## I. INTRODUCTION

1. Section 706 of the Telecommunications Act of 1996 charges the Commission with "encourag[ing] the deployment on a reasonable and timely basis of advanced telecommunications capability to all Americans" by removing barriers to infrastructure investment and by promoting competition in the telecommunications market. ${ }^{1}$ Over the last four years, the Commission's top priority has been closing the digital divide, in recognition that high-speed broadband and the digital opportunity it brings are increasingly essential to innovation, economic opportunity, healthcare, and civic engagement in today's modern society. With many jobs, schools, and healthcare services shifting to virtual environments in the wake of the ongoing COVID-19 pandemic, the need to deliver broadband connectivity across America has never been greater. Moreover, Americans in rural and remote regions continue to rely on broadband to stay connected to services and opportunities that are physically in distant locations. The Commission continues to take steps to narrow the digital divide by promoting competition in the telecommunications marketplace and removing barriers to infrastructure investment, and the data reveal that the Commission's efforts have been successful at delivering broadband to more Americans than ever before.
2. Fixed and mobile providers continue to make impressive gains in bringing high-speed broadband service to all Americans. Since the Commission's last Broadband Deployment Report, the number of Americans living in areas without access to at least $25 / 3 \mathrm{Mbps}$ (the Commission's current benchmark) has dropped from more than 18.1 million Americans at the end of 2018 to fewer than 14.5 million Americans at the end of 2019, a decrease of more than $20 \% .^{2}$ Moreover, more than three-quarters of those in newly served areas, nearly 3.7 million, are located in rural areas, bringing the number of rural Americans in areas served by at least $25 / 3 \mathrm{Mbps}$ to nearly $83 \% .^{3}$ Since 2016, the number of Americans living in rural areas lacking access to $25 / 3 \mathrm{Mbps}$ service has fallen more than $46 \%$. As a result, the ruralurban divide is rapidly closing; the gap between the percentage of urban Americans and the percentage of rural Americans with access to $25 / 3 \mathrm{Mbps}$ fixed broadband has been nearly halved, falling from 30 points at the end of 2016 to just 16 points at the end of 2019.4
3. With regard to mobile broadband, since 2018, the number of Americans lacking access to 4G LTE mobile broadband with a median speed of $10 / 3 \mathrm{Mbps}$ was reduced by more than $57 \%$, including a nearly $54 \%$ decrease among rural Americans. ${ }^{5}$ As of the end of 2019, the vast majority of Americans, $94 \%$ had access to both $25 / 3 \mathrm{Mbps}$ fixed broadband service and mobile broadband service with a median

[^0]speed of $10 / 3$ Mbps. ${ }^{6}$ Also as of the end of 2019, mobile providers now provide access to 5 G capability to approximately $60 \%$ of Americans. ${ }^{7}$ These strides in mobile broadband deployment were fueled by more than $\$ 29$ billion of capital expenditures in 2019 (roughly $18 \%$ of global mobile capital spending), the largest mobile broadband investment since 2015. ${ }^{8}$
4. Based on this compelling evidence, we find, for a third consecutive year, that advanced telecommunications capability is being deployed on a reasonable and timely basis. With this Report, the Commission fulfills the Congressional directive to report each year on the progress made in deploying broadband to all Americans. ${ }^{9}$ Despite this finding, our work to close the digital divide is not complete. The Commission will continue its efforts to ensure that all Americans have the ability to access broadband.

## II. BACKGROUND

5. Section 706(b) of the Telecommunications Act of 1996 requires the Commission annually to "initiate a notice of inquiry concerning the availability of advanced telecommunications capability to all Americans (including, in particular, elementary and secondary schools and classrooms) . . . ." ${ }^{10}$ In conducting this inquiry, the Commission must "determine whether advanced telecommunications capability is being deployed to all Americans in a reasonable and timely fashion." If that determination is negative, the Commission "shall take immediate action to accelerate deployment of such capability by removing barriers to infrastructure investment and by promoting competition in the telecommunications market." ${ }^{11}$
6. On August 19, 2020, the Commission released the Sixteenth Broadband Deployment Report Notice of Inquiry (Notice), seeking comment on how a range of factors may affect the deployment and availability of advanced telecommunications capability, and on whether and how to incorporate those factors in our section 706(b) analysis for both fixed and mobile services. ${ }^{12}$

## III. EVALUATING DEPLOYMENT OF ADVANCED TELECOMMUNICATIONS CAPABILITY TO ALL AMERICANS IN A REASONABLE AND TIMELY FASHION

7. In this Report, we holistically evaluate progress in the deployment of advanced telecommunications capability and whether that progress is occurring in a reasonable and timely fashion. We do so consistent with the Commission's evaluation in past releases of the Broadband Deployment Report and the Commission's proposal in the Notice. ${ }^{13}$ This Report continues to evaluate deployment of

