Subject: Authorization Granted: 5850-5895 MHz Emergency STA Request - Surf Broadband Solutions, Inc.
Attachments: Surf Broadband Solutions U-NII-4.docx

Mr. Ritter,

The application for an emergency STA filed by Surf Broadband Solutions on April 10, 2020 is granted via this email. The applicant will be using the 5850-5895 MHz band to provide relief during the state-of-emergency caused by the spread of COVID-19 throughout the United States. Applicant is advised that it must ensure proper protection of incumbents in the 5850-5895 MHz band and otherwise comply with the conditions described below.

This grant is for a period of 60 days, provided the applicant files a complete FCC Form 601 application for an STA to continue its operations in the 5850-5895 MHz band within 10 days of today's date (April 14, 2020). If applicant fails to file a complete FCC Form 601 application by this date, its STA will terminate at midnight on that date. Applicant's use of the 5850-5895 MHz band is authorized on a non-interference basis and is limited by the conditions described below.

By utilizing the 5850-5895 MHz band pursuant to this STA, the applicant agrees to the following conditions:

- It understands that operations under this STA are subject to the general conditions of operation set forth in Section 15.5 of the Commission's rules (including that its access is non-exclusive and not subject to interference protection). STA recipients with overlapping grants must work together to resolve interference concerns.
- It is responsible for ensuring that it does not cause interference to existing licensees. It must review existing DSRC licenses in this band to determine any nationwide, statewide, or countywide licenses that cover or are adjacent to its service area, as well as any site licenses that are near that service area. It must then contact each of these affected licensees before beginning operation and provide its contact information so that the licensee can inform it of interference issues. It may then begin operation; it need not await a response or approval. If a complaint of interference cannot be timely resolved, operation under this STA must cease. It may not operate within 2 kilometers of any site license, regardless of notification or actual interference.
- It will operate consistent with the power levels in Section 15.407(a)(3) of the Commission's rules.
- It will attenuate emissions at 5895 MHz to a level of -27dBm or less.
- It understands that any emergency STA grant is conditioned on the applicant filing a formal STA application on FCC Form 601 (Radio Service Code QQ) within 10 days of emergency STA grant. As part of that filing, it must provide a phone number which connects directly to a person who is able to immediately resolve any interference concerns arising from its operations pursuant to this STA.
- Upon expiration of this STA, it will cease operating in the 5850-5895 MHz band and retune equipment to operate in compliance with the Commission's equipment certifications; it will confirm with the

Bureau within 14 days of expiration that it has successfully returned all of its devices to be compliant with Commission certifications.

- It understands that operations under this STA shall protect federal radiolocation services operating in the 5850-5895 MHz band and, to afford such protection, operations under this STA are prohibited within 75 kilometers of the locations listed in the table below and any additional sites specified by the Commission after initial grant.
- It understands that any structure utilized to operate pursuant to this STA must comply with the height limitations specified in Section 17.7 of the Commission’s rules or must be registered with the FAA.

The following are federal radiolocation services locations. Operations under this STA are not permitted within 75 kilometers of these locations:

Location	State	Latitude	Longitude
Ft. Rucker	AL	311947N	0854255W
Redstone Arsenal	AL	343630N	0863610W

**Surf Broadband Solutions
Request for Special Temporary Authority**

Pursuant to Section 1.931(a)(2)(iv) of the Federal Communications Commission’s (“FCC” or “Commission”) Rules, 47 CFR § 1.931(a)(2)(iv), Surf Broadband Solutions, Inc. (“Surf”) hereby requests Special Temporary Authority (“STA”) to deploy and provide point-to-multipoint service in the following counties in our coverage area.

Illinois:

Bureau	Ford	Kankakee	Livingston	Will
Cook	Grundy	Kendall	Marshall	
Dekalb	Henry	LaSalle	Ogle	
DuPage	Kane	Lee	Putnam	

Indiana:

Benton	Kosciusko	Lake	Porter	Warren
Elkhart	LaPorte	Marshall	St Joseph	
Jasper	Lagrange	Newton	Starke	

Michigan:

Allegan	Cass	Ionia	Livingston	St Joseph
Barry	Eaton	Jackson	Ottawa	
Berrien	Ingham	Kent	Shiawassee	

Surf seeks temporary access to the 5850-5895 MHz band for a period of 60 days. Grant of an STA would be consistent with the Commission’s grant of emergency STA to 33 fixed wireless broadband providers (“WISP STA”) on March 26, 2020 and will help Surf meet the surge in demand for fixed broadband services during the COVID-19 Pandemic and subsequent stay at home orders.

