## I. INTRODUCTION

1. The Federal Communications Commission is charged with "encourag[ing] the deployment on a reasonable and timely basis of advanced telecommunications capability to all Americans," by removing barriers to infrastructure investment and by promoting competition in the telecommunications market. ${ }^{1}$ For the past two years, the Commission has taken up the mantle; it has made closing the digital divide between Americans with, and without, access to modern broadband networks its top priority. Modern society is an increasingly digital one, and accessing advanced services is essential to ensuring that all Americans can participate and thrive. We remain committed to ensuring that all Americans, including those in rural areas, Tribal lands, and disaster-affected areas, have the benefits of a high-speed broadband connection.
2. As a result of those efforts, the digital divide has narrowed substantially, and more Americans than ever before have access to high-speed broadband. In the time since the Commission's last Broadband Deployment Report, the number of Americans lacking a connection of at least $25 \mathrm{Mbps} / 3$ Mbps (the Commission's current benchmark) has dropped from 26.1 million Americans at the end of 2016 to 21.3 million Americans at the end of 2017, a decrease of more than $18 \%$. Moreover, the majority of those gaining access to such connections, approximately 4.3 million, are located in rural America. Higher-speed services are being deployed at a rapid rate as well. For example, the number of Americans with access to at least $250 \mathrm{Mbps} / 25 \mathrm{Mbps}$ broadband grew in 2017 by more than $36 \%$, to 191.5 million. And the number of rural Americans with access to such broadband increased by $85.1 \%$ in 2017.
3. Other data beyond the data underlying the Broadband Data Report illustrates industry's response to the Commission's actions promoting broadband deployment. During 2018, for example, broadband providers, both small and large, deployed fiber networks to 5.9 million new homes, the largest number ever recorded. ${ }^{2}$ Also, capital expenditures by broadband providers increased in 2017, reversing declines that occurred in both 2015 and 2016. ${ }^{3}$
4. With this compelling evidence before us, we find, for a second consecutive year, that advanced telecommunications capability is being deployed on a reasonable and timely basis. With this report, the Commission fulfills the Congressional directive to report each year on the progress made in deploying broadband to all Americans. ${ }^{4}$

## II. BACKGROUND

5. Section 706(b) of the Telecommunications Act of 1996 requires the Commission to annually "initiate a notice of inquiry concerning the availability of advanced telecommunications capability to all Americans (including, in particular, elementary and secondary schools and classrooms)." ${ }^{5}$ In conducting this inquiry, the Commission must "determine whether advanced telecommunications

[^0]capability is being deployed to all Americans in a reasonable and timely fashion." ${ }^{6}$ If that determination is negative, the Commission "shall take immediate action to accelerate deployment of such capability by removing barriers to infrastructure investment and by promoting competition in the telecommunications market." ${ }^{7}$
6. On February 2, 2018, the Commission released the 2018 Broadband Deployment Report (2018 Report) in which it found that advanced telecommunications capability was being deployed to all Americans in a reasonable and timely fashion. ${ }^{8}$ Consistent with the statute, the Commission focused its analysis in the 2018 Report on the progress made in the deployment of fixed and mobile services. ${ }^{9}$ Since the 2018 Report, the Commission has continued to aggressively facilitate broadband deployment by reducing regulatory barriers to the deployment of wireline and wireless infrastructure and by taking a number of other measures to improve the regulatory environment and promote broadband deployment. ${ }^{10}$
7. On August 8, 2018, the Commission released the Fourteenth Section 706 Report Notice of Inquiry (Notice), seeking comment on how a range of factors may affect the deployment and availability of advanced telecommunications capability, and on whether and how to incorporate those factors into our section 706(b) analysis for both fixed and mobile services. ${ }^{11}$

## III. EVALUATING DEPLOYMENT OF ADVANCED TELECOMMUNICATIONS CAPABILITY TO ALL AMERICANS IN A REASONABLE AND TIMELY FASHION

8. As proposed in the Notice, this Report will holistically evaluate the availability of fixed and mobile services over a 5 -year time period (2013-2017) using the same four methods for determining the proportion of Americans with access to broadband presented in the 2018 Report: (1) those with access to fixed services; (2) those with access to mobile LTE services; (3) those with access to both fixed and mobile LTE services; and (4) those with access to at least one of either fixed or mobile LTE services. ${ }^{12}$ The record provides substantial support for continuing our use of a progress-based approach to analyze deployment of both fixed and mobile broadband services-an approach commenters agree is most consistent with the language of section 706-and enables the Commission to determine whether

[^1]advanced telecommunications capability "is being deployed" in the manner that section 706 requires. ${ }^{13}$ As explained in the 2018 Report, Congress intended that the Commission evaluate the current state of deployment to all Americans; it did not ask us to determine whether each and every American is served at this moment. ${ }^{14}$
9. We agree with commenters that we must continue to take concrete steps toward closing the digital divide for all Americans. ${ }^{15}$ Section 706(a) mandates that we promote the deployment of advanced telecommunications capability in general, ${ }^{16}$ and we believe that continued forward progress toward universal deployment is imperative if all Americans are to enjoy the full promise of our economy. ${ }^{17}$ We agree with WISPA that "the Commission should continue to take affirmative steps toward . . . closing the 'digital divide' that separates rural and other typically unserved or underserved areas from areas with substantially greater connectivity service and service options." ${ }^{18}$ We also agree with CWA that "an accurate assessment of the deployment and adoption of advanced telecommunications capability is essential to craft policies to close the digital divide and promote digital equity for all Americans." ${ }^{19}$ To that end, we agree with the Free State Foundation that "it should be a Commission goal to proactively identify and remove . . . regulatory barriers to broadband infrastructure investment. ${ }^{י 20}$ We remain committed to ensuring that all Americans can share in the benefits of access to advanced telecommunications capability, and we will continue to monitor progress in the availability of such services.

## A. Defining Advanced Telecommunications Capability

10. This Report continues the Commission's practice of examining both fixed and mobile broadband deployment. ${ }^{21}$ Consistent with our conclusion in the 2018 Report, we consider both fixed and mobile services to be capable of meeting the definition of "advanced telecommunications capability" under section $706 .{ }^{22}$ This finding is consistent with the language of the statute, which defines advanced

[^2]${ }^{14} 2018$ Report, 33 FCC Rcd at 1663-64, paras. 10-13; see also Comcast Reply at 3-4 (explaining that the section 706 inquiry "is clearly a question of progress over time").

${ }^{18}$ WISPA Comments at 6 ; see also Verizon Comments at 2 (" $[t]$ he Commission should continue - as it is already doing in multiple proceedings - to advance policies that will drive deployment of broadband to areas that currently lack adequate broadband service through a framework that encourages maximum broadband investment").
${ }^{19}$ CWA Comments at 6.
${ }^{20}$ FSF Comments at 11 .
telecommunications capability "without regard to any transmission media or technology.," ${ }^{23}$
11. In the 2018 Report, the Commission concluded that mobile services are not "currently full substitutes for fixed service," while determining that both fixed and mobile service "clearly provide[] capabilities that satisfy the statutory definition of advanced telecommunications capability, and are important services that provide different functionalities, tailored to serve different consumer needs." ${ }^{24}$ While some commenters submit that consumer preferences and demands for mobile services have expanded since the 2018 Report, ${ }^{25}$ others contend that consumers are continuing to rely on access to both fixed and mobile networks, often using both in distinct ways, and as such, they urge the Commission to find that fixed and mobile services are not close substitutes for all uses and customer groups at this point in time. ${ }^{26}$ We recognize that Americans have never been more reliant on mobile broadband for accessing and sharing information, and in response to the growing demand for data, mobile wireless providers continue to expand and improve their networks. ${ }^{27}$ And we anticipate that, in the future, mobile services will continue to expand and become more versatile, with technological advances such as 5 G potentially allowing mobile services to provide performance characteristics such as speed and service quality that are similar to fixed services. ${ }^{28}$ However, we find it is not necessary in this Report to specify, among a wide range of use cases, the circumstances in which fixed and mobile services are or are not close substitutes. As with the 2018 Report, we conclude that both fixed and mobile services provide capabilities that satisfy the statutory definition of advanced telecommunications capability and, as before, that despite the increasing ubiquity and capabilities of mobile services, there is insufficient evidence in the record to conclude that mobile and fixed broadband services are full substitutes in all cases. ${ }^{29}$ Thus, for the purposes of this Report, we will continue to examine the deployment of fixed and mobile services, both individually and in conjunction with one another.
12. Performance Benchmarks for Fixed Service. We conclude that the current speed benchmark of $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ remains an appropriate measure by which to assess whether a fixed service is providing advanced telecommunications capability. This finding follows the proposal in the

Dortch, Secretary, FCC, GN Docket No. 18-238, at 3-4 (filed Nov. 15, 2018) (CC, PK \& NHMC Nov. 15, 2018 Ex Parte Letter); see also, e.g., Teresa Hamm Reply at 1 ("Significant limitations of mobile service, including prohibitive cost, unreliable service, data caps and limited accessibility, should disqualify mobile service as a substitute for fixed home broadband."); Mayor W. Jeff Williams Reply at 1 (same); OTI Reply at 3 ("Data caps, limited bandwidth capacity, the inconsistency of signal strength, and complex pricing models limit mobile [broadband] from being a substitute for fixed [broadband]."); Leadership Conference Feb. 4, 2019 Ex Parte Letter at 3 ("[D]espite advances in mobile technology, mobile LTE service remains below broadband speed, . . . and wireless broadband is more expensive with more restrictions than wireline broadband. These serious drawbacks, along with consumer usage patterns, reaffirm the conclusion that mobile and fixed broadband services are complimentary [sic] rather than substitutions for each other.").

Notice, and there is significant support in the record for maintaining the current fixed $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ speed benchmark. ${ }^{30}$ In maintaining the benchmark of $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$, we emphasize the benefit in maintaining a consistent approach to the section 706 inquiry from report to report. Given that the record lacks a compelling justification for raising the benchmark, we are especially cognizant of the value presented by a consistent benchmark, which better enables the Commission and the public to track deployment progress over time.
13. While some commenters argue for increasing the fixed speed benchmark above 25 $\mathrm{Mbps} / 3 \mathrm{Mbps},{ }^{31}$ we conclude that fixed services with speeds of $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ continue to meet the statutory definition of advanced telecommunications capability; that is, such services "enable[] users to originate and receive high-quality voice, data, graphics, and video telecommunications." ${ }^{32}$ Record evidence indicates that our $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ benchmark reflects current consumer demand for high-speed broadband services. ${ }^{33}$ ADTRAN, for example, submits that the Commission's benchmark is "on the upper end of reasonableness, given the statute's definition of 'advanced telecommunications capabilities,' the Commission's interpretation of that term, consumer adoption rates for high speed services, and consumer demand for services such as 4 K TV. ${ }^{\prime 34}$ Moreover, we agree with WISPA that because a significant number of "current fixed broadband users are subscribing to service at speeds below the 25 $\mathrm{Mbps} / 3 \mathrm{Mbps}$ benchmark, the adoption rate for service at higher speeds does not yet support an increase in the threshold. ${ }^{י 35}$ Indeed, the most recent Internet Access Service Report finds that $33 \%$ of residential fixed connections are below that speed. ${ }^{36}$ As ITTA explains, in the future, "more audacious benchmarks, such as 100 Mbps downstream" may someday reflect consumer demand, but "the current market is not there yet. ${ }^{37}$
14. Although we agree with INCOMPAS and NCTA that our fixed speed benchmark must continue to keep pace with consumer usage, demand, and technology, ${ }^{38}$ the definition of advanced telecommunications capability in section 706 nowhere suggests that "advanced" necessarily means the

[^3]highest quality service possible. ${ }^{39}$ Relatedly, while some commenters suggest that our fixed broadband benchmark should include gigabit speeds, we decline to set an advanced telecommunications capability benchmark that exceeds investment and deployment capabilities and far exceeds consumer demand. ${ }^{40}$ The Commission's Form 477 data shows that in the areas where gigabit service is available, only $3.6 \%$ of Americans living in those areas are in fact subscribing to it. ${ }^{41}$ Notably, while $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ remains our fixed speed benchmark for purposes of conducting our inquiry under section 706 , we continue and expand upon our practice of showing progress of fixed services at multiple speed thresholds, including three speeds above the benchmark ( $50 \mathrm{Mbps} / 5 \mathrm{Mbps}, 100 \mathrm{Mbps} / 10 \mathrm{Mbps}$, and $250 \mathrm{Mbps} / 25 \mathrm{Mbps}$ ), to enable the Commission and the public to monitor consumer usage trends and marketplace developments.
15. We agree with R Street that we should look at multiple speed tiers, ${ }^{42}$ but we continue to find, consistent with the 2018 Report and longstanding Commission precedent, that a "single fixed speed benchmark provides a useful and administrable way of conducting our inquiry." ${ }^{43}$ Indeed, use of a benchmark actually makes it easier to track progress over time. While we use a single benchmark for the purposes of defining advanced telecommunications capability under section 706 , we also evaluate progress using a broad scope of speed tier data and different speed tiers across technologies. ${ }^{44}$
16. Performance Benchmarks for Mobile Service. We also maintain our approach from the 2018 Report for evaluating advanced telecommunications capability deployment for mobile services. The inherent variability of mobile services, as well as certain data limitations, continue to make the use of a single benchmark unworkable. ${ }^{45}$ Consequently, as was the case with the 2018 Report, we find that use of various data points is still the best method to assess the extent to which American consumers have access to mobile advanced telecommunications capability. ${ }^{46}$ In addition, this approach allows us to better make comparisons over time in a consistent manner. We use 4G LTE as our starting point and present 4G LTE coverage data based on the Form 477 minimum advertised speeds of $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$. Consistent with the findings of the previous report, we again find 4 G LTE to be the best proxy for what is "advanced" in

${ }^{39} 47$ U.S.C. § 1302(d)(1); see also ADTRAN Reply at 4-5 ("ADTRAN's products support the much higher speeds-$100 \mathrm{Mbps}, 1 \mathrm{Gbps}$ and even 10 Gbps -- that are now being deployed due to competition. But ADTRAN still believes that $25 / 3 \mathrm{Mbps}$ is currently an appropriate benchmark consistent with the Congressional directives in Section 706.").
${ }^{40}$ AT\&T Comments at 7; CTIA Comments at 9; INCOMPAS Comments at 3-4; NCTA Comments at 4. But see Free State Foundation Comments at 1 (stating that " $[\mathrm{t}]$ he Commission should not change benchmarks based on aspirations that do not reflect widespread consumer demand and that are not grounded in the text of Section 706"); ACA Reply at 4-5 (" $[\mathrm{R}]$ aising the benchmark is unwarranted.").
${ }^{41}$ See FCC, Fixed Broadband Deployment Data from FCC Form 477, Data as of December 31, 2017.
${ }^{42}$ R Street Comments at 2.
${ }^{43}$ See 2018 Report, 33 FCC Rcd at 1669, para. 25; see also 2016 Report, 31 FCC Rcd at 707, para. 19; Inquiry Concerning the Deployment of Advanced Telecommunications Capability to All Americans in a Reasonable and Timely Fashion, and Possible Steps to Accelerate Such Deployment Pursuant to Section 706 of the
today's market consistent with the requirements of 47 U.S.C. § 1302 in the mobile context. ${ }^{47}$ But like any mobile technology, its performance can be highly variable, including the manner in which the mobile network in an area is configured, such as the type of backhaul connected to the cell or available spectrum in an area. ${ }^{48}$ We therefore assess only the 4G LTE coverage in Form 477 where the mobile service provider claims that the 4 G LTE service is capable of a minimum of $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$. ${ }^{49} \mathrm{We}$ are not asserting, however, that $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$ is a mobile advanced telecommunications capability benchmark, and we supplement these results with Ookla's actual speed test data at a median speed of $10 \mathrm{Mbps} / 3$ Mbps or higher. ${ }^{50}$ This approach accounts for certain limitations of the current Form 477 mobile data, while helping us better understand the extent to which American consumers today are receiving speeds higher than $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$. Overall, retaining this methodology allows consistent metrics by which we can evaluate whether mobile advanced telecommunications capability is improving for American consumers. ${ }^{51}$
17. The record supports retaining the current approach. ${ }^{52}$ CTIA expressed concern, however, that the $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$ and $10 \mathrm{Mbps} / 3 \mathrm{Mbps}$ speed assessments may be unnecessarily rigid and suggested the Commission focus on "available data that demonstrates increasing consumer demand and use of mobile wireless services. ${ }^{י 53}$ While we agree with CTIA that evaluating mobile advanced telecommunications capability poses additional challenges, as shown from this and the last Report, we note that the use of these two speed criteria is sufficiently administratively workable and provides an advantage for determining whether the LTE available in an area is adequate to be considered advanced telecommunications capability for mobile services. ${ }^{54}$ The current criteria allow us to eliminate those areas where LTE may be less resilient, while providing a way of measuring improvement in those areas over time. We see no reason to deviate from our current methodology at this point in time. No other commenters argued that the method we use to analyze mobile advanced telecommunications capability, specifically, raises a concern.