[^1]fixed and mobile services over a rolling five-year time period (now 2015-2019), using the four categories presented in the 2019 and 2020 Reports: (1) the number of Americans with access to fixed services; (2) the number with access to mobile 4G LTE services; (3) the number with access to both fixed and mobile 4G LTE services; and (4) the number with access to at least one of either fixed or mobile 4G LTE services. ${ }^{14}$
8. We find substantial support in the record for continuing our use of a progress-based approach. ${ }^{15}$ As the Commission has previously explained:
[A] progress-based approach . . . is most consistent with the language of section 706-and enables the Commission to determine whether advanced telecommunications capability "is being deployed" in the manner that section 706 requires. . . . Congress intended that the Commission evaluate the current state of deployment to all Americans; it did not ask us to determine whether each and every American is served at this moment. ${ }^{16}$

Examining the progress of deployment therefore best effectuates Congress's charge to the Commission in section 706.
9. We agree with commenters that we must continue our efforts to close the digital divide and extend the reach of broadband deployment to all Americans. ${ }^{17}$ Section 706(a) mandates that we continue to promote deployment of advanced telecommunications capability to all Americans, ${ }^{18}$ and even though "current data continue to demonstrate significant ongoing progress," ${ }^{19}$ it remains the case that rural and Tribal areas continue to lag behind in broadband deployment. ${ }^{20}$ We therefore remain committed to closing the digital divide and ensuring that all Americans can share in the benefits of access to advanced telecommunications capability, and we will continue to monitor progress toward that goal. We agree with NTCA that the Commission's high-cost universal service programs have enabled "increased deployment and faster speeds" for Americans living in rural and hard-to-serve parts of the country. ${ }^{21}$ We also agree with commenters that urge the Commission to continue its work to expand access to spectrum to facilitate broadband deployment in the future. ${ }^{22}$ And we agree with ADTRAN that continuing to work with "state and local governments through the [Broadband Deployment Advisory Committee (BDAC)] process to help accelerate broadband deployment" is vital to increase broadband investment and adoption across America. ${ }^{23}$

## A. Defining Advanced Telecommunications Capability

10. As in the 2020 Report, we continue the Commission's practice of considering both fixed and mobile services as capable of independently meeting the definition of "advanced telecommunications capability" under section $706 .{ }^{24}$ This finding is consistent with the language of the statute, which defines advanced telecommunications capability "without regard to any transmission media or technology." ${ }^{25}$ Because both services "enable[] users to originate and receive high-quality voice, data, graphics, and video telecommunications, ${ }^{, 26}$ each service independently meets the section 706 definition. ${ }^{27}$ Despite both services' meeting the definition of advanced telecommunications capability, we find, consistent with the Commission's findings in past reports, that fixed and mobile services are not full substitutes. ${ }^{28}$ The weight of the record suggests that users generally treat fixed and mobile services as complements rather than substitutes. Consumers tend to subscribe to both services when they have the ability to do so, which suggests that, even though there is some overlap in functionality, both services continue to offer distinct capabilities for consumers. ${ }^{29}$ For example, mobile broadband services can be used while outside of the home. ${ }^{30}$ Fixed broadband services, as noted by commenters, tend to offer higher speeds ${ }^{31}$ with greater reliability ${ }^{32}$ and higher usage allowances than mobile services, ${ }^{33}$ which can make fixed broadband services more suitable for, among other things, large file transfers, ${ }^{34}$ long-form video, ${ }^{35}$ desktop school work, ${ }^{36}$ and sharing the same connection with multiple devices and users within the same home. ${ }^{37}$ Commenters also

note that mobile users tend to rely on fixed broadband via WiFi networks when available. ${ }^{38}$
11. While the record provides substantial evidence that fixed and mobile services are not substitutes, we recognize that consumers can substitute fixed and mobile broadband for some functionalities, such as when accessing certain services and applications like e-mail or social media. ${ }^{39}$ One commenter, Free State Foundation, suggests that we should treat mobile and fixed services as substitutes because both are technologically capable of $25 / 3 \mathrm{Mbps}$ speeds. ${ }^{40}$ The record demonstrates, however, that each service enables different situational uses: fixed broadband generally delivers faster speeds, permits higher consumption at a lower price, ${ }^{41}$ and has far higher data caps, ${ }^{42}$ whereas mobile broadband offers the convenience of Internet access outside the home. Finally, we are optimistic that increased deployment of 5 G may allow mobile services to serve as an alternative to fixed services. ${ }^{43}$ But we agree with those commenters that indicate that any such assessment is premature, as providers are still rolling out 5 G out as a commercial service, ${ }^{44}$ and we do not know for certain whether consumers will treat mobile 5G as a substitute for fixed services. ${ }^{45}$ Accordingly, we find, as before, that fixed broadband and mobile wireless broadband services are not substitutes in all cases. ${ }^{46}$ We continue to assess advanced telecommunications capability by analyzing mobile and fixed services both separately and together for a more complete understanding of whether these services are being deployed to all Americans in a reasonable and timely fashion. ${ }^{47}$
12. Performance Benchmarks for Fixed Service. We find that the current speed benchmark of $25 / 3 \mathrm{Mbps}$ remains an appropriate measure by which to assess whether a fixed service is providing advanced telecommunications capability. We conclude that fixed services with speeds of $25 / 3 \mathrm{Mbps}$

