

## Communications Status Report for Areas Impacted by Tropical Storm Marco & Hurricane Laura August 26, 2020

The following is a report on the status of communications services in geographic areas impacted by Tropical Storm Marco and Hurricane Laura as of August 26, 2020 at 12:00 p.m. EDT. DIRS is currently activated for all the counties in Arkansas and Louisiana and a subset of counties in Mississippi and Texas. Note that the operational status of communications services during a disaster may evolve rapidly, and this report represents a snapshot in time.

### 911 Services

The Public Safety and Homeland Security Bureau (PSHSB) learns the status of each Public Safety Answering Point (PSAP) through the filings of 911 Service Providers in DIRS, reporting to the FCC’s Public Safety Support Center, coordination with state 911 Administrators and, if necessary, direct contact with individual PSAPs.

Cameron Parish Sheriff’s Office in Louisiana has its 911 calls rerouted to another PSAP.

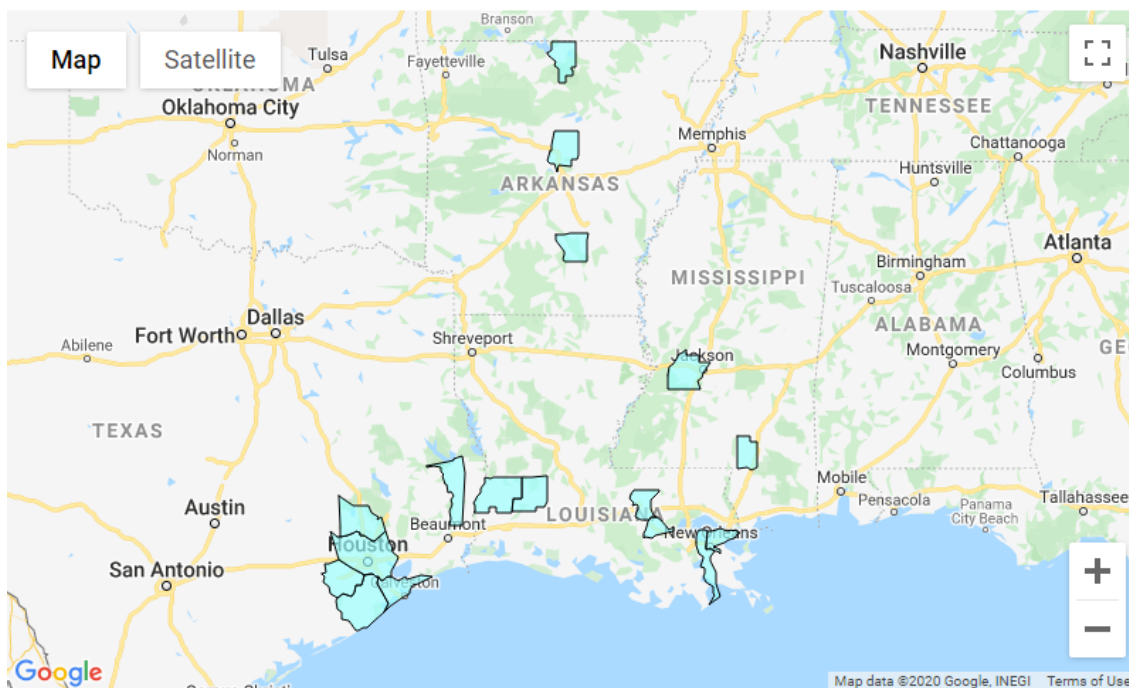

**Wireless Services**

The following section describes the status of wireless communications services and restoration in the disaster area, including the percentage of cell sites out of service for each county.

**Percent Cell Sites Out-of-Service By County**

■ 1 - 15 ■ 16 - 30 ■ 31 - 45 ■ 46 - 60 ■ 61 - 100

The following table provides cell sites out of service by county. There are 0.4% (no change from yesterday) of the cell sites out of service in the affected area. The information shown was provided by the signatories to the Wireless Network Resiliency Framework Cooperative Agreement.

**Arkansas**

| State | Affected Counties | Cell Sites Served | Cell Sites Out | Percent Out | Cell Sites Out Due to Damage | Cell Sites Out Due to Transport <sup>1</sup> | Cell Sites Out Due to Power |

The number of cell site outages in a specific area does not necessarily correspond to the availability of wireless service to consumers in that area. See Improving the Resiliency of Mobile Wireless Communications Networks, Order, 31 FCC Rcd 13745, para. 10 (2016) (recognizing the difficulties in accurately depicting the

ongoing status of a wireless provider's service during emergencies). Wireless networks are often designed with numerous, overlapping cell sites that provide maximum capacity and continuity of service even when an individual site is inoperable. In addition, wireless providers frequently use temporary facilities such as cells-on-wheels (also known as COWs), increased power at operational sites, roaming agreements, or take other actions to maintain service to affected consumers during emergencies or other events that result in cell site outages.