${ }^{46} \mathrm{Id}$. at 1673-74, para. 34.
${ }^{47}$ Id. at 1670-73, paras. 27-32.
${ }^{48}$ Id. at 1672, n. 91.
${ }^{49} \mathrm{Id}$. at 1670, 1672-73, paras. 31-32 (assessing LTE at $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$ as a starting point for the analysis after analyzing the record and finding that LTE enables use consistent with the requirements of 47 U.S.C. § 1302, and speeds of $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$ or higher "are accepted by industry as consistent with an LTE network").
${ }^{50} \mathrm{Id}$. at 1670 , para. 27. Many commenters argued that 10 Mbps was an appropriate download speed for mobile consistent with the requirements of the statute. See id. at 1671, n. 82 .
${ }^{51}$ See infra Section IV.B.2; see also 2018 Report, 33 FCC Rcd at 1673-74, para. 34 ("By using the Form 477 data, and supplementing with Ookla data, however, we can show that, in those geographical areas (counties) where most consumers live, speeds appear to be well above $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$, with a median of $10 \mathrm{Mbps} / 3 \mathrm{Mbps}$ or higher."); 2018 Report, 33 FCC Rcd at 1674, n. 97 ("We believe that by reporting these two metrics, we are able to evaluate the extent to which, in the context of the mobile environment, mobile services are providing consumers with 'high-
(continued....)
18. Updating benchmarks. The Notice sought comment on methodology the Commission could use to update the benchmarks, noting that " $[\mathrm{t}]$ he Commission has in the past sought public input on finding 'a consistent, objective framework using predictable, reliable, and regularly-released public data' to establish an objective benchmark. ${ }^{י}{ }^{55}$ In most cases, however, commenters advocating for an alternative approach fail to provide a methodology or reliable data sources to implement their general ideas. ${ }^{56}$ As was the case with the 2018 Report, the only data-based approach in the record would use Form 477 subscription data to determine the fixed speed benchmark. ${ }^{57}$ We continue to believe this framework could have merit in the future, but it is still unclear how it would be applied to mobile services given that our Form 477 mobile subscription data collection currently is not sufficiently granular to make a meaningful evaluation of mobile service subscribership. ${ }^{58}$ To the extent that we adopt a methodology for updating our benchmarks, we believe it should be applicable to all services evaluated in this Report.
19. Other benchmarks. We decline the requests of some commenters to adopt additional benchmarks. Several commenters suggest adoption of a latency benchmark. ${ }^{59}$ We continue to lack a reliable and sufficiently comprehensive data source for such analysis, ${ }^{60}$ and commenters advocating a latency benchmark did not offer any workable options. In addition, as the Commission found in the 2018 Report, "[a]pplying a latency benchmark for all broadband services, whether fixed terrestrial, satellite, or mobile broadband, that would exclude from our section 706 analysis any consideration of broadband services that, on their face, would appear to provide consumers with the relevant capabilities articulated in section $706(\mathrm{~d})(1)$, would prevent a reliable or complete assessment of the deployment of advanced telecommunications capability." ${ }^{\text {" }}$ We also disagree with NTCA's assertion that "a measure of the true performance of certain broadband technologies [should include] the latency, data usage limits, and other technical capabilities of various offerings." ${ }^{\prime} 62$ We believe that such metrics fall outside of the scope of our section 706 inquiry. ${ }^{63}$ As the Commission found in the 2018 Report, "[w]hile factors such as data allowances or pricing may affect consumers' use of advanced telecommunications capabilities or influence decisions concerning the purchase of these services in the first instance, such considerations do

${ }^{55}$ Notice, 33 FCC Rcd at 8390, para. 10.
${ }^{56}$ See ADTRAN Comments at 6 (suggesting that the Commission conduct detailed reassessments of benchmarks every three years and "look at both the services/applications that customers are accessing"); Fiber Broadband Comments at 2 (submitting that the Commission should examine progress on both a national and more granular basis and include all-fiber networks); CTIA Comments at 18 (suggesting "rigid benchmarks are not well-suited" for mobile deployment and the Commission should focus on data reflecting consumer demand and use of mobile services); OTI Comments at 30-32 (recommending an increase of the $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ benchmark to reflect consumer needs and growing markets); NTCA Comments at 6-7 (suggesting a measure of latency, data usage limits and other technical capabilities); R Street Comments at 2-4 (suggesting that the "Commission should gather deployment data at [various] benchmarks, analyze the data holistically[,] keep those benchmarks consistent" and report on "latency, price and usage restrictions"); Speedchecker Comments at 1 (suggesting a benchmark that includes speed and a "Quality of Service requirement"); PK \& CC Comments at 3, 4-5 (explaining that maintaining the current benchmark without considering future benchmarks "runs contrary to the Commission's congressional mandate"); Leadership Conference Feb. 4, 2019 Ex Parte Letter at 3 ("The Commission should take a forwardlooking approach and raise the benchmark speed to recognize demand for gigabit networks capable of delivering more data and video-intensive services and applications over the Internet.").
${ }^{57}$ FSF Comments at 6, 7-8 (suggesting that "adoption of broadband speed benchmarks should be based on capabilities needed to support online services and applications that enjoy relatively wide everyday use by consumers"); see also 2018 Report, 33 FCC Rcd at 1669-70, para. 26.
not affect the underlying determination of whether advanced telecommunications capability has been deployed and made available to customers in a given area." ${ }^{64}$ Furthermore, commenters in support of including non-performance metrics fail to cite reliable, comprehensive data sources that we could use, or sound methodologies for incorporating these metrics into the section 706 inquiry. ${ }^{65}$

## B. Demographic Information

20. Section 706(c) directs the Commission to compile a list of geographical areas that are not served by any provider of advanced telecommunications capability and, to the extent that data from the Census Bureau are available, to determine, for each unserved area, the population, the population density, and the average per capita income. ${ }^{66} \mathrm{We}$ include a demographic data analysis below in Section IV.C. ${ }^{67}$ and show the availability of advanced telecommunications capability on a county-by county basis with demographic information in Appendix 5. ${ }^{68}$

## C. Schools and Classrooms

21. Section 706(b) also specifies that our annual inquiry concerning the availability of advanced telecommunications capability to all Americans must include "elementary and secondary schools and classrooms. ${ }^{.69}$ As in the 2018 Report, we continue to assess the current state of deployment in elementary and secondary schools in Section IV.F. below, using a short-term and long-term goal for broadband connectivity to schools of 100 Mbps per 1,000 students and staff, and 1 Gbps per 1,000 students and staff, respectively. ${ }^{70}$

## D. Tribal Lands

22. We continue to recognize the need to promote and encourage access to broadband on Tribal lands that do not have sufficient access today. ${ }^{71}$ Because the 2018 Report showed deployment of advanced telecommunications capability on certain Tribal lands lags deployment in other geographic

${ }^{69} 47$ U.S.C. § 1302(b).
areas, the Notice sought comment on additional measures to track deployment on Tribal lands. ${ }^{72}$ Recognizing that Tribal lands are often rural, high-cost areas, presenting significant obstacles to broadband deployment, the Notice also sought comment on additional considerations, such as rights-ofway or interconnection, preventing deployment that would otherwise occur. ${ }^{73}$ The record here provides limited information on additional ways we should track the progress of broadband deployment on Tribal lands. ${ }^{74}$ NDIA suggests we provide greater detail regarding broadband deployment in rural, city, suburban, and Tribal localities while NRECA cautions that our Form 477 data overstate broadband deployment on Tribal Lands. ${ }^{75}$ We recognize that broadband deployment on Tribal lands continues to lag behind and is less robust than in urban, and rural, areas. Because of the limited record, we find it even more critical for us to continue to monitor and analyze any relevant data to the extent they become available. Below, in Section IV.D., we present our measurement of deployment data on Tribal lands, acknowledging the challenges to increasing broadband services on Tribal lands.

## E. Disaster-Affected Areas

23. We find that reporting separately on the progress of disaster-affected areas is the most viable approach to assess our efforts and those of service providers to improve and restore broadband networks in such areas. The Notice sought comment on how to address natural disasters in reporting on the progress of deploying broadband. ${ }^{76}$ In the wake of a natural disaster, various commenters contend that our section 706 report should include deployment data that address disaster-affected areas. ${ }^{77}$ ADTRAN contends that in response to natural disasters, broadband providers' critical goals include "service reliability and service restoration," and because networks are more resilient today, reporting on these areas would not negatively impact the Commission's assessment of whether deployment is "reasonable and timely." ${ }^{78}$ Public Knowledge and Common Cause and Free Press argue that including broadband deployment measurements for Puerto Rico and other U.S. territories "ensure[s] the disaster stricken areas are not left behind." ${ }^{79}$ While ACA recommends that we "exclude storm-damaged regions from [our] overall deployment findings" and "report[] separately on progress to restore broadband availability in such regions, ${ }^{\prime 80}$ other commenters suggest we collect more comprehensive data on these areas and study the impacts of natural disasters. ${ }^{81}$ We agree that when conducting our inquiry, we should continue

reporting the available data from disaster-affected areas but, in doing so, we will report the data separately so that such damage does not artificially deflate progress in deployment and that we can continue to track progress in rehabilitating such networks. We take this approach in reporting data from the U.S. Territories where infrastructure damage occurred in Puerto Rico and the U.S. Virgin Islands from the 2017 hurricanes. Although the current record in this proceeding is limited, we believe our data collection and analysis remain vital to help fund and restore wireless and wireline infrastructure networks in the face of natural disasters. ${ }^{82}$

## IV. BROADBAND DEPLOYMENT AND AVAILABILITY

## A. Data Sources and Methodologies

24. We rely primarily upon the Commission's Form 477 deployment data to evaluate consumers' broadband options for fixed services. ${ }^{83}$ We agree with ACA that the Form 477 data "provides a sound basis for the Commission's analyses and findings under Section 706 regarding the progress of fixed broadband deployment to all Americans." ${ }^{84}$ We recognize that the Form 477 data collection is not perfect, and the Commission has an open proceeding considering ways to improve the accuracy and granularity of that data collection. ${ }^{85}$ While many commenters offer criticism of the Form 477 data, ${ }^{86}$ as well as recommendations for how to improve the Commission's data, ${ }^{87}$ this Report is not an appropriate vehicle for the Commission to make such changes to the data collection.
25. Consistent with previous findings by the Commission, ${ }^{88}$ the Form 477 data remain the most thorough and accurate data available to the Commission for this analysis. For deployment data prior to 2014, we rely on data from the State Broadband Initiative (SBI), which prior to the Commission's revision of the Form 477 data collection, were the most comprehensive and geographically granular deployment data publicly available. ${ }^{89}$ We note that the Form 477 deployment data and the SBI data report service at the census block level. ${ }^{90}$ For purposes of this report, a whole census block is classified as served if the Form 477 or the SBI data indicate that service can be provided anywhere in the census block.
${ }^{82}$ PK \& CC Comments at 19; OTI Comments at 34.
${ }^{83}$ Certain data for past years has been revised since the 2018 Report in light of revised Form 477 data submitted by broadband providers.
${ }^{84}$ ACA Comments at 8 ; see also AT\&T Comments at 5 ("AT\&T agrees with the Commission's proposal to use the same methodologies used in the 2018 Report to assess mobile broadband deployment for the next Broadband Deployment Report."); ITTA Comments at 12 ("[C]ontinuing to utilize Form 477 data presents the analytical advantage of enabling longitudinal comparisons.").
${ }^{85}$ The Commission continues to analyze whether, and how, the Form 477 data collection might be revised to address concerns about accuracy. See Modernizing the FCC Form 477 Data Program, Further Notice of Proposed Rulemaking, 32 FCC Rcd 6329, 6337, paras. 26-27 (2017) (Modernizing the FCC Form 477 Data Program). In this report, we use the best data available while recognizing improvements to the data may be needed. We note that our analysis may understate or overstate consumers' options for services to the extent that broadband providers fail to report data or misreport data. See FCC, Explanation of Broadband Deployment Data (Nov. 20, 2017), https://www.fcc.gov/general/explanation-broadband-deployment-data (describing quality and consistency checks performed on providers' submitted data and explaining any adjustments made to the Form 477 data as filed).
${ }^{86}$ See, e.g., Microsoft Comments at ii; NRECA Comments at 7-8; OTI Comments at 6-7; PCCA Comments at 2; PK \& CC Comments at 8; National Associations Reply at 2; CC, PK \& NHMC Nov. 15, 2018 Ex Parte Letter at 2-3.
${ }^{87}$ See, e.g., CWA Comments at 5-6; CTIA Comments at 3; MDTC Comments at Attach. at 5; Free Press Comments at 4-5; Speedchecker Comments at 4.
${ }^{88} 2018$ Report, 31 FCC Rcd at 1677, para. 43.
${ }^{89}$ See Inquiry Concerning the Deployment of Advanced Telecommunications Capability to All Americans in a Reasonable and Timely Fashion, and Possible Steps to Accelerate Such Deployment Pursuant to Section 706 of the Telecommunications Act of 1996, as Amended by the Broadband Data Improvement Act, GN Docket No. 11-121,

