Before the  
Federal Communications Commission  
Washington, D.C. 20554

In the Matter of )  
 )  
Use of the 5.850-5.925 GHz Band ) ET Docket No. 19-138

ERRATUM

Released: December 11, 2020

By the Acting Chief, Office of Engineering and Technology:

On November 20, 2020, the Commission released a *First Report and Order, Further Notice of Proposed Rulemaking, and Order of Proposed Modification*, FCC 20-164, in the above-captioned proceeding. This Erratum corrects footnote 146 to read as follows:

“<sup>146</sup> As per 47 U.S.C. § 316, we provide for a 30-day protest period before these modifications can become final. *See infra*. paragraph 204.”

This Erratum also amends the Final Rules in **APPENDIX A** of the document, as indicated below:

1. Paragraphs (a)(3)(ii) – (iv) of Section 15.407 are corrected to read as follows:

“(ii) For an indoor access point operating in the 5.850-5.895 GHz band, the maximum power spectral density must not exceed 20 dBm e.i.r.p. in any 1-megahertz band. In addition, the maximum e.i.r.p. over the frequency band of operation must not exceed 36 dBm. Indoor access points operating on a channel that spans the 5.725-5.850 GHz and 5.850-5.895 GHz bands must not exceed an e.i.r.p. of 36 dBm.

(iii) For client devices operating under the control of an indoor access point in the 5.850-5.895 GHz band, the maximum power spectral density must not exceed 14 dBm e.i.r.p. in any 1-megahertz band, and the maximum e.i.r.p. over the frequency band of operation must not exceed 30 dBm. Client devices operating on a channel that spans the 5.725-5.850 GHz and 5.850-5.895 GHz bands must not exceed an e.i.r.p. of 30 dBm.

(iv) For a subordinate device operating under the control of an indoor access point in the 5.850-5.895 GHz band, the maximum power spectral density must not exceed 20 dBm e.i.r.p. in any 1-megahertz band, and the maximum e.i.r.p. over the frequency band of operation must not exceed 36 dBm.”

2. Paragraphs (b)(5)(i) and (b)(5)(iii) of Section 15.407 are corrected to read as follows:

“(i) For an indoor access point or subordinate device, all emissions at or above 5.895 GHz shall not exceed an e.i.r.p. of 15 dBm/MHz and shall decrease linearly to an e.i.r.p. of -7 dBm/MHz at or above 5.925 GHz.”

“(iii) to read as follows: “For a client device or indoor access point or subordinate device, all emissions below 5.725 GHz shall not exceed an e.i.r.p. of -27 dBm/MHz at 5.65 GHz increasing linearly to 10 dBm/MHz at 5.7 GHz, and from 5.7 GHz increasing linearly to a level of 15.6

**Federal Communications Commission**

---

dBm/MHz at 5.72 GHz, and from 5.72 GHz increasing linearly to a level of 27 dBm/MHz at 5.725 GHz.”
