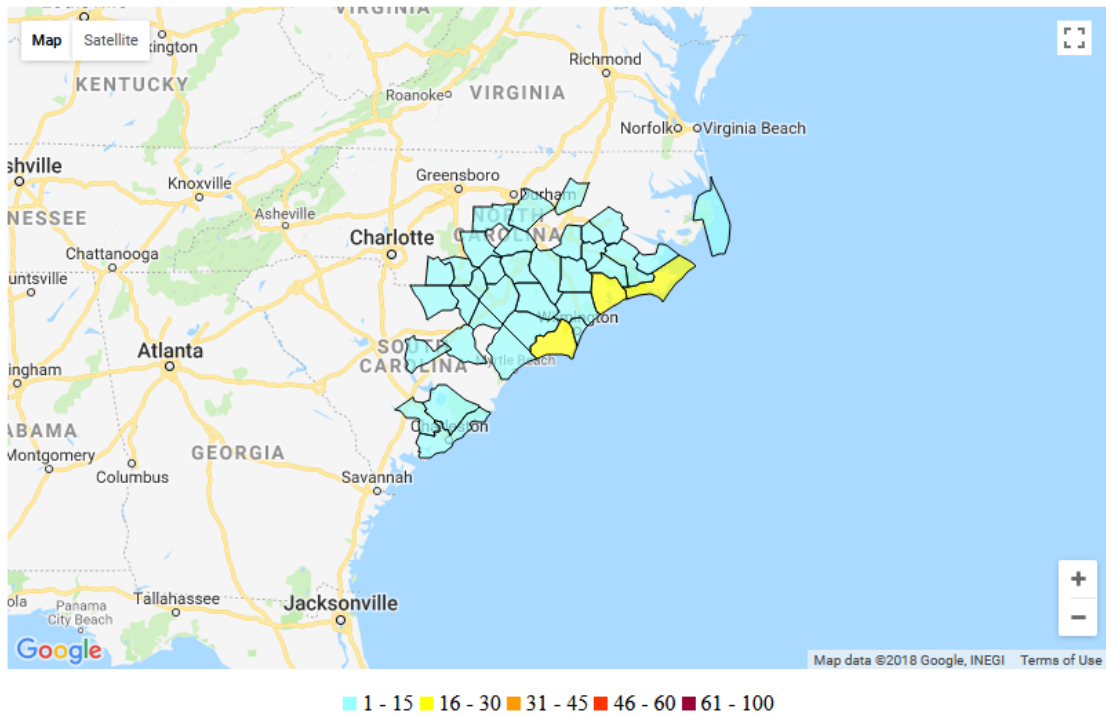

Wireless Services

The following section describes the status of wireless communications services and restoration in the disaster area, including the percentage of cell sites out of service for each county.

The following map of the disaster area illustrates which counties are most affected:

Percent Cell Sites Out-of-Service By County

9/19/2018 11:18:10 AM

The following table provides cell sites out of service by county. There are 2.2% of the cell sites out of service in the affected area, down from 4.1% yesterday. The information shown was provided by the signatories to the Wireless Network Resiliency Cooperative Agreement as well as two additional companies who agreed to allow us to include their data in the aggregated totals.

There are no cell sites affected in Virginia.

The number of cell site outages in a specific area does not necessarily correspond to the availability of wireless service to consumers in that area. See Improving the Resiliency of Mobile Wireless Communications Networks, Order, 31 FCC Rcd 13745, para. 10 (2016) (recognizing the difficulties in accurately depicting the ongoing status of a wireless provider’s service during emergencies). Wireless networks are often designed with numerous, overlapping cell sites that provide maximum capacity and continuity of service even when an individual site is inoperable. Moreover, wireless providers frequently use temporary facilities such as cells-on-wheels (COWs), increased power at operational sites, roaming agreements, or take other actions to maintain service to affected consumers during emergencies or other events that result in cell site outages.

Cable Systems and Wireline (Combined)

The cable system and wireline outage table reflects outages of communications service provided by cable and wireline companies, which may include the loss of telephone, television, and/or Internet services.