Therefore, it is not necessarily the case that every household, ${ }^{91}$ housing unit, or person will have coverage of a given service in a census block that this Report indicates is served. ${ }^{92}$ Nonetheless, we find that using a consistent unit of measurement (the census block) is an effective tool in measuring progress over time.
26. Furthermore, although staff examine FCC Form 477 data for quality and consistency, the data may understate or overstate deployment of services to the extent that broadband providers misreport or fail to report data. ${ }^{93}$ Staff evaluate deployment data for fixed terrestrial services using 2010 census block population data that the Commission staff has updated to account for population growth and economic development. ${ }^{94}$ We present an analysis of deployment data for fixed terrestrial services and for mobile LTE. In general, we report data separately on the U.S. Territories because the data for 2017 may significantly overstate current deployment in Puerto Rico and the U.S. Virgin Islands, which account for over $92 \%$ of the total combined population of the U.S. Territories. We remain uncertain as to the current deployment of broadband services in these areas given the damage to infrastructure in Puerto Rico and the U.S. Virgin Islands from Hurricanes Maria and Irma in 2017.
27. Fixed Terrestrial Services. We find that our Form 477 deployment data for fixed terrestrial services remain the most reliable and comprehensive data to assess the availability of fixed terrestrial services to American consumers. Using the Form 477 data since 2014, we evaluate the deployment of fixed terrestrial services with a minimum advertised speed of $10 \mathrm{Mbps} / 1 \mathrm{Mbps}, 25 \mathrm{Mbps} / 3$ Mbps, $50 \mathrm{Mbps} / 5 \mathrm{Mbps}, 100 \mathrm{Mbps} / 10 \mathrm{Mbps}$, and $250 \mathrm{Mbps} / 25 \mathrm{Mbps}$. For 2013 , which pre-dates the current version of the Form 477 data collection, we evaluate the availability of fixed terrestrial services using SBI data. The SBI data collection compiled data on $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ and $100 \mathrm{Mbps} / 10 \mathrm{Mbps}$, but not the other download and upload speed combinations presented in this report. ${ }^{95}$ Therefore, where applicable, we use the most comparable speed combinations collected in the 2013 SBI data as reasonable proxies. For $10 \mathrm{Mbps} / 1 \mathrm{Mbps}$, we use SBI reported speed of $10 \mathrm{Mbps} / 768 \mathrm{kbps}$, and for $50 \mathrm{Mbps} / 5$ Mbps , we use the SBI reported speed of $50 \mathrm{Mbps} / 6 \mathrm{Mbps}$. The SBI data does not include a reasonable proxy for $250 \mathrm{Mbps} / 25 \mathrm{Mbps}$, so we do not report estimates for that speed for 2013 . We provide separate
(Continued from previous page)
Eighth Broadband Progress Report, 27 FCC Rcd 10342, 10364-65, para. 28 (2012) (2012 Broadband Progress Report). The SBI data were collected semi-annually through state-led efforts and maintained by the National Telecommunications and Information Administration for the National Broadband Map, in collaboration with the Commission. Id. at 10365, para. 28.
${ }^{90}$ For purposes of this form, fixed broadband connections are available in a census block if the provider does, or could, within a service interval that is typical for that type of connection - that is, without an extraordinary commitment of resources-provision two-way data transmission to and from the Internet with advertised speeds exceeding 200 kbps in at least one direction to end-user premises in the census block. FCC, FCC Form 477 Local Telephone Competition and Broadband Report Instructions at 17 (2016), https://transition.fcc.gov/form477/477inst.pdf.
${ }^{91}$ A household consists of all the people who occupy a housing unit. A house, an apartment or other group of rooms, or a single room, is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live with any other persons in the structure and there is direct access from the outside or through a common hall. U.S. Census, Current Population Survey Subject Definitions (Aug. 25, 2015), https://www.census.gov/programs-surveys/cps/technical-documentation/subjectdefinitions.html\#household.

92 We note that these coverage estimates represent deployment of networks to consumers and do not indicate the extent to which service providers affirmatively offer service to residents in the covered areas. Further, this analysis likely overstates the coverage experienced by some consumers, especially in large or irregularly shaped census blocks. We therefore acknowledge that this analysis may overstate or understate the deployment of fixed and mobile services. See 2018 Report, 33 FCC Rcd at 1677, para. 43.
${ }^{93}$ See Federal Communications Commission, Explanation of Broadband Deployment Data (Dec. 12, 2018), https://www.fcc.gov/general/explanation-broadband-deployment-data (describing quality and consistency checks performed on providers' submitted data and explaining any adjustments made to the Form 477 data as filed).
deployment estimates for fixed services that include satellite services from 2014 to $2017 .{ }^{96}$ Finally, we use Form 477 subscribership data to calculate adoption rates for fixed terrestrial services.
28. Satellite Services. The Form 477 deployment data for satellite broadband indicate that satellite service offering $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ speeds is available to nearly all of the population. ${ }^{97}$ These data could overstate the deployment of these services. ${ }^{98}$ In Appendix 9, we provide deployment estimates for all fixed services, including satellite, from 2014 to 2017. ${ }^{99}$ Unless stated otherwise, we base the data presented on fixed terrestrial services, which do not include satellite.
29. Mobile Services. While recognizing certain limitations of the Form 477 data, we nonetheless elect to employ the Form 477 LTE technology coverage data in this Report, because they are the most reliable and comprehensive data that we have to assess the availability of mobile LTE to American consumers at a minimum advertised speed of $5 \mathrm{Mbps} / 1 \mathrm{Mbps} .{ }^{100}$ For 2013, we use SBI data, which only include a speed component for mobile services, ${ }^{101}$ while for 2014 through 2017, we use the Form 477 LTE deployment shapefiles with a minimum advertised speed of $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$. SBI data are not available for $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$, so our analysis of the 2013 data uses maximum advertised speeds of 6 $\mathrm{Mbps} / 768 \mathrm{kbps}$, which are the most comparable speeds collected in the SBI data in this time period. As the Commission has done in previous reports, we employ the centroid methodology in evaluating the Form 477 deployment data for LTE. ${ }^{102}$ We apply the same methodology as we use for fixed services and consider a census block to be covered by LTE services if there is at least one service provider serving that census block that reports $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$ as the minimum advertised speed, based on their Form 477 submission. ${ }^{103}$
30. We recognize, however, that actual speeds tend to be much faster than the minimum advertised speed. Therefore, we also present estimates based on Ookla speed test data to evaluate the availability of LTE with a median actual speed of $10 \mathrm{Mbps} / 3 \mathrm{Mbps}$ or higher. We rely on the Ookla data ${ }^{104}$ to supplement our Form 477 analysis, primarily because it allows us to better evaluate the extent to
(Continued from previous page)
${ }^{94}$ Commission Staff developed population estimates for 2011-2017 by updating the 2010 census block population estimates. These estimates are based upon annual U.S. Census mid-year county (or county-equivalent) level population and housing unit estimates for the fifty states, the District of Columbia, and Puerto Rico. These data are used in conjunction with U.S. Census Bureau Tiger data to indicate new roads, i.e., new housing development, to distribute population amongst the census blocks comprising each county (or county-equivalent). Federal Communications Commission, Staff Block Estimates, https://www.fcc.gov/reports-research/data/staff-blockestimates.
${ }^{95}$ The fixed terrestrial estimates using the SBI data are based upon deployment data for the following services: Asymmetric xDSL, Symmetric xDSL, Other Wireline (all copper-wire based technologies other than xDSL), Cable Modem-DOCSIS 3.0, Cable Modem-Other, optical carrier (fiber to the home or FTTH), Fixed Terrestrial Wireless (provisioned/equipped over licensed spectrum or over spectrum used on an unlicensed basis), Electric Power Line, and All Other. For 2013, we exclude the satellite deployment data from our analysis because the December 2013 SBI data for satellite show significant inconsistencies in the data. 2015 Report, 30 FCC Rcd at 1416, para. 76.
${ }^{96}$ See infra Appendix 9 (Deployment (Millions) of Fixed Services at Different Speed Tiers (2014-2017)).
${ }^{97}$ More specifically, the data indicate that satellite service offering $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ speeds is available to all but $0.03 \%$ of the population.
${ }^{98}$ While satellite signal coverage may enable operators to offer services to wide swaths of the country, overall satellite capacity may limit the number of consumers that can actually subscribe to satellite service at any one time. Notice, 33 FCC Rcd at 8392, para. 17, n.46; 2018 Report, 33 FCC Rcd at 1681, para. 51, n. 148.
${ }^{99}$ See infra Appendix 9 (Deployment (Millions) of Fixed Services at Different Speed Tiers (2014-2017)).
${ }^{100}$ For fixed services, the Commission has been able to rely upon FCC Form 477 reported maximum advertised speeds to track actual speeds. However, we note that the relationship between actual speeds and the advertised speed reported in the FCC Form 477 for mobile services is more complex because minimum advertised speed is
(continued....)
which the typical consumer receives speeds of $10 \mathrm{Mbps} / 3 \mathrm{Mbps}$ or higher, and these data provide us with the greatest number of observations of actual speeds that customers receive. ${ }^{105}$ As the Commission has done previously, our analysis of the availability of mobile LTE services with a median speed of 10 $\mathrm{Mbps} / 1 \mathrm{Mbps}$, includes actual speed test data in counties with at least 300 test observations in each time frame. ${ }^{106}$ The more densely populated counties have a higher likelihood of being included in this analysis because there generally are more observations in those geographical areas with a higher population density. Although we do not have reliable on-the-ground speed data for every county in the United States, the Ookla data cover approximately $93 \%$ of the population of the United States, ${ }^{107}$ and as such, can reasonably be used to show progress over time.
31. Schools. For purposes of this Report, we assess deployment in elementary and secondary schools based upon the best publicly available data, specifically that analyzed in EducationSuperHighway's 2018 State of the States Report and the Consortium for School Networking (CoSN) 2018-2019 Annual Infrastructure Report. ${ }^{108}$ The 2018 State of the States Report tracks public schools' progress toward the Commission's goals for K-12 connectivity using the Commission's FCC Form 471 data and additional outreach efforts to E-Rate applicants for clarifications on their broadband purchases. ${ }^{109}$ The 2018 State of the States Report provides an analysis of schools meeting the connectivity goals using fiber and other scalable broadband connections, using a sample of public school districts in each state. ${ }^{110}$ CoSN's report summarizes the results of its survey of a much smaller number of school districts regarding the current state of broadband and technology infrastructure in U.S. school systems. ${ }^{111}$

## B. Broadband Deployment Estimates

32. In Figures 1 through 3 below, we present our measurement of deployment, evaluating progress by comparing deployment in the present year to deployment in the previous four years. ${ }^{112}$ For purposes of this Report, we aggregate federally recognized Tribal lands into 4 Tribal Lands categories, the Lower 48 States; ${ }^{113}$ Tribal Statistical Areas, ${ }^{114}$ Alaskan Villages, ${ }^{115}$ and Hawaiian Homelands. ${ }^{116}$ We
(Continued from previous page)
reported by the mobile providers, and different mobile providers estimate their minimum advertised speed based on various points of their actual speed distribution. 2018 Report, 33 FCC Rcd at 1678, para. 46 \& n.133. By contrast, the Ookla data provide us with the actual speeds that consumers experience.
${ }^{101}$ The SBI data for mobile services are not directly comparable to the Form 477 data. First, we are unable to limit the SBI data to LTE technology because the SBI data do not identify mobile services by technology. Second, the SBI data include mobile coverage area boundaries by maximum advertised download/upload speeds whereas the Form 477 collects data for mobile services by minimum advertised speeds. 2018 Report, 33 FCC Rcd at 1678-79, paras. 46-47.
${ }^{102}$ See, e.g., 2018 Report, 33 FCC Rcd at 1678, para. 46.
${ }^{103}$ We note that while the current Form 477 deployment data is an improvement over the deployment data previously available on a national scale, the Commission has initiated a rulemaking to consider further improvements in the Form 477 data collection process, as noted above. See generally Modernizing the FCC Form 477 Data Program, 32 FCC Rcd 6329. Also, we note that questions have arisen in various contexts regarding the bases for certain filings. For example, in the context of the Mobility Fund Phase II (MF-II) proceeding, the Commission determined that a separate, one-time data collection was necessary to ensure that all mobile LTE providers were using a consistent standard when generating maps of their deployment of 5 Mbps downstream 4G LTE coverage. Connect America Fund, Universal Service Reform-Mobility Fund, Order on Reconsideration and Second Report and Order, 32 FCC Rcd 6282, 6287, 6298, paras. 7, 10, 34 (2017). No final conclusions regarding those data and MF-II eligibility have yet been drawn since, in December 2018, the Commission launched an investigation into potential violations of MF-II mapping rules by service providers in submitting the data and the MF-II challenge process has not yet concluded. See News Release, FCC, FCC Launches Investigation Into Potential Violations of Mobility Fund Phase II Mapping Rules (Dec. 7, 2018), https://docs.fcc.gov/public/attachments/DOC355447A1.pdf.
report on deployment for each combination of fixed and mobile deployment. ${ }^{117}$

## 1. Deployment of Fixed Advanced Telecommunications Capability

33. Figure 1 shows the deployment of fixed terrestrial broadband at speeds of $25 \mathrm{Mbps} / 3$ Mbps , the Commission's current benchmark for fixed advanced telecommunications capability. As of year-end $2017,93.5 \%$ of the overall population had coverage of such services, up from $91.9 \%$ in 2016. Nonetheless, the gap in rural and Tribal America remains notable: over $26 \%$ of Americans in rural areas and $32 \%$ of Americans in Tribal lands lack coverage from fixed terrestrial $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ broadband, as compared to only $1.7 \%$ of Americans in urban areas. The data demonstrate, however, that the gap between urban and rural or Tribal areas has narrowed each year over the last five years.

(Continued from previous page)
${ }^{104}$ We note that generally, crowd-sourced data can provide the benefit of generating a large volume of data at a very low cost and of measuring actual consumer experience on a network in a wide variety of locations, indoor and outdoor. Crowd-sourced data, however, are often not collected pursuant to statistical sampling techniques, and may require adjustments to construct a representative sample from the raw data. For instance, crowd-sourced mobile data come from a self-selected group of users, and there often is little control for most tests regarding such parameters as when people implement the test, whether the test is performed indoors or outdoors, the geographic location of the tester, and the vintage of the consumer's device. 2018 Report, 33 FCC Rcd at 1679, para. 47, n. 139.
${ }^{105}$ The data collected by the Ookla Speedtest mobile app include test results for download speed, upload speed, and latency, as well as other information, such as the location of the test and operating system of the handset. The results presented in this Report are based on tests that were executed in the second half of the year for 2014, 2015, 2016 and 2017 on the smartphone's cellular connection, and using LTE technology. Test data was excluded if it had missing GPS location data or if the reported download or upload speed was less than zero or greater than 100 Mbps . Multiple tests by a single phone in the same locality and in the same day were averaged (using the median).
${ }^{106} 2018$ Report, 32 FCC Rcd at 1679, para. 47. This sample size threshold applies to each county for each time frame ( $2 \mathrm{H} 2014,2 \mathrm{H} 2015,2 \mathrm{H} 2016$, and 2 H 2017 ): if a county does not have at least 300 observations during any of these time frames, it is not included in the actual speed analysis. The 300 observations threshold is a conservative threshold, and is based on a general mean and median sample size analysis. We consider a county to have a sufficient sample size if there are at least 300 total observations in each of the four years after the cleaning and trimming rules have been applied. County geography is assigned using the latitude and longitude coordinates that are collected during each Ookla speed test, via the device's GPS. This allows us to evaluate actual median upload and download speeds at the county level, in each year of the four-year time period, for counties in which approximately $93 \%$ of the U.S. population live (not including the U.S. Territories). If a census block has LTE coverage of at least $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$ based on the Form 477 minimum advertised speeds, it is assigned the median upload and download speeds that are calculated for the county in which it is located, which allows us to evaluate the mobile broadband speeds for each census block within the United States.
34. In 2016, $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ satellite service was reported for the first time in the Form 477 data collection. ${ }^{118}$ If we include satellite service in our estimate, fixed $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ service is deployed to nearly every American as of December 2017. ${ }^{119}$

## 2. Deployment of Mobile LTE

35. Figure 2a shows that as of year-end 2017, approximately $99.8 \%$ of the American population lives in geographical areas covered by mobile LTE with a minimum advertised speed of 5 $\mathrm{Mbps} / 1 \mathrm{Mbps},{ }^{120}$ while approximately $98 \%$ had such coverage in 2013. Further, between 2013 and 2017, the percentage of Americans living in rural areas with coverage of LTE at $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$ increased from approximately $90 \%$ to approximately $99 \% .{ }^{121}$ The percentage of Americans living in Tribal lands with coverage of mobile LTE rose from approximately $87 \%$ in 2013, to $97 \%$ in 2017. Figure 2 b also shows some improvement since 2016 in the deployment of mobile LTE services at median speeds of $10 \mathrm{Mbps} / 3$ Mbps for the United States and urban areas.

