Arkansas Performance Metrics

All data included here is taken from the Arkansas Hit or Miss Report (HOMR). This table is provided as a reference tool for the convenience of the reader. No conclusions are to be drawn from the raw data contained in this table. Our analysis is based on the totality of the circumstances, such that we may use non-metric evidence, and may rely more heavily on some metrics than others, in making our determination. The inclusion of the particular metrics in this table does not necessarily mean that we relied on all of these metrics, nor that other metrics may not also be important in our analysis. Some metrics that we have relied on in the past and may rely on for a future application were not included here because there was no data provided for them (usually either because there was no activity, or because the metrics are still under development). Metrics with no retail analog provided are usually compared with a benchmark. Note that for some metrics during the period provided, there may be changes in the metric definition, or changes in the retail analog applied, making it difficult to compare the data over time.
