

OFFICE OF CHAIRMAN BRENDAN CARR

Carr Applauds House Action on Broadband Permitting Reform

These House Bills Accelerate Broadband Infrastructure Builds, Drive Prices Down

WASHINGTON, November 18, 2025—Today, the House Energy and Commerce Committee’s Subcommittee on Communications and Technology passed a package of bills to streamline the broadband permitting process.

Chairman Carr issued the following statement:

““Thanks to President Trump and the strong leadership in Congress by Chairman Guthrie and Chairman Hudson, America’s broadband builders are moving forward again. This package of common sense permitting reforms will help unleash additional broadband infrastructure builds in communities all across the country. This will not only ensure that more families have access to high-speed connectivity, but it will drive down the prices for broadband services by cutting out excessive costs. Getting this done will be a great win for the country.

“At the FCC, we have been moving quickly to execute on the agency’s Build America Agenda which focuses on accelerating high-speed infrastructure builds and restoring wireless leadership. Today’s congressional action will help deliver on these priorities. I look forward to quick passage of these permitting reforms.”