Surf is a fixed wireless internet service provider delivering telecommunications services to the residential, commercial, small business, education, healthcare, and public sector markets. For many of Surf’s customers there are no other alternatives to terrestrial broadband services and Surf relies heavily on unlicensed spectrum for the last mile connectivity to end users including the 5GHz U-NII bands.

As this virus has spread federal and local governments have increased measures to encourage “social distancing” and discouraging unnecessary travel outside of the home. These warnings and regulations have resulted in more and more Americans using their home connections for business and education, circumstances that are likely to continue for at least several weeks.

Over the month of March Surf has seen an increase in usage of over 30% as more and more schools and businesses close and consumers practice “Social Distancing.” During this time we are also expanding our services to ensure families in need are able to stay connected during the new shelter in place regulations which will further increase the usage we are experiencing.

Surf requires access to additional spectrum to meet this increased demand and ensure that students, consumers, farms, and businesses can stay connected with adequate broadband services during this time. Surf currently uses the U-NII bands to deliver fixed broadband services. The U-NII-4 band (5820-5925 MHz) is shared with Dedicated Short-Range Communications (“DSRC”) service (Radio Codes IQ and QQ) and certain federal users.

Pursuant to Section 1.931(a)(2)(iv) of the FCC’s Rules, the Commission may grant a request for STA upon finding that there are extraordinary circumstances requiring operation in the public interest and that delay in the institution of such service would seriously prejudice the public interest.

Surf respectfully submits that grant of this request meets the above standard and is in the public interest. Emergency use of the 45MHz in the 5850-5895 MHz band will be the best solution for helping to meet the increased demand for fixed broadband services in the areas listed above. As noted previously, many of Surf’s customers have no alternative to terrestrial broadband services. As COVID-19 has spread, federal and local governments in Surf’s coverage area have taken increasingly stricter steps to encourage social distancing and for residents to stay at home. These warnings and regulations have resulted in more and more people relying on their home connection for educational as well as business purposes resulting in a profound shift of broadband use to residences. Second, other unlicensed bands such as U-NII-1 and U-NII-3 are too congested to meet the existing and anticipated surge in bandwidth demand, including the needs of first responders. Third, Surf has access to FCC-certified 5GHz equipment that can be easily and quickly re-tuned via a software update to operate in the 5850-5895 MHz band. Fourth, Surf would be able to implement these changes remotely without needing to dispatch technicians to customer locations in order for the access to be enabled. Since this change can be implemented remotely, additional risks to staff and consumers is mitigated since no on-site or close contact visits would be required.

Surf respectfully submits that delay to the institution of the operations requested herein would seriously prejudice the public interest. To meet the increased demand and ensure that students, consumers, farmers and businesses can continue to stay online with adequate bandwidth during this crisis Surf requires temporary access to this additional spectrum so it can increase throughput to its customers. Surf’s proposed operations would not cause interference to other licensed operations.

Consistent with the WISP STA, Surf understands that the following conditions may apply to its STA:

- It understands that operations under this STA are subject to the general conditions of operation set forth in Section 15.5 of the Commission's rules.
- It is responsible for ensuring that it does not cause interference to existing licensees. It must review existing DSRC licenses in this band to determine any nationwide, statewide, or countywide licenses that cover or are adjacent to its service area, as well as any site licenses that are near that service area. It must then contact each of these affected licensees before beginning operation and provide its contact information so that the licensee can inform it of interference issues. It may then begin operation; it need not await a response or approval. If a complaint of interference cannot be timely resolved, operation under this STA must cease. It may not operate within 2 kilometers of any site license, regardless of notification or actual interference.
- It will operate consistent with the power levels in Section 15.407(a)(3) of the Commission's rules.
- It will attenuate emissions at 5895 MHz to a level of -27dBm or less.
- Upon expiration of this STA, it will cease operating in the 5.8 GHz band and retune equipment to operate in compliance with the Commission's equipment certifications; it will confirm with the Bureau within 14 days of expiration that it has successfully retuned all of its devices to be compliant with Commission certifications.
- It understands that operations under this STA shall protect federal radiolocation services operating in the 5.8 GHz band and, to afford such protection, operations under this STA are prohibited within 75 kilometers of designated federal locations and any additional sites specified by the Commission after initial grant.
- It understands that any structure utilized to operate pursuant to this STA must comply with the height limitations specified in Section 17.7 of the Commission's rules or must be registered with the FAA.

Should the commission have any questions or need additional information, please contact our NOC Manager on this matter:
