ERRATUM

Released: August 15, 2023

By the Chief, Media Bureau:

On August 1, 2023, the Commission released an Order and Notice of Proposed Rulemaking, FCC 23-61, in the above-captioned proceeding. This Erratum amends Appendix A of that release as indicated below.

- 1. Paragraph (e) of proposed rule (Appendix A) Section 73.404 on page 21, is corrected to read as follows:

(e) All FM stations transmitting hybrid IBOC signals may operate with total effective radiated power of up to -14 dBc. No station may operate its digital carriers with a total effective radiated power in excess of -10 dBc. A station using symmetric sidebands planning to operate with a total radiated power in excess of -14 dBc must confirm compliance with Table 1 below by calculating the signal strength of its analog signal at the first adjacent station’s 60 dBμ contour. All calculations must be made using the standard FCC contour prediction methodology.

**Table 1 to Paragraph (e) – Maximum Permissible FM Digital ERP for Symmetric Sideband Operation**

<b>Proponent Analog F(50,10) Field Strength at First Adjacent Station’s Analog 60 dBμ F(50,50) Contour (Symmetric Sideband Operation)</b>	<b>Maximum Permissible FM Digital ERP</b>
57.9 dBμ and above	-14 dBc
56.5 dBμ to 57.8 dBμ	-13 dBc
55.6 dBμ to 56.4 dBμ	-12 dBc
54.1 dBμ to 55.5 dBμ	-11 dBc
54.0 dBμ or less	-10 dBc