Fig. 2a

## Deployment (Millions) of Mobile LTE with a Minimum Advertised Speed of 5 Mbps/1 Mbps

(Continued from previous page)
${ }^{107}$ The percentage of the population in our analysis is based on the total U.S. population, not including the U.S. Territories, for which we separately report our results. The Ookla speed data population in Figure $2 b$ is a subset of the total U.S. population evaluated in Figure 2a, and refers to the population in the counties for which we believe there are a statistically significant number of on-the-ground speed test observations. We do not have Ookla speed data for the U.S. Territories. In 2017, for example, the U.S. population, not including the U.S. territories, was 325.716 million, whereas in Figure 2b, we use 302.940 million as the basis for our 2017 calculations. The population evaluated figure, 302.940 million, is the population for the U.S., excluding the U.S. Territories and the population in the counties without a sufficient number of reliable on-the-ground speed test data observations.

of reservation only; and (4) legal, federally-recognized American Indian area consisting of off-reservation trust land only.

114 Tribal statistical areas are statistical American Indian areas. These are defined for a federally recognized Tribe that does not have reservation or off-reservation trust land, specifically a Tribal designated statistical area (TDSA) or Oklahoma Tribal statistical area (OTSA).
115 Alaskan Native village statistical area.
${ }^{116}$ Hawaiian Home Lands established by the Hawaiian Homes Commission Act of 1921.
${ }^{117}$ Data reported in this Report differs from data reported in the Broadband Deployment section of the December 2018 Communications Marketplace Report in two minor respects. See Communications Marketplace Report at paras. 247-64. First, data reported at speeds of $10 \mathrm{Mbps} / 1 \mathrm{Mbps}$ or greater in this Report are slightly different because of corrected Form 477 providers' data that were recently submitted and thus not included in the Communications Marketplace Report. Second, the demographic data presented in this Report relies upon recently released income and poverty measures from the American Community Survey (ACS) Five-Year Estimates for 20132017 whereas the Communications Marketplace Report relied upon the ACS Five-Year Estimates for 2012-2016.

1182018 Report, 32 FCC Rcd at 1681, para. 51.
${ }^{119}$ Id. at 1681, para. 51, n.148; see infra Appendix 9 (Deployment (Millions) of Fixed Services at Different Speed Tiers (2014-2017)). These data could overstate the deployment of these services. The data indicate that fixed 25 $\mathrm{Mbps} / 3 \mathrm{Mbps}$ services are deployed to $93 \%$ of Americans residing in the U.S. Territories.
${ }^{120}$ We present additional deployment data for Mobile LTE services for each state, the District of Columbia, the U.S. Territories in the Appendices and each category of Tribal land in the appendix. See infra Appendices 1, 2 and 3 (reporting figures for each state and the District of Columbia), Appendix 4 (reporting figures for each U.S. Territory), and Appendix 7 (reporting figures for Tribal lands and states).

## 3. Deployment of Fixed Services and Mobile LTE

36. Figure 3a shows deployment across all geographic areas for both fixed terrestrial 25 $\mathrm{Mbps} / 3 \mathrm{Mbps}$ services and $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$ mobile LTE. ${ }^{123}$ Overall, as of year-end 2017, approximately 304 million Americans, or $93.4 \%$ of the population, are covered by both $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ fixed terrestrial service and mobile LTE with a minimum advertised speed of $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$, an increase from $91.7 \%$ in 2016. ${ }^{124}$ In rural areas, $73.2 \%$ of Americans are covered by both services, as opposed to $98.3 \%$ of Americans in urban areas, up from $67.1 \%$ and $97.7 \%$, respectively, in 2016. On Tribal lands, $67.6 \%$ of Americans have coverage for both services up from $62.4 \%$ in 2016 . Figure $3 b$ shows deployment of fixed terrestrial speeds of $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ and mobile LTE with median speed of $10 \mathrm{Mbps} / 3 \mathrm{Mbps}$. As of December 31, 2017, approximately 260 million Americans live in geographic areas covered by both services, an increase of 10.1 million Americans since 2016.

(Continued from previous page)
${ }^{121}$ The results reported in Figure 2a for 2013 are based upon SBI data for mobile services at maximum advertised speeds of $6 \mathrm{Mbps} / 768 \mathrm{kbps}$ as compared to the Form 477 data for mobile services which are based on minimum advertised speeds of $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$.
${ }^{122}$ The analyses in Figures 2a, 3a and 3c include all areas of the United States and are based on Form 477 data. In contrast, the analyses in Figures 2b, 3b and 3d are based on Ookla data and exclude any county (and its associated census blocks) for which there is insufficient Ookla data. In addition, we do not report results for Tribal lands in Figures $2 \mathrm{~b}, 3 \mathrm{~b}$, and 3 d because we have concerns with the representativeness of the Ookla data for these areas. Tribal areas not only typically have fewer speed tests, but there are also fewer of these areas relative to urban and rural areas. Thus, deployment estimates for tribal areas are more sensitive to sample variance. The population figure reported in the bottom row of these figures is the population evaluated for the reported time period and the percentage is the percentage of the U.S. population evaluated. Accordingly, the 302.94 population evaluated figure for 2017 in Figure $2 b$ represents $93 \%$ of the overall population in the 50 U.S. states (i.e., $302.94 / 325.716=0.93$ ). Regardless of our deployment estimates for mobile LTE with a median speed of $10 \mathrm{Mbps} / 3 \mathrm{Mbps}$, Americans residing in the counties without sufficient Ookla data to create a statistically significant county sample to be included in Figures 2b, 3b, and 3d, receive minimum advertised or expected speeds of $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$, and likely receive mobile services with speeds higher than $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$.
${ }^{123}$ We present additional deployment data for terrestrial fixed $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ and/or Mobile LTE services in an appendix. See infra Appendices 1, 2 and 3 (reporting figures for each state and the District of Columbia), Appendix 4 (reporting figures for each U.S. Territory), Appendix 5 (reporting figures for each state, the District of Columbia, and each county), Appendix 6 (reporting figures by urban and rural areas within each state, the District of Columbia and each county), and Appendix 7 (reporting figures for each U.S. Tribal lands).
${ }^{124}$ The results reported for 2013 are based upon SBI data for mobile services at maximum advertised speeds of 6 Mbps/768 kbps as compared to the Form 477 data which are based on minimum advertised speeds of $5 \mathrm{Mbps} / 1$ Mbps.

## 4. Additional Deployment Estimates

38. Figure 4 shows deployment of fixed terrestrial services at various speed tiers since
39. ${ }^{125}$ As of December 2017, fixed terrestrial service of $10 \mathrm{Mbps} / 1 \mathrm{Mbps}$ is deployed to $96.9 \%$ of all Americans, up from $95.8 \%$ in 2016, and deployment of fixed terrestrial $50 \mathrm{Mbps} / 5 \mathrm{Mbps}$ service is deployed to $91.6 \%$ of the population, up from $90.3 \%$ in 2016. From 2016 to 2017, the deployment of 100 $\mathrm{Mbps} / 10 \mathrm{Mbps}$ increased from $75.7 \%$ to $88.5 \%$ of the population, and the deployment of $250 \mathrm{Mbps} / 25$ Mbps increased from $43.7 \%$ to $58.8 \%$ of the population. Deployment in rural areas and on Tribal lands lags behind deployment in urban areas at all five speed tiers, but the data show year-over-year improvements for all speeds in these areas.

39. Figure 5 presents deployment data for fixed terrestrial $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ service and mobile LTE service with a speed of at least $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$ from 2013 through 2017 for the U.S. Territories. ${ }^{126}$ As of 2017, Puerto Rico and the U.S. Virgin Islands accounted for over $92 \%$ of the population in the U.S. Territories. The data suggest that as of December 2017, $85.8 \%$ of Americans in the U.S. Territories were covered by $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ fixed terrestrial service and $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$ mobile LTE, which represented an increase of approximately 21 percentage points since 2013. The 2017 data may significantly overstate current deployment in the U.S. Territories, however, given that the deployment data submitted by providers do not appear to reflect infrastructure damage caused by Hurricanes Maria and Irma in 2017 even though the December 2017 data postdates the hurricanes and should reflect such damage. Aside from the potential impact of the hurricanes, there appear to be anomalies in the underlying data presented in Figure 5. ${ }^{127}$ Thus, the changes in reported deployment in the Form 477 data may not reflect actual changes in deployment.

## C. Demographic Data

40. Figures 6 and 7 compare the available demographic data for Americans with and without coverage to fixed terrestrial $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ service and mobile LTE. ${ }^{128}$ Figure 6 presents this analysis for the United States as a whole, urban areas, rural areas, and Tribal lands for fixed terrestrial $25 \mathrm{Mbps} / 3$ Mbps service and mobile LTE with a minimum advertised speed of $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$ in 2017. ${ }^{129}$ The data show that generally Americans in areas where these services are deployed typically live in census block groups with a lower percentage of households living in poverty, and with higher average populations, population densities, per capita incomes, and median household incomes than Americans living in areas without coverage by these services.

Fig. 6

## D. Tribal Lands Data

44. In Figures 10 and 11 we present additional deployment estimates for Americans living on Tribal lands by Tribal lands category. ${ }^{132}$ The Commission's data indicate that deployment in rural Tribal lands continue to lag deployment in urban Tribal lands.
45. Figure 10 presents deployment on Tribal lands from 2013 to 2017 of both fixed terrestrial $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ services and mobile LTE service with a speed of at least $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$. Overall, in 2017, $67.6 \%$ of Tribal lands are covered by fixed terrestrial $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ services and mobile LTE with a speed of $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$ based on Form 477 data. Rural Tribal lands continue to lag behind urban Tribal lands, with only $45.4 \%$ of all Tribal lands in rural areas having deployment of both services, as compared to $91.6 \%$ of Tribal lands in urban areas.

46. In Figure 11 we present deployment estimates for fixed terrestrial $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ service and mobile LTE service with a speed of at least $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$ on Tribal lands. As of December 31, 2017, fixed terrestrial $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ services is deployed to $67.9 \%$ of Americans on Tribal Lands, $97 \%$ are covered by mobile LTE $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$, and $67.6 \%$ of Americans on Tribal lands are covered by both services. The figures show variability in deployment across the Tribal lands categories, with the least deployment occurring in Alaskan Villages and the Lower 48 states.

Fig. 11
Deployment (Millions) of Fixed Terrestrial 25 Mbps/3 Mbps Services and/or Mobile LTE with a Minimum Advertised Speed of $5 \mathrm{Mbps} / \mathbf{1} \mathrm{Mbps}$ on Tribal Lands (As of December 31, 2017)

|  | Total Pop. | Fixed 25 Mbps/ 3 Mbps |  | Mobile LTE 5 Mbps/1 Mbps |  | Fixed 25 Mbps/3 <br> Mbps and Mobile <br> LTE $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$ |  | Fixed $25 \mathrm{Mbps} / 3$ <br> Mbps or Mobile <br> LTE $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$ |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Pop. | \% | Pop. | \% | Pop. | \% | Pop. | \% |
| Tribal Lands | 4.017 | 2.727 | 67.9\% | 3.896 | 97.0\% | 2.716 | 67.6\% | 3.907 | 97.3\% |
| Alaskan Villages | 0.265 | 0.154 | 58.0\% | 0.197 | 74.3\% | 0.151 | 57.0\% | 0.200 | 75.4\% |
| Hawaiian Homelands | 0.034 | 0.030 | 89.4\% | 0.034 | 99.9\% | 0.030 | 89.4\% | 0.034 | 99.9\% |
| Lower 48 States | 1.117 | 0.604 | 54.1\% | 1.069 | 95.7\% | 0.595 | 53.3\% | 1.078 | 96.5\% |
| Tribal Statistical Areas | 2.601 | 1.939 | 74.6\% | 2.596 | 99.8\% | 1.939 | 74.5\% | 2.596 | 99.8\% |

## E. Adoption Data

47. We also include an assessment of adoption because adoption of services is necessarily a lower bound on fixed deployment. ${ }^{133}$ We report adoption rates based upon data as of December 2013 to December 2017. The reported adoption rates are the ratio of residential Form 477 data subscriptions to fixed terrestrial services at the designated speed divided by the total number of households in the area where our Form 477 deployment data indicated that fixed terrestrial services are deployed. ${ }^{134}$

[^10]48. Figure 12 shows the overall adoption rates, ${ }^{135}$ using Form 477 subscribership data, from 2013 through 2017 for fixed terrestrial services for the U.S. as a whole, urban and non-urban core areas, and Tribal lands. The data show year-to-year increases across the vast majority of areas, including Tribal lands, for adoption of $10 \mathrm{Mbps} / 3 \mathrm{Mbps}, 25 \mathrm{Mbps} / 3 \mathrm{Mbps}$, $50 \mathrm{Mbps} / 3 \mathrm{Mbps}$, $100 \mathrm{Mbps} / 10 \mathrm{Mbps}$, and 250 $\mathrm{Mbps} / 25 \mathrm{Mbps}$ fixed terrestrial services. ${ }^{136}$

Fig. 12

## Adoption Rates for Fixed Terrestrial Services

|  | 2013 | 2014 | 2015 | 2016 | 2017 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| $10 \mathrm{Mbps} / 1 \mathrm{Mbps}$ |  |  |  |  |  |
| United States | 53.4\% | 56.0\% | 62.2\% | 66.3\% | 69.7\% |
| Non-Urban Core Areas | 48.9\% | 49.7\% | 55.8\% | 60.2\% | 63.4\% |
| Urban Core Areas | 56.7\% | 60.7\% | 67.0\% | 71.0\% | 74.7\% |
| Tribal Lands | 33.0\% | 35.5\% | 42.4\% | 43.1\% | 46.2\% |
| Non-Urban Core Areas | 49.2\% | 50.0\% | 56.1\% | 60.6\% | 63.8\% |
| Urban Core Areas | 28.9\% | 30.6\% | 36.1\% | 36.9\% | 40.4\% |
| $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ |  |  |  |  |  |
| United States | 29.7\% | 38.5\% | 48.1\% | 53.5\% | 60.2\% |
| Non-Urban Core Areas | 28.5\% | 34.4\% | 43.2\% | 48.9\% | 55.1\% |
| Urban Core Areas | 30.4\% | 41.3\% | 51.5\% | 56.9\% | 64.0\% |
| Tribal Lands | 31.9\% | 27.3\% | 31.7\% | 33.4\% | 38.0\% |
| Non-Urban Core Areas | 28.5\% | 34.5\% | 43.4\% | 49.2\% | 55.4\% |
| Urban Core Areas | 27.8\% | 23.3\% | 28.5\% | 30.3\% | 34.6\% |
| $50 \mathrm{Mbps} / 5 \mathrm{Mbps}$ |  |  |  |  |  |
| United States | NA | 24.8\% | 33.9\% | 44.4\% | 54.8\% |
| Non-Urban Core Areas | NA | 19.9\% | 27.8\% | 41.1\% | 50.7\% |
| Urban Core Areas | NA | 28.0\% | 38.0\% | 46.7\% | 57.8\% |
| Tribal Lands | NA | 22.7\% | 25.0\% | 28.9\% | 34.2\% |
| Non-Urban Core Areas | NA | 20.0\% | 27.9\% | 41.3\% | 51.0\% |

${ }^{135} \mathrm{We}$ have insufficient information to determine the proportion of the population for which $50 \mathrm{Mbps} / 5 \mathrm{Mbps}$ service is deployed prior to December 31, 2014. See 2015 Report, 30 FCC Rcd at 1413, para. 69, n.278. The reported adoption rates for 2014 to 2017 are based upon the Form 477 deployment data and subscriber data as of December 31, 2014, December 31, 2015, December 31, 2016, and December 31, 2017. The reported adoption rates for 2013 are based upon the SBI Deployment data as of December 31, 2013, and the Form 477 subscriber data as of December 31, 2013. For the 2013 data, a 768 kbps upload speed is used as a proxy for a 1 Mbps upload speed because this is the speed closest to 1 Mbps that was collected in the SBI data collection and the FCC's Form 477 data collection during this time period. See id. at 1413.
${ }^{136}$ Prior to the Commission's revision of the Form 477 data collection, which is reflected for the first time in the 2014 data, Form 477 filers did not report subscribers specifically at the $50 \mathrm{Mbps} / 5 \mathrm{Mbps}$ or the $250 \mathrm{Mbps} / 25 \mathrm{Mbps}$ service tiers. This does not indicate there were no subscribers to these services in 2013.

|  | 2013 | 2014 | 2015 | 2016 | 2017 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Urban Core Areas | NA | 18.0\% | 20.4\% | 25.3\% | 30.9\% |
| $100 \mathrm{Mbps} / 10 \mathrm{Mbps}$ |  |  |  |  |  |
| United States | 0.9\% | 11.2\% | 16.7\% | 19.2\% | 29.6\% |
| Non-Urban Core Areas | 0.8\% | 11.7\% | 16.4\% | 17.8\% | 27.0\% |
| Urban Core Areas | 0.9\% | 11.0\% | 16.9\% | 20.0\% | 31.4\% |
| Tribal Lands | 0.3\% | 7.1\% | 7.4\% | 10.5\% | 18.3\% |
| Non-Urban Core Areas | 0.8\% | 11.8\% | 16.6\% | 17.9\% | 27.1\% |
| Urban Core Areas | 0.3\% | 7.4\% | 6.4\% | 9.8\% | 17.0\% |
| 250 Mbps/25 Mbps |  |  |  |  |  |
| United States | NA | 2.5\% | 4.2\% | 1.8\% | 4.1\% |
| Non-Urban Core Areas | NA | 3.0\% | 6.7\% | 2.3\% | 4.0\% |
| Urban Core Areas | NA | 2.3\% | 3.1\% | 1.6\% | 4.1\% |
| Tribal Lands | NA | 0.1\% | 1.4\% | 1.8\% | 4.4\% |
| Non-Urban Core Areas | NA | 3.0\% | 6.7\% | 2.3\% | 4.0\% |
| Urban Core Areas | NA | 0.2\% | 1.7\% | 2.1\% | 4.5\% |

49. Figure 13 reports average county level overall adoption rates for fixed terrestrial services by speed tier against the quartile ranking for median household income, population density, the poverty rate, and the proportion of the population that resides in a rural area. These data suggest that the average household adoption rate increases with median household income and population density, although the adoption rate decreases as the poverty rate and rural population rate increase.

Fig. 13
Average County Overall Adoption Rate for Fixed Terrestrial Services by County Level Demographic Variable (As of December 31, 2017)

|  | $\begin{array}{\|c} \hline 10 \mathrm{Mbps} / \\ 1 \mathrm{Mbps} \\ \hline \end{array}$ | $\begin{array}{\|c\|} \hline 25 \end{array} \mathbf{M b p s} /{ }^{3} \text { Mbps }$ | $\begin{array}{\|c} \hline 50 \mathrm{Mbps} / \\ 5 \mathrm{Mbps} \\ \hline \end{array}$ | $\begin{array}{\|c} \hline 100 \mathrm{Mbps} / \\ 10 \mathrm{Mbps} \\ \hline \end{array}$ | $\begin{array}{\|c\|} \hline 250 \mathrm{Mbps} / \\ 25 \mathrm{Mbps} \\ \hline \end{array}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| County Median Household Income (\$2017) |  |  |  |  |  |
| First Quartile (Lowest Median Household Income) | 33.8\% | 24.5\% | 20.5\% | 15.6\% | 1.9\% |
| Second Quartile | 42.3\% | 39.6\% | 30.6\% | 15.0\% | 3.8\% |
| Third Quartile | 49.0\% | 37.9\% | 33.3\% | 16.4\% | 5.1\% |
| Fourth Quartile (Highest Median Household Income) | 63.1\% | 53.7\% | 47.8\% | 23.3\% | 4.5\% |

|  | $\begin{array}{\|c\|c\|} \hline 10 & \text { Mbps/ } \\ 1 & \text { Mbps } \\ \hline \end{array}$ | $\begin{array}{\|c\|} \hline 25 \mathrm{Mbps} / \\ 3 \mathrm{Mbps} \\ \hline \end{array}$ | $50 \mathrm{Mbps} /$ 5 Mbps | $\begin{aligned} & 100 \text { Mbps/ } \\ & 10 \mathrm{Mbps} \\ & \hline \end{aligned}$ | $\begin{gathered} 250 \mathrm{Mbps} / \\ 25 \mathrm{Mbps} \\ \hline \end{gathered}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| County Population Density |  |  |  |  |  |
| First Quartile (Lowest Population Density) | 40.1\% | 25.8\% | 21.7\% | 9.5\% | 5.0\% |
| Second Quartile | 34.6\% | 34.1\% | 23.6\% | 11.4\% | 2.6\% |
| Third Quartile | 44.7\% | 37.2\% | 33.8\% | 21.3\% | 3.6\% |
| Fourth Quartile (Highest Population Density) | 68.6\% | 58.0\% | 52.1\% | 26.9\% | 4.6\% |
| County Poverty Rate |  |  |  |  |  |
| Fourth Quartile (Lowest Poverty Rate) | 58.4\% | 48.6\% | 42.8\% | 21.0\% | 4.8\% |
| Third Quartile | 48.9\% | 39.3\% | 34.1\% | 17.7\% | 4.6\% |
| Second Quartile | 44.4\% | 41.6\% | 33.0\% | 20.7\% | 3.8\% |
| First Quartile (Highest Poverty Rate) | 36.3\% | 26.0\% | 22.2\% | 10.9\% | 2.2\% |
| County Rural Population Rate |  |  |  |  |  |
| Fourth Quartile (Lowest Rural Population Rate) | 67.3\% | 57.7\% | 51.7\% | 25.3\% | 5.4\% |
| Third Quartile | 48.3\% | 39.1\% | 35.0\% | 16.4\% | 3.3\% |
| Second Quartile | 36.7\% | 35.3\% | 24.8\% | 17.8\% | 2.9\% |
| First Quartile (Highest Rural Population Rate) | 35.6\% | 23.1\% | 20.0\% | 9.9\% | 3.6\% |

## F. Schools and Classrooms Data

50. We continue to measure availability of advanced telecommunications capability in "elementary and secondary schools and classrooms" ${ }^{137}$ using a short-term and long-term goal for broadband connectivity to schools of 100 Mbps per 1,000 students and staff and 1 Gbps per 1,000 students and staff, respectively. ${ }^{138}$ According to the 2018 State of the States Report, $98 \%$ of school districts or 44.7 million students, now meet the Commission's short-term connectivity goal of 100 Mbps per 1,000 users, up from 39.2 million students in 2017. ${ }^{139}$ However, this means that 2.3 million students are not receiving broadband service that meets the short-term connectivity goal. ${ }^{140}$
51. Regarding the long-term connectivity goal for schools of 1 Gbps per 1,000 users, the 2018 State of the States Report estimates that, based on the most recent data, $28 \%$ of school districts currently meet the goal, which is up from $22 \%$ in 2017 and just $9 \%$ in $2015 .{ }^{141}$ Similarly, CoSN's report notes that $36 \%$ of school districts were meeting the long-term connectivity goal, more than double the number of districts reporting progress toward that goal in 2017. ${ }^{142}$ The 2018 State of the States Report

[^11]also finds that nearly half of the smallest school districts in the United States, averaging just 200 students and in rural areas, are already meeting the long-term goal. ${ }^{143}$ EducationSuperHighway estimates that 1,356 schools still need access to fiber in order to meet the short- and long-term connectivity goals, down $34 \%$ from the 2,049 schools without access to fiber in 2017 , and $86 \%$ from the 9,500 schools in $2015 .{ }^{144}$

## V. COMMISSION EFFORTS TO CLOSE THE DIGITAL DIVIDE

52. The 2018 Report described the many actions the Commission has taken to encourage deployment of advanced telecommunications capability and close the digital divide. ${ }^{145}$ Here, we discuss the Commission's actions to spur broadband deployment and close the digital divide since issuing the 2018 Report.

## A. Reducing Barriers to Investment

53. To close the digital divide, it is essential to remove regulatory barriers to investment. Regulatory barriers unnecessarily delay broadband buildouts, slow transitions from legacy networks and services to next-generation networks, and impede wireless infrastructure projects to deploy advanced networks.
54. Wireless Infrastructure. In March 2018, the Commission adopted the Wireless Infrastructure Second Report and Order, which: (1) excluded from National Historic Preservation Act (NHPA) and the National Environmental Policy Act (NEPA) review certain small wireless facilities; ${ }^{146}$ (2) clarified procedures for engaging Tribal Nations and Native Hawaiian Organizations (NHOs) in historic preservation review; ${ }^{147}$ and (3) exempted from NEPA review requirements certain structures placed on flood plains. ${ }^{148}$ The decisions in that Order are intended to expedite the deployment of wireless infrastructure. And according to an Accenture analysis, the Order will reduce small cell deployment costs by about $\$ 1.6$ billion over the next 8 years. ${ }^{149}$
55. In September 2018, the Commission adopted the Wireless Infrastructure Declaratory Ruling and Third Report and Order, addressing state and local barriers to deployment. ${ }^{150}$ State and local zoning rules for erecting towers and other structures or attaching equipment to pre-existing towers and structures (e.g., rooftops, water tanks, power lines, and utility poles) can affect the timing and cost of deploying mobile wireless networks. Regulatory delay can slow entry, and local regulatory fees can represent sunk costs that can deter or diminish entry. Thus, regulatory fees and regulatory delays can be a significant barrier to entry. ${ }^{151}$ Siting fees such as excessive one-time application fees, annual recurring

[^12]fees, unreasonable or discriminatory gross revenue fees, and franchise or use fees may be especially burdensome to smaller providers and may prevent or discourage investment. In addition, review processes designed for large macro cells may be applied to small cell deployments in some localities. ${ }^{152}$ These review processes could pose significant barriers to entry or expansion because of the large number of small cells that need to be deployed relative to large towers. ${ }^{153}$ The review processes may be less important for small cells because their deployment causes less disruption to an area than the deployment of large towers. ${ }^{154}$ In addition, state and local zoning requirements may prevent or delay entry and expansion by requiring that all facilities along rights-of-way be underground, or by imposing burdensome and/or unpublished aesthetic restrictions. ${ }^{155}$
56. In the Declaratory Ruling, the Commission reaffirmed that a state or local legal requirement constitutes an effective prohibition if it "materially limits or inhibits the ability of any competitor or potential competitor to compete in a fair and balanced legal and regulatory environment." ${ }^{156}$ The Declaratory Ruling also applied that standard in the context of certain fees charged in connection with the deployment of small wireless facilities, noting, for instance, that such fees may not exceed a reasonable approximation of the local government's costs. ${ }^{157}$ The Third Report and Order established two new "shot clocks" for small wireless facilities, codified existing shot clocks for other wireless facilities, and clarified that failure to act within the shot clock period presumptively has the effect of prohibiting personal wireless services, in violation of section 332(c) of the Communications Act. ${ }^{158}$
57. Wireline Infrastructure. To further expand next-generation networks and services, in June 2018, the Commission adopted a Second Report and Order eliminating unnecessary impediments and costs to timely network upgrades, while maintaining protections for consumers and enabling providers to invest in next-generation networks. ${ }^{159}$ Through these reforms, the Commission continued to build on the work begun in 2017 to reform our copper retirement, network change disclosure, and discontinuance processes and remove regulatory barriers causing unnecessary costs or delay to deployment of next-generation networks. ${ }^{160}$
58. Also in June 2018, the Commission set aside enforcement of rules that were unfairly driving up the cost of broadband service for the customers of some rural providers. ${ }^{161}$ Unlike all other

[^13]ISPs, our rules require certain small, rural providers to pay into the USF fees on the revenues they earn from broadband Internet access transmission service. ${ }^{162}$ These fees ultimately get passed on to their customers. To level the playing field and reduce the cost of broadband in many rural areas, the Commission granted a petition for forbearance, declining to apply that requirement for these rural carriers. ${ }^{163}$
59. In August 2018, the Commission adopted the Third Report and Order and Declaratory Ruling designed to speed the process and reduce the costs of attaching new network facilities to utility poles. ${ }^{164}$ Consistent with the recommendations of the Broadband Deployment Advisory Committee (BDAC), ${ }^{165}$ the Order establishes a new pole attachment process that includes OTMR, in which the new attacher performs all make-ready work. ${ }^{166}$ Under OTMR, the new attacher moves existing attachments and performs all other work required to make the pole ready for a new attachment. ${ }^{167}$ This process allows the party with the strongest incentive-the new attacher-to prepare the pole quickly, rather than spreading the work across multiple parties. ${ }^{168}$ The process will not apply to more complicated attachments, or those attachments above the "communications space" of a pole, where safety and reliability risks are greater, but the Order improves current processes for attachments in these spaces. ${ }^{169}$ The Commission also codified and refined existing precedent requiring utilities to allow "overlashing," which helps maximize the usable space on the pole, and clarified that new attachers are not responsible for the costs of repairing preexisting violations of safety codes or construction standards discovered during the pole attachment process. ${ }^{170}$ Finally, the Commission addressed two forms of state and local regulatory barriers to deployment, clarifying that (1) it will preempt, on a case-by-case basis, state and local laws that inhibit the rebuilding or restoration of broadband infrastructure after a disaster; and (2) state and local moratoria on the deployment of telecommunications services and facilities are barred by section 253(a) by the Communications Act because they "prohibit or have the effect of prohibiting the ability of any entity to provide any interstate or intrastate telecommunications service." ${ }^{171}$

## B. Universal Service Funding

60. Universal service also played an essential role in deployment of broadband networks and encouraging competition. The Commission's Universal Service Fund (USF) provides funding to increase the availability of fixed and mobile broadband services in unserved and rural areas. ${ }^{172}$ The Fund targets

[^14]support to these areas and, as part of its oversight responsibilities, the Commission routinely considers ways to maximize the impact of available USF funding to support broadband deployment. ${ }^{173}$
61. High-Cost Reforms. Over the past two years, for example, the Commission has successfully conducted the Connect America Fund Phase II auction to award funding to service providers that commit to offer voice and broadband services to fixed locations in unserved high-cost areas. In February 2017, the Commission adopted a Report and Order and Order on Reconsideration finalizing bidding rules and establishing weights to compare bids in the auction. ${ }^{174}$ In August 2017, the Commission released a Public Notice proposing procedures to implement the Phase II auction. The Phase II auction, which offered up to nearly $\$ 2$ billion over the next decade to expand fixed, high-speed Internet service to unserved rural areas, ran from July 24, 2018 to August 21, 2018. ${ }^{175}$ At its conclusion, 103 bidders won $\$ 1.49$ billion over 10 years to provide fixed broadband and voice services to over 700,000 locations in 45 states. ${ }^{176}$ Separately, the Commission provided small, rural carriers with an infusion of over $\$ 500$ million to promote more high-speed broadband deployment in rural areas in March 2018. ${ }^{177}$
62. In December 2018, the Commission adopted revised model offers for rate-of-return carriers receiving model-based support and new model offers for rate-of-return carriers currently receiving legacy support; adopted a new budget for carriers remaining on legacy support based on uncapped 2018 claims (that will be increased by inflation annually); and adopted other measures to mitigate the regulatory burden on providers and encourage the efficient use of universal service support. ${ }^{178}$
63. Rural Health Care Reforms. In December 2017, the Commission issued a Notice of Proposed Rulemaking to review the Rural Health Care program and sought comment on ways to improve connectivity for health care providers in rural areas including whether to lift the program's funding cap to make additional money available for broadband to rural health care providers. ${ }^{179}$ In an accompanying Order, the Commission granted relief to individual rural health care providers facing potential funding

[^15]cuts in funding year 2017. ${ }^{180}$ In June 2018, the Commission adopted rules to increase the funding cap for the Rural Health Care program from $\$ 400$ million to $\$ 571$ million for funding year 2017 to prevent prorata funding reductions that could have disproportionally impacted rural health care providers, especially those in Alaska. ${ }^{181}$ The Commission also adopted rules to annually adjust the Rural Health Care program funding cap for inflation, beginning with funding year 2018, and to establish a process to carry-forward unused funds from past funding years for use in future funding years. ${ }^{182}$
64. E-Rate. To promote the deployment of high-speed networks to unserved and underserved schools and libraries, in January 2019, the Commission proposed to permanently eliminate the requirement that E-Rate applicants amortize over three years upfront, non-recurring category one charges of $\$ 500,000$ or more, including charges for special construction projects. ${ }^{183}$ The Commission also waived the amortization requirement while it considers its proposal. ${ }^{184}$ The amortization requirement previously had been suspended from funding years 2015 through 2018. ${ }^{185}$ The Commission found that suspending the requirement decreased administrative burdens associated with applying for E-Rate support; allowed applicants and service providers to receive disbursements for the full E-Rate supported portion of special construction projects sooner; and reduced uncertainty regarding the availability of funding. ${ }^{186}$
65. Connected Care Pilot Program. In August 2018, the Commission adopted a Notice of Inquiry exploring the creation of a pilot program to support the delivery of advanced telehealth services to low-income Americans. ${ }^{187}$ In that Notice of Inquiry, the Commission recognized that low-income consumers, especially those living in rural areas, lack access to affordable broadband and cannot benefit from connected care medical services. ${ }^{188}$ The Commission sought comment on the goals for a Connected Care pilot program, including increasing the deployment of broadband in unserved and underserved areas and how best to direct funds to efficiently encourage deployment. ${ }^{189}$ That proceeding remains open as the Commission deliberates on how best to proceed.
66. Disaster Recovery. The Commission has also been at the forefront of supporting areas

affected by natural disasters, in part through the use of USF funding. In October 2017, the Commission pledged to repair communications networks in Puerto Rico and the U.S. Virgin Islands damaged by Hurricane Maria ${ }^{190}$ and in May 2018, the Commission approved additional funding to accelerate the restoration of communications networks in Puerto Rico and the U.S. Virgin Islands that were damaged and destroyed during the 2017 hurricane season. ${ }^{191}$ It also sought comment on providing almost $\$ 900$ million in medium- and long-term funding for the purpose of expanding and improving broadband access on the islands. ${ }^{192}$ The Order and Notice of Proposed Rulemaking includes an immediate infusion of approximately $\$ 64$ million in additional funding for short-term restoration efforts, and sought public comment on a proposal to allocate approximately $\$ 444.5$ million in funding for Puerto Rico and $\$ 186.5$ million for the U.S. Virgin Islands over the next decade for the expansion of fixed broadband connectivity. ${ }^{193}$

## C. Access to Spectrum

67. Since the release of the 2018 Report, the Commission has continued its efforts to expand access to spectrum to support or supplement wireless and satellite broadband services. On August 3, 2018, the Commission announced the application and bidding procedures for the Spectrum Frontiers auctions of licenses in the 24 GHz and 28 GHz bands to speed the deployment of 5 G services in these bands. ${ }^{194}$ The two auctions have separate application and bidding processes and concurrent application windows, and the first round of bidding commenced November 14, 2018. ${ }^{195}$ On September 26, 2018, the Commission streamlined, consolidated, and harmonized the rules governing earth stations used to provide satellite-based FSS services on ships, airplanes and vehicles. ${ }^{196}$ These actions simplify the regulatory approval process for this rapidly growing segment of the satellite communications market and expand the FSS frequency bands where these operations can be conducted. ${ }^{197}$ On November 15, 2018, the Commission adopted a Notice of Proposed Rulemaking proposing to further streamline the Commission's Part 25 rules governing satellite services, including through consolidated licensing and reporting proposals. ${ }^{198}$
68. In addition, the Commission has initiated several proceedings aimed at facilitating the efficient and effective use of spectrum, such as the 2.5 GHz rulemaking proceeding, or increasing the amount of spectrum that may be used to enhance bandwidth and capacity, such as the Spectrum Frontiers

[^16]proceeding. ${ }^{199}$ In another proceeding, the Commission is pursuing the joint goals of making more midband spectrum available between $3.7-4.2 \mathrm{GHz}$ for new terrestrial wireless uses while balancing desired speed to the market, efficiency of use, and effectively accommodating incumbent Fixed Satellite Service (FSS) and Fixed Service (FS) operations in the band. ${ }^{200}$
69. With respect to satellite, the Commission approved the first U.S.-licensed satellite constellation to provide broadband services using a new generation of low-Earth orbit (LEO) satellite technologies in the SpaceX Authorization Order. ${ }^{201}$ The Commission also granted O3b Limited's request to expand its grant of U.S. market access for its NGSO constellation in order to allow O3b to pursue its goal of expanding broadband Internet access to communities across the United States. ${ }^{202}$ These actions promise to expand broadband to communities across the United States.
70. On November 15, 2018, the Commission adopted a number of Orders granting the applications of non-geostationary (NGSO) FSS LEO systems for authorization or market access to provide broadband services in the United States. Specifically, the Commission (1) granted Telesat Canada's request to access the U.S. market to provide broadband services using a proposed constellation of 117 NGSO LEO satellites, ${ }^{203}$ and (2) granted LeoSat's request for U.S. market access to provide satellite broadband services in the United States using a proposed constellation of 78 NGSO LEO satellites, including high-speed connectivity for enterprises. ${ }^{204}$ The Commission also granted SpaceX's application to construct, deploy and operate a proposed NGSO satellite system using frequencies in the Vband, which will provide SpaceX with additional flexibility to provide both diverse geographic coverage and the capacity to support a wide range of proposed broadband and communications services in the United States and globally. 205
71. By assessing our ongoing efforts toward closing the digital divide, as we do in this Report, we gain valuable insight from stakeholders and other interested parties as to whether our policies

[^17]and actions are effective and what more we could consider doing as we continue our work to ensure that all Americans have access to advanced telecommunications capability. We agree with R Street that the work of the Commission's new Office of Economics and Analytics should further enhance the precision of our section 706 analysis and bolster our data-driven policies going forward. ${ }^{206}$

## D. Broadband Deployment Advisory Committee

72. The BDAC, a federal advisory committee chartered in March 2017, makes recommendations to the Commission on how to accelerate broadband deployment by reducing and/or removing regulatory barriers to infrastructure investment. ${ }^{207}$ The BDAC provides a means for stakeholders to exchange ideas and develop recommendations to the Commission on broadband deployment, thereby enhancing the Commission's ability to carry out its statutory responsibility to encourage broadband deployment to all Americans. ${ }^{208}$ Since the Commission released the 2018 Report, the BDAC has met three times, first on April 25, 2018 ${ }^{209}$ then on July 26-27, 2018, ${ }^{210}$ and again on December 6-7, 2018. ${ }^{211}$
73. In 2018, the BDAC considered reports and recommendations from its various working groups, including draft model codes for states and municipalities to encourage the development and deployment of broadband infrastructure. ${ }^{212}$ The BDAC adopted the model code for municipalities at the July 2018 meeting and finalized the model code for states at the December 2018 meeting.
74. In August, the BDAC solicited nominations for membership on a new Disaster Response and Recovery Working Group, and on November 1, 2018, Chairman Pai appointed the members who will serve on the Disaster Response and Recovery Working Group of the BDAC. ${ }^{213}$ The BDAC's Disaster Response and Recovery Working Group will be charged with making recommendations on additional measures that can be taken before a disaster to improve resiliency of broadband infrastructure, strategies that can be used during the response to a disaster to minimize the downtime of broadband networks, and

actions that can be taken to restore broadband infrastructure during disaster recovery. ${ }^{214}$ On December 10, the Commission announced its intent to re-charter the BDAC for an additional two years, starting on or about March 1, 2019, and solicited nominations for the re-chartered BDAC. ${ }^{215}$
75. The BDAC's efforts have been particularly influential in the Commission's infrastructure proceedings. A number of the BDAC's recommendations ${ }^{216}$ provided the framework for many of the Commission's actions in the August 2018 Wireline Infrastructure Third Report and Order and Declaratory Ruling, ${ }^{217}$ including the BDAC's January 2018 proposal to streamline pole attachment makeready workflows under a "one-touch make-ready" (OTMR) model. ${ }^{218}$ Similarly, the BDAC's findings, reports, and recommendations ${ }^{219}$ informed the conclusions in the Commission's September 2018 Wireless Infrastructure Declaratory Ruling and Third Report and Order. ${ }^{220}$

## VI. SECTION 706 FINDING

76. We conclude that advanced telecommunications capability is being deployed to all Americans in a reasonable and timely fashion. As discussed in detail above, ${ }^{221}$ the Commission has taken significant steps since the last Report to "encourage the deployment on a reasonable and timely basis of advanced telecommunications capability to all Americans." ${ }^{222}$ Public reports of industry efforts and plans for broadband expansion support our belief that the Commission's actions to date to encourage and stimulate broadband deployment and innovation are in fact working as intended. Capital expenditures by broadband providers increased by approximately $\$ 1.5$ billion in 2017 , reversing declines that occurred in both 2015 and 2016. ${ }^{223}$ Broadband providers, both small and large, built and upgraded networks across the country, deploying fiber to 5.9 million additional homes in 2018 , the most ever recorded in a single year. ${ }^{224}$ AT\&T, Sprint, and Verizon have each announced planned launches of 5G networks in multiple cities to begin in late 2018 and continue through 2019.225 In addition, several states have announced state
(Continued from previous page)

${ }^{215}$ See FCC Announces the Re-Charter of the Broadband Deployment Advisory Committee and Solicits Nominations for Membership, GN Docket No. 17-83, Public Notice, DA 18-1239 (Dec. 10, 2018).
${ }^{216}$ See, e.g., BDAC January 2018 Recommendations at 19-22, 26-27, 29, 37, 39, https://ecfsapi.fcc.gov/file/107030255502405/Competitive\ Access\ to\ Broadband\ Infrastructure\ R eport.pdf ; BDAC, Addendum to the Report of the Competitive Access to Broadband Infrastructure Working Group (April 25, 2018), https://www.fcc.gov/sites/default/files/bdac-cabi-report-04252018.pdf.
${ }^{217}$ See Wireline Infrastructure Third Report and Order, 33 FCC Rcd at 7706, para. 2.
and local programs and public-private partnerships that are expected to further stimulate broadband deployment and access. ${ }^{226}$
77. Because the data used in our analysis here only provide the extent of U.S. broadband deployment through December 2017, some of the actions that the Commission has more recently undertaken to speed broadband deployment likely are not yet fully reflected by that data. We agree with Free State, however, that the "data available thus far for 2017 supports an affirmative determination that broadband is being reasonably and timely deployed" and that the 2017 Form 477 data "shows further progress in broadband deployment that exceeds 2016 and 2015 . .. ${ }^{י 227}$ The available data demonstrate progress in the deployment of "advanced telecommunications capability" from 2016 to 2017. The percentage of Americans with access to fixed terrestrial broadband deployment increased from $91.9 \%$ in 2016 to $93.5 \%$ in 2017, for example, with increases in urban, rural, and tribal areas. ${ }^{228}$ More Americans- $89 \%$-have access to mobile LTE with median speeds of $10 \mathrm{Mbps} / 3 \mathrm{Mbps}$, up from $87.3 \%$ in 2016. ${ }^{229}$ Indeed, there were deployment increases in both fixed and mobile services, both apart and when combined. ${ }^{230}$ We also are encouraged by the year over year increases in fixed terrestrial services at every speed examined in this report- $10 \mathrm{Mbps} / 1 \mathrm{Mbps}, 25 \mathrm{Mbps} / 3 \mathrm{Mbps}, 50 \mathrm{Mbps} / 5 \mathrm{Mbps}, 100$ $\mathrm{Mbps} / 10 \mathrm{Mbps}$, and $250 \mathrm{Mbps} / 25 \mathrm{Mbps} .{ }^{231} \mathrm{In}$ addition, we believe that the planned 5 G deployments and launches, as well as the state and local and private-public partnership efforts noted above, ${ }^{232}$ are signs that the industry is responding favorably to our efforts to spur broadband deployment and expansion with increased investment.
78. We disagree with commenters who contend that the section 706 requirements have not been met. ${ }^{233}$ Specifically, the Commission's spectrum policy and its actions in the infrastructure dockets have complemented, not undermined, its efforts to promote broadband deployment. ${ }^{234}$ Moreover, as the Commission has previously explained, the statute requires that we determine whether advanced telecommunications capability "is being deployed to all Americans"-not whether it has already been deployed to all Americans. ${ }^{235}$ The statute does not require perfection; reading section 706 (b) to require
(Continued from previous page)
${ }^{218}$ See BDAC January 2018 Recommendations at 18-31, https://ecfsapi.fcc.gov/file/107030255502405/Competitive\ Access\ to\ Broadband\ Infrastructure\ R eport.pdf. By some estimates, OTMR alone could result in approximately 8.3 million incremental premises passed with fiber, and about $\$ 12.6$ billion in incremental fiber capital expenditures. See Letter from Thomas J. Navin, Counsel to Corning, to Marlene H. Dortch, Secretary, FCC, WT Docket No. 17-84, at Attach. A; Ed Naef and Alex King, CMA Strategy Consulting, Assessing the Impact of Removing Regulatory Barriers on Next Generation Wireless and Wireline Broadband Infrastructure Investment: Annex 1, Model Sensitivities at 5-6 (filed Feb. 26, 2018).

${ }^{224}$ See Fiber Broadband Association, North American 2018 Advanced Broadband Report (2018).
universal availability as a prerequisite for a positive finding would disregard the statute's "reasonable and timely" language. ${ }^{236}$ Our policymaking efforts over the last two years are promoting broadband deployment, ${ }^{237}$ and the data show that ISPs are making strong progress in deploying advanced telecommunications capability to more and more Americans. ${ }^{238}$ These circumstances warrant a positive finding.
79. We recognize that despite our positive finding today, our work to close the digital divide is not complete. For instance, the data demonstrates that six percent of Americans, over 19 million households, lack access to fixed terrestrial advanced telecommunications capability and we recognize that the situation is especially problematic in rural areas, where over $24 \%$ lack access, and Tribal Lands, where $32 \%$ lack access. ${ }^{239}$ Several Commission proceedings remain open as we actively work to close the digital divide. In addition, as detailed in the December 2018 Communications Marketplace Report, over the next two years, we plan on taking a number of additional actions to promote further broadband deployment. ${ }^{240}$ The further deployment of advanced telecommunications capability will remain a top

[^18](Continued from previous page)
Houston, Kansas City, Los Angeles, New York, Phoenix, and Washington, with nationwide roll-out expected in the first half of 2019, and delivering LTE and 5G simultaneously on the same spectrum band).

${ }^{227}$ FSF Comments at 2, 4-6.
${ }^{228}$ See supra Fig. 1.
${ }^{229}$ See supra Fig. 2b.
${ }^{230}$ See supra Figs. 1, 2a, 2b, 3c, 3d.
${ }^{231}$ See supra Fig. 4.
${ }^{232}$ See para. 77, supra; see also ACA Comments at 5 ("[T]he Commission's pursuit of a regulatory agenda that minimizes the costs and burdens of deployment is a major factor that has driven and continues to drive ACA members' substantial broadband investments."); ACA Reply at 2-3 ("Indeed, the investments of the cable industry . . . are expected to bestow 'at least 70 to $75 \%$ of American households [with] access to cable gigabit services by the end of 2018."').
${ }^{233}$ See, e.g., CWA Comments at 2 (Broadband is not being deployed in a reasonable and timely fashion, and the Commission was wrong to conclude so . . ."); PK \& CC Comments at 3, 19-23 ("[T]he Commission’s actions on a number of broadband related issues from copper retirement, to Lifeline, to spectrum have all widened the digital divide or unnecessarily slowed broadband deployment"; elimination of copper retirement rules puts vulnerable Americans at risk for service downgrades, spectrum policies have delayed CBRS deployment and created potential for spectrum warehousing, and proposed cuts to Lifeline will widen the digital divide); National Associations Reply at 3 ("By focusing on progress rather than those left unserved, the Commission seems to have lowered the bar for assessing broadband deployment at a time when we should be reaching for a higher standard. This progress based standard effectively tells those still waiting for broadband that it is reasonable for them to have been left behind."); CC, PK \& NHMC Nov. 15, 2018 Ex Parte Letter at 5.
${ }^{234}$ For example, in the Wireline Infrastructure First Report and Order, the Commission largely returned its copper retirement rules to their pre-2015 state based on a record in that proceeding demonstrating that the copper retirement rules adopted in 2015 were overly burdensome and unnecessary, and caused certain incumbent LECs to delay plans to deploy fiber "and, in some instances, to even consider foregoing fiber deployment altogether." Wireline Infrastructure First Report and Order, 32 FCC Rcd at 11141, para. 31. The currently effective copper retirement rules afford incumbent LECs transitioning to next-generation networks greater flexibility, "eliminating the delays and additional costs imposed by" the rules adopted in 2015. Id. at 11145, para. 41. In addition, recent Commission actions have made additional spectrum available in the 600 MHz band, the 3.5 GHz band, and the millimeter wave bands. See Incentive Auction Closing and Channel Reassignment Public Notice; The Broadcast Television Incentive Auction Closes; Reverse Auction and Forward Auction Results Announced; Final Television Band Channel Assignments Announced; Post-Auction Deadlines Announced, Public Notice, 32 FCC Rcd 2786 (MB, WTB 2017); Use of Spectrum Bands Above 24 GHz For Mobile Radio Services, Third Report and Order, Memorandum Opinion and Order, and Third Further Notice of Proposed Rulemaking, FCC 18-73 (Jun. 8, 2018). The Commission is also attempting to make additional spectrum available in other bands, including making more mid-band spectrum available between 3.7-4.2 GHz for new terrestrial wireless uses while balancing desired speed to the market, efficiency of use, and effectively accommodating incumbent FSS and FS operations in the band. See 3.7 to 4.2 GHz Band Order and NPRM at paras. 1-2. The Commission has proposed rules that will allow more efficient and
priority as we continue our efforts to help deliver the benefits of broadband to all Americans.

## VII. ORDERING CLAUSE

80. Accordingly, IT IS ORDERED that, pursuant to section 706 of the Telecommunications Act of 1996, as amended, 47 U.S.C. § 1302, this Report IS ADOPTED.

# FEDERAL COMMUNICATIONS COMMISSION 

Marlene H. Dortch<br>Secretary

## STATEMENT OF COMMISSIONER MICHAEL O'RIELLY

## Re: Inquiry Concerning Deployment of Advanced Telecommunications Capability to All Americans in a Reasonable and Timely Fashion, GN Docket No. 18-238, 2019 Broadband Deployment Report.

This report fulfills our task mandated by Congress and I am pleased to support it. To be clear: according to our data collection, which has been rightfully criticized, approximately nine million Americans still lack access to even $10 / 1 \mathrm{Mbps}$ service, and our finding here does not deny that point. However, our statutory mandate is not only to determine whether all Americans currently have access to advanced telecommunications capabilities, but also whether progress in deploying such services is proceeding at a reasonable and timely pace, and an affirmative response to the latter inquiry is completely consistent with the facts on the ground. I remain steadfast in my commitment to bringing access to those Americans currently without any broadband option at all and look forward to further actions by this Commission on this front, including, above all, the implementation of the Remote Areas Fund (RAF) auction in some form or fashion. At the same time, there is no doubt that rapid and robust progress in deployment, particularly in the wireless space, is evident according to the albeit imperfect data we have.

Notwithstanding my overall support, I remain dismayed by the report's reliance on purported "insufficient evidence" as a basis for maintaining-for yet another year in a row-an outdated siloed approach to evaluating fixed and mobile broadband, rather than examining both markets as one. Data shows that fixed and mobile service are undoubtedly substitutable for many Americans and that fixed and mobile providers are in fierce competition with one another for customers. According to a 2018 Pew Research study cited in this very record, one in five American adults have opted to subscribe exclusively to mobile service-a 7-point increase since $2015 .{ }^{1}$ Beyond the existence of cross-platform competition, fixed providers are increasingly entering the wireless market, and integrating their wired and wireless technologies with each other. Given this new horizon of technological convergence, a siloed approach to fixed and mobile service makes even less sense.

Moreover, the report focuses shortsightedly on the limitations of mobile service, whereas, one could just as easily point to the limitations of fixed service in meeting the functionalities that customers value. For example, why do we focus on the shortcomings of mobile service with respect to bandwidth capacity-which is especially absurd given consumers' increasing reliance on mobile services for bandwidth-intensive applications like video-streaming-but ignore the shortcomings of fixed service with respect to flexibility and mobility? Whether mobile and fixed serve interchangeable functions for every American for every potential use is immaterial for purposes of this report, and we should be evaluating both services from a technology neutral standpoint.

Therefore, while I vote to approve, I express hope that by next year's report, the Commission will have the requisite data to finally recognize marketplace and technological reality with respect to mobile broadband and evaluate the state of deployment in a more comprehensive manner.

[^21]
# STATEMENT OF <br> COMMISSIONER BRENDAN CARR 

## Re: Inquiry Concerning Deployment of Advanced Telecommunications Capability to All Americans in a Reasonable and Timely Fashion, GN Docket No. 18-238, 2019 Broadband Deployment Report

This year's Section 706 report contains more good news for American leadership in 5G. The FCC's policies are working.

Internet speeds in the U.S. have never been faster: they're up nearly $40 \%$. The digital dividethe percentage of Americans without access to high-speed Internet access-narrowed by nearly $20 \%$. Providers built fiber broadband out to more homes last year than ever before. The U.S. now has the largest commercial deployment of 5 G in the world, and we're predicted to have more than two times the percentage of 5 G connections as Asia. That is more broadband for more Americans.

But more than the numbers, the FCC's approach is benefiting everyday Americans in communities around the country. In Blue River Township, Indiana, I sat at a kitchen table with Linda Muegge. Her family runs a small farm in a community of 1,500 people. She talked about the difference a new broadband connection is making in her life and the lives of her children. Her son, Chris, went to graduate school at Purdue and earned an advanced degree in cattle nutrition. Rather than moving to a big city after graduating, Chris moved back home and launched a successful online consulting business, mostly for cattle owners, with clients as far away as Costa Rica. Chris uses the new broadband connection to see the cattle in HD and download large data sets to monitor their feeding and health. Without the high-speed connection, Chris would not be able to live in Blue River. Now, he can pitch in at the farm while continuing to pursue his own high-tech business. ${ }^{1}$

In Sioux City, Iowa, I visited a plant that manufactures the poles and towers needed for new wireless deployments. Five hundred people now work there welding, galvanizing, and pressing the steel needed for broadband infrastructure. Tyler talked about the increased demand they're now seeing at the facility for small cell poles, which are the building blocks of $5 \mathrm{G} .{ }^{2}$

In Lewisville, Texas, an infrastructure company just opened a new 26,000 square foot facility. They are using it to train and hire the tower crews that are now building out broadband networks across the country. Devin, a former combat engineer, showed me the ropes and just some of the skills that his crews are learning. ${ }^{3}$ Rick, who's been training tower hands and telecom crews for nearly two decades told me that his teams have never been busier. In fact, they are looking to hire more than 500 workers for good-paying, 5 G jobs at this one facility. And more broadly, the tower industry is looking to add 20,000 workers as the construction of new 5 G networks accelerates.

The FCC is working to encourage even more broadband infrastructure deployment. We updated federal rules regarding the placement of small cells and other wireless facilities. We built on common sense siting reforms adopted in states and cities across the country. And we freed up more spectrum than any other country in the world.

None of this is to say that our job at the FCC is done. As the Report makes clear, far too many Americans remain unable to access high-speed broadband, and we have much more work left to do. But the question Congress set out in Section 706 is "whether advanced telecommunications capability is being

[^22]deployed to all Americans in a reasonable and timely fashion." The data show that it is. I look forward to building on this good momentum and ensuring that even more Americans can benefit from the economic opportunity that broadband enables.

# STATEMENT OF COMMISSIONER JESSICA ROSENWORCEL, DISSENTING 

## Re: Inquiry Concerning Deployment of Advanced Telecommunications Capability to All Americans in a Reasonable and Timely Fashion, GN Docket No. 18-238, 2019 Broadband Deployment Report.

It is simply not credible for the Federal Communications Commission to clap its hands and pronounce our broadband job done-and yet that is exactly what it does in this report today. By determining that under the law broadband deployment is reasonable and timely for all Americans, we not only fall short of our statutory responsibility, we show a cruel disregard for those who the digital age has left behind.

Broadband is more than a technology-it's a platform for opportunity. No matter who you are or where you live in this country, you need access to advanced communications to have a fair shot at 21 st century success. That is why our responsibility to offer an honest assessment with this report is so disappointing.

This report deserves a failing grade. It concludes that broadband deployment is reasonable and timely throughout the United States. This will come as news to millions and millions of Americans who lack access to high-speed service at home. It will come as news to communities across the country that are struggling to secure the broadband they need for economic revitalization and growth. It will come as news to rural households and tribal areas that fear without change they will forever be consigned to the wrong side of the digital divide. It will come as news to urban areas where redlining has led to broadband deserts. It also will come as news to millions of students who fall into the homework gap because they lack the internet access needed for nightly schoolwork.

Moreover, it will come as news to governors, mayors, and legislators across the country working overtime to extend high-speed service to those outside its reach. It will come as news to members of Congress who in hearing after hearing have chided this agency for its inability to deliver the promise of broadband to communities they represent. Is it infrastructure week yet? Because there is no conversation in Washington regarding infrastructure that does not give prominent place to the work we have yet to do to reach everyone, everywhere with high-speed service.

Instead of this report, we should be issuing a candid appraisal of the work we have to do to bring broadband everywhere. This requires three things.

First, we need to stop relying on data we know is wrong. Putting aside the embarrassing fumble of the FCC blindly accepting incorrect data for the original version of this report, there are serious problems with its basic methodology. Time and again this agency has acknowledged the grave limitations of the data we collect to assess broadband deployment. If a service provider claims that they serve a single customer in a census block, our existing data practices assume that there is service throughout the census block. This is not right. It means the claim in this report that there are only 21 million people in the United States without broadband is fundamentally flawed. Consider that another recent analysis concluded that as many as 162 million people across the country do not use internet service at broadband speeds. Adding insult to injury, the same flawed data we rely on here is used to populate FCC broadband maps. For those keeping track, one cabinet official has described those maps as "fake news" and one Senator has suggested they be shredded and thrown into a lake.

Second, we need high standards. The future belongs to the bold. History demonstrates that when we set audacious goals we can do big things. It is time to commit to broadband goals that reflect not just where we are but where we are going. It has been four years since the FCC updated its broadband standard from 4 Megabits to 25 Megabits per second. Technology changes fast. In fact, three years ago,
this country's largest broadband provider began rolling out Gigabit service to just shy of 60 million homes and businesses. This agency needs to keep up. It's time for the FCC to adopt a 100 Megabits per second standard and set Gigabit speeds in our sight.

Third, we need to be honest about the state of what we have found. We will never manage problems we do not measure. Our ability to address the challenge of uneven internet access across the country is only made more challenging by our inability to be frank about the state of deployment today. Moreover, we need to be thoughtful about how impediments to adoption, like affordability, are an important part of the digital equity equation and our national broadband challenge.

In other words, there is an honorable way forward. But in this report the FCC fails its statutory duty. It fails to use the accurate data we need. It fails to set ambitious standards. Worse, it fails the American public by proclaiming mission accomplished when our lived experience tells us that too may people in this country in too many communities are being left behind. The rest of the world is not grading their progress with infrastructure on a curve. We shouldn't either.

I dissent.

# STATEMENT OF COMMISSIONER GEOFFREY STARKS, DISSENTING 

## Re: Inquiry Concerning Deployment of Advanced Telecommunications Capability to All Americans in a Reasonable and Timely Fashion, GN Docket No. 18-238, 2019 Broadband Deployment Report.

The 2019 Broadband Deployment Report reaches the wrong conclusion. According to the report, the digital divide has narrowed substantially over the past two years and broadband is being deployed on a reasonable and timely basis. The rosy picture the report paints about the status of broadband deployment is fundamentally at odds with reality. While I would like to be able to celebrate along with the FCC's majority, our broadband deployment mission is not yet accomplished. If you are 10 steps away from your goal and you move a step-and-a -half forward, you don't have a victory party when your work isn't done. You give yourself a pat on the back and put your head down to achieve the remaining eight-and-a-half steps. And that's where we are - with over 21 million Americans without access to quality, affordable broadband, we are about eight-and-a-half steps behind and we must get back to work. The report masks the urgent need for continued and renewed action to address inequities in internet access in rural, tribal, and urban areas of the country.

The fundamental disconnect between the report and reality is reason enough for my dissent. But I am also compelled to speak out about the process that led to this report, which, when initially circulated, was based on massive, erroneous overstatements of high-speed internet deployment in the underlying data. The errors in the circulated report involved a broadband provider called Barrier Free that, in its first broadband service report to the FCC, reported that as of December 2017 it provided high-speed broadband service in an area where 62 million people live. If Barrier Free's reporting was correct (it was not - Barrier Free acknowledged the errors in its revised filing in March 2019) it would have gone from providing no service as of March 2017 to being the $4^{\text {th }}$ largest ISP in the country as of December 2017. The fact that such a huge error was not flagged but instead was baked into the FCC's data underlying this report - the same data underlying much of the FCC's frequently criticized broadband mapping efforts demonstrates the fundamental problems with the FCC's data analysis capabilities.

Let's briefly focus on the timeline at issue. Barrier Free's filing (which the Commission now admits contained erroneous data) was included in data due at the end of March 2018. In February 2019, the Chairman circulated a non-public draft broadband deployment report to the other Commissioners for their consideration. On the same day, the FCC issued a press release describing the draft report and stating that "the number of Americans lacking access to a fixed broadband connection meeting the FCC's benchmark speed of $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ has dropped over $25 \%$, from 26.1 million Americans at the end of 2016 to 19.4 million at the end of $2017 .{ }^{" 1}$ At this point in time, the FCC had been in possession of Barrier Free's erroneous data for nearly eleven months! On March 5, 2019, Free Press, a non-profit public interest entity, filed a letter with the Commission identifying Barrier Free's erroneous reporting and detailing how it impacted the broadband deployment claims made in the FCC's February Press Release. ${ }^{2}$

[^23](continued....)

The FCC did not issue another press release acknowledging the errors Free Press found and correcting statements about declines in the digital divide from its February press release. And, even after Barrier Free admitted that the data it reported to the FCC was wrong, the FCC neither removed the draft Broadband Deployment Report from circulation nor committed to revising it. Instead, nearly two months passed before the Chairman circulated a corrected version of the report. Surprisingly, the conclusion in the report didn't change. In fact, very little in the report changed. It's incredible to me that an error this large - approximately 62 million in overstated broadband connections - didn't materially change the report.

The fact that a 2019 Broadband Deployment Report with an error of over 62 million connections was circulated to the full Commission raises serious questions. Was the Chairman's office aware of the errors when it circulated the draft report? If not, why didn't an "outlier" detection function raise alarms with regard to Barrier Free? Also, once the report was corrected, the fact that such a large number of connections came out of the report's underlying data without changing the report's conclusion, and without resulting in a substantial charge to the report, calls into question the extent to which the report and its conclusions depend on and flow from data. These issues go to the core nature of the Deployment Report, and more broadly, our FCC mission - to determine where broadband service is and is not deployed, and to be grounded in and led by the actual facts and data.

## The Commission's Data Processing

The facts surrounding Barrier Free's erroneous filing and the 2019 Broadband Deployment Report raise serious questions about the way the FCC evaluates data. Here's why the inability to spot this mistake is particularly troubling: the errors in the Barrier Free data are anomalous on multiple fronts. First, Barrier Free's growth rate, growing from no service to service in areas where 62 million people live is implausible. That anomaly alone should have resulted in Barrier Free's report being flagged for review. Second, Barrier Free claimed that it served $100 \%$ of the census blocks in every state in which it operated. Claims of $100 \%$ of nearly anything should flag a filing as an outlier. Third, the speeds Barrier Free reported providing, 940 Mbps upstream/ 880 Mbps downstream, don't track with the wireless technology reportedly used by the company. This mismatch should have further identified the company's data as an outlier requiring further review. And fourth, the combination of coverage and speeds claimed by Barrier Free - for example, covering the entire state of New York with fiber-to-the-home service should have stuck out as an outlier on a "gut-check" level. Nobody familiar with broadband deployment in the U.S. would believe that the entire state of New York suddenly has fiber-to-the-home speed service available.

In the future, Commission staff must conduct data checks that would flag each of the issues listed above, ideally at the filing stage so that FCC analysts would never have had to grapple with Barrier Free's erroneous filing. And the FCC shouldn't stop at building in or perfecting checks. It should consider deploying machine learning models that can identify outliers and other patterns within the data that are likely to be anomalous. Such models could significantly reduce the manual data cleansing efforts currently built into the FCC's work with each data filing.
(Continued from previous page)
points out that Barrier Free submitted, as its coverage area for 940 Mbps download / 880 Mbps upload service, a list of "every single census block in each of the eight states where it claimed service: CT, DC, MD, NJ, NY, PA, RI, and VA", an area containing nearly 62 million people. That claim, if true, would make Barrier Free the $4^{\text {th }}$ largest internet service provider in the U.S. The letter notes that this speed combination is unique to Verizon's Fiber-to-theHome service, that Verizon is the only other filer to claim offering service at that speed, and that Barrier Free, according to its Website, does not market Fiber-to-the-Home at any speed. The Free Press letter then describes the role Barrier Free's over reporting played in the claims the FCC made in its press release announcing the 2019 Broadband Progress Report. Most notably, the Barrier Free over reporting accounted for 2 million of the approximately 6.4 million new homes served by fixed $25 / 3$ broadband during 2017.

## Issues With Data the Commission Collects to Inform Its Broadband Policy Decision-Making

Unfortunately, the Commission's problems with data simply don't end with the Barrier Free incident. One thing that members of Congress and nearly every industry stakeholder agree on is that the FCC's broadband mapping, and the data behind it, including the data used by the Commission to create its annual broadband deployment report, has serious flaws. ${ }^{3}$ We hear about these flaws frequently at a high level - but they are worth exploring in more detail. Three of the most frequently identified flaws are rooted in FCC interpretations of how to gather and use data. They are within our power to fix, and we must do so.

First, critics frequently attack the FCC's mapping for treating an entire census block as served if a service provider reports providing service at any location within the block. This methodology produces maps that overstate service deployment because it lumps together served and unserved locations in each census block. In fact, the FCC doesn't even provide a way for providers of fixed broadband service to report their service locations on a more granular basis. Here is what the instructions for the FCC's Form 477 direct fixed broadband service providers to report:

Report a list $\ldots$ of all census blocks in which the filer (including affiliates) makes broadband connections available to end-user premises, along with the associated information on technology of transmission ..., [and] maximum upload and download speeds ... ${ }^{4}$

This direction does not require service providers to identify addresses within a census block where they provide service. Instead, providers must list census blocks where they make broadband connections available. To complicate matters, census blocks used in the 2010 census varied greatly in size. Generally, census blocks are small in area, for example, a city block bounded on all sides by streets. But census blocks in suburban and rural areas may be large and in remote areas may encompass hundreds of square miles. ${ }^{5}$ Large census blocks, combined with the FCC practice of considering an entire census block served if any single location within it is served, are the primary reasons why the FCC's maps based on its 477 data overstate the availability of broadband.

Another problem with the FCC's Form 477 data collection is that fixed broadband service providers may report areas as served if they "could" serve them, even if they do not actually provide service. Specifically, the Form 477 instruction for fixed broadband providers requires them to report, by census block, areas where they make service "available." The form defines "available" as follows:

For purposes of this form, fixed broadband connections are available in a census block if the provider does, or could, within a service interval that is typical for that type of connection-that is, without an extraordinary commitment of resources - provision twoway data transmission to and from the Internet with advertised speeds exceeding 200 kbps in at least one direction to end-user premises in the census block. ${ }^{6}$

[^24]This instruction allows service providers to report, as served, census blocks that they could deploy service to, resulting in data that contains an indistinguishable jumble of census blocks where service is actually and hypothetically available. Obviously, this mixture directly impacts the reliability of any map purporting to show where broadband service is actually available.

A third problem with the FCC's Form 477 data—and with the maps based upon it—is rooted in mobile broadband service reporting. Service providers aren't required to report the speeds they are actually providing. Instead, they report "minimum advertised upload and download data speeds." Here are the Form 477 instructions that tell mobile broadband service providers what they must report:
> $[\mathrm{P}]$ roviders shall submit polygons in a shapefile format representing geographic coverage nationwide ... for each mobile broadband transmission technology ... deployed in each frequency band ... The data associated with each polygon should indicate the minimum advertised upload and download data speeds associated with that network technology in that frequency band ..., and the coverage area polygon should depict the boundaries where, according to providers, users should expect to receive those advertised speeds. ${ }^{7}$

Requiring service providers to report minimum advertised speeds results in data and maps that may not show actual speeds customers are likely to experience. This information falls short of what the FCC needs to guide our policy efforts to close the digital divide.

These problems are all symptomatic of a much larger issue with the FCC's data collection: the FCC's Form 477 does not collect the right data. Take for example one of the primary uses of the Form 477 data collection - measuring the effectiveness of the FCC's Universal Service programs in closing the digital divide. The right data would allow the FCC to measure the progress of the Universal Service program, to evaluate the effectiveness of programs and related strategies, to identify barriers to progress in the program, and to understand where it should target resources. But that's not what the data the FCC collects does. Because the data reports entire census blocks as served if just one location is served, the FCC cannot answer relevant program evaluation questions like how many Americans have broadband in their homes, businesses, and community anchor institutions. Similarly, it does not give the FCC tools needed to measure progress in closing the digital divide. And, it does not identify with sufficient granularity areas where the FCC should direct its Universal Service Fund resources. Luckily, the FCC doesn't need additional authority to fix these problems - it can do so within its rulemaking authority.

The FCC should change its data collection policies, so service provider reporting is granular and accurate. The FCC should also ensure that its Form 477 data set complies with the Open Government Data Act which requires it to publish much of its non-confidential data in machine-readable format. The FCC should lead the way in making data open. Doing so will encourage academics, researchers, and other stakeholders to use this data in innovative ways.

Industry has advanced numerous proposals to improve the FCC's data collections and mapping and the FCC has an open rulemaking proceeding to consider changes to how it collects data. I'll consider the work produced within the rulemaking when it comes to me and to my colleagues. I'm hopeful that this work will enable to Commission to map, at an address level, where broadband is available in the U.S. That's the level of granularity we need in order to understand where broadband is and is not available.

That brings me back to the purpose of my dissenting vote: to strongly voice my position that the FCC's 2019 Broadband Data Report reached the wrong conclusion. As of now, I don't believe that we know what the state of broadband deployment is in the U.S. with sufficient accuracy. I'm aware that last

[^25]year's Broadband Progress Report engaged in legal gymnastics to change the standard the Commission uses to comply with its annual obligation to report to Congress on the state of broadband deployment in the U.S. I disagree with the majority's position that the statute requires the Commission to report on year-over-year provider deployment comparisons. Reading the test in this manner guarantees that the standard will be met if carriers report progress in meeting their deployment plans. More importantly, the test focuses on provider plans and how providers are meeting them, rather than whether any progress has been made bringing broadband to people who don't have it and who live outside of areas where service providers have, on their own, decided to deploy broadband. By reframing the test in this manner, the majority avoids the hardest question present in this debate - how to get broadband deployed to expensive and difficult to serve areas.

Regardless of the reporting standard here, the Commission's mission is to close the digital divide. And we must have accurate data about the problem we are trying to solve and the progress we are making toward solving it in order to make effective, data-driven decisions.

For all of these reasons I dissent.
Notwithstanding my dissent, I recognize the work of the staff of OEA, WCB, and WTB that went into creating this report and I appreciate their efforts.

[^4]:    ${ }^{125}$ We present deployment estimates for all fixed services including satellite broadband in an appendix. See infra Appendix 9 (Deployment (Millions) of Fixed Services at Different Speed Tiers (2014-2017)).

[^5]:    ${ }^{126}$ We present additional deployment data on the territories in the Appendix. See infra Appendix 4 (Deployment of Fixed Terrestrial $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ Services and Mobile LTE $5 \mathrm{Mbps} / 1 \mathrm{Mbps}$ by U.S. Territory).
    ${ }^{127}$ For instance, the data in 2015 appears to show a significant drop in deployment for fixed and mobile services that is not continued in 2016.

[^6]:    ${ }^{128}$ To compare the demographic data between areas where these services are and are not deployed, we aggregate the census block data up to the census block group level, the lowest aggregation level for which demographic information is available. This aggregation can result in census blocks being grouped together that may not be uniformly deployed or be uniformly categorized as urban, rural, or on Tribal lands. We designate a census block group as without deployment if more than $5 \%$ of the population in the census block group is without services; we designate a census block group as rural if more than $50 \%$ of the population in the census block group resides in census blocks designated as rural, and we designate a census block group as Tribal lands if more than $50 \%$ of the land area in the census block group is designated as Tribal lands. Population Density is the total population residing in the census block group divided by the square miles of land in the census block group. The estimate of land area is based upon the 2010 Census. We use the ACS Five-Year Estimates 2013-2017 for income and poverty measures. Per capita income and median household income in the past twelve months are measured in 2017 Inflation-Adjusted Dollars. The poverty rate is the proportion of households living below the poverty level.

[^7]:    ${ }^{130} \mathrm{As}$ is the case with other $10 \mathrm{Mbps} / 3 \mathrm{Mbps}$ Ookla data for Tribal lands, we do not report results because of concerns with the representativeness of the Ookla data for these areas. See supra Sections IV.B. 2 and IV.B.3.

[^8]:    ${ }^{131}$ We present these results at the census block group, the smallest geographic areas for which income data is available, to accurately examine how the deployment rate varies with income measures in the geographic area.

[^9]:    ${ }^{132}$ We group tribal lands as designated by their 2010 census block delineations. Alaskan Villages include census blocks that are designated as Alaskan Native village statistical areas. Hawaiian Home Lands include census blocks that were established by the Hawaiian Homes Commission Act of 1921. Tribal statistical areas are statistical American Indian areas. These are defined for a federally-recognized Tribe that does not have reservation or offreservation trust land; specifically, a Tribal designated statistical area (TDSA) or Oklahoma Tribal statistical area (OTSA). The Lower 48 States category includes census blocks designated as: (1) Joint Use Areas; (2) legal, federally-recognized American Indian area consisting of reservation and associated off-reservation trust land; (3) legal, federally-recognized American Indian area consisting of reservation only; and (4) legal, federallyrecognized American Indian area consisting of off-reservation trust land only. We present more granular state-bystate Tribal lands data in an appendix. See infra Appendix 7 (Deployment of Fixed Terrestrial $25 \mathrm{Mbps} / 3 \mathrm{Mbps}$ Services and/or Mobile LTE with a Minimum Advertised Speed of 5 Mbps/ 1 Mbps by Tribal Lands and State).

[^10]:    ${ }^{133}$ We present adoption data for each state and the District of Columbia in an Appendix. See infra Appendix 8 (Adoption Rate for Fixed Terrestrial Services in the United States and District of Columbia (Data as of December 2017)).
    ${ }^{134}$ The subscriber data is reported for the census tract, not census block. Thus, we aggregate the deployment data up to the census tract. We calculate adoption rates for the following geographic areas: the U.S. as a whole, all urban core census tracts, all non-urban core census tracts, the county (or county equivalent), and for each state and the District of Columbia. A census tract is designated as "Urban Core" if it has a land area less than three square miles and a population density of at least 1,000 people per square mile. A census tract is designated as "Non-Urban Core" if we have not designated the census tract as Urban Core. A census tract is designated Tribal lands if more than $50 \%$ of the land area is Tribal land.