[^3]continue to meet the statutory definition of advanced telecommunications capability; that is, such services "enable[] users to originate and receive high-quality voice, data, graphics, and video telecommunications. ${ }^{4} 48$ This finding adopts the proposal in the Notice, and the record reflects significant support for maintaining the current fixed $25 / 3 \mathrm{Mbps}$ speed benchmark. ${ }^{49}$ We agree with ACA Connects that "broadband service at this speed tier continues to provide users the ability 'to originate and receive high-quality voice, data, graphics, and video telecommunications', and that maintaining the same benchmark across multiple years' reports makes it easier to measure deployment progress over time., ${ }^{50}$
13. Some commenters suggest that we should increase our speed benchmark, given that more Americans have access to faster broadband speeds, ${ }^{51}$ and because of the increased demand for dataintensive services such as telework platforms, distance learning, telehealth, and video conferencing. ${ }^{52}$ Commenters also suggest adopting symmetrical download/upload speed benchmarks. ${ }^{53}$ We decline these suggestions for various reasons. First, the definition of advanced telecommunications capability in section 706 does not suggest that "advanced" necessarily means the highest quality service possible. ${ }^{54}$ As ADTRAN acknowledges, "the benchmark ought to be tied to the statutory definition of 'advanced telecommunications capability,' rather than being set as an 'audacious goal' as some have advocated. ${ }^{55}$ Second, many commenters provide convincing evidence that the recent increase in usage of videoconferencing and telework platforms has not generally necessitated increased bandwidth or higher broadband speeds. ${ }^{56}$ As NCTA states, "even as the COVID crisis has caused an exponential increase in the use of video conferencing applications for work, school, and telehealth, it remains the case that a $25 / 3$ connection generally is sufficient to enable such applications." ${ }^{57}$ We agree with WISPA that "[b]y

[^4]${ }^{54} 47$ U.S.C. § 1302(d)(1); see Free State Foundation Comments at 11-12 ("A drastic or 'audacious' re-definition of the agency's broadband benchmarks . . . has no basis in the plain language of Section 706's mandate, and it appears contrary to the statute's directive that the Commission make its deployment determination based on a reasonableness standard.").
${ }^{55}$ ADTRAN Comments at 6-7.
${ }^{56}$ See, e.g., NCTA Comments at 2; USTelecom Comments at 11-12; Free State Foundation Comments at 11; WISPA Comments at 6-7 (arguing that "[n]othing has changed in the intervening few months [since the 2020 Report] to disturb [its] well-supported finding" that the current speed benchmark of $25 / 3 \mathrm{Mbps}$ remains an appropriate measure by which to assess whether fixed service is providing advanced telecommunications capability).
${ }^{57}$ NCTA Comments at 2; see also USTelecom Comments at 12; Free State Foundation Comments at 11; WISPA Comments at 6 (" $[\mathrm{T}]$ he speed required for the applications that most broadband consumers use has not changed substantially . . and actual subscriptions have not yet consistently surpassed the benchmark level.").
maintaining consistent criteria, the Commission is better able to track changes in service availability and performance over time ${ }^{58}$ and a consistent benchmark is particularly valuable given the country's changed circumstances due to the pandemic. Fourth, while some commenters argue for adopting symmetrical speed benchmarks, whereby the download speed and the upload speed are the same in any given benchmark, they largely make unsupported assertions about the significance of higher upload speeds, and do not provide convincing, data-driven reasoning demonstrating the need for making this change. ${ }^{59}$
14. Notably, while $25 / 3 \mathrm{Mbps}$ remains our fixed speed benchmark for purposes of conducting our inquiry under section 706, we continue the Commission's practice of showing progress of fixed services at multiple speed thresholds, including three speeds above the benchmark ( $50 / 5 \mathrm{Mbps}$, $100 / 10 \mathrm{Mbps}$, and $250 / 25 \mathrm{Mbps}$ ), to enable the Commission and the public to monitor consumer usage trends and marketplace developments. Commenters support this approach. ${ }^{60}$ We agree with Free State Foundation and NCTA that we should assess a wider range of speed tiers, ${ }^{61}$ but we find, consistent with the 2020 Report and long-standing Commission precedent, that a "single fixed speed benchmark provides a useful and administrable way of conducting our inquiry." ${ }^{62}$ Furthermore, we maintain that a single fixed benchmark allows us to more easily understand consumer usage trends and marketplace developments and to track progress over time. We therefore evaluate progress using a variety of speed tier metrics and categories across technologies. ${ }^{63}$
15. Performance Benchmarks for Mobile Service. Consistent with past Commission practice, we evaluate deployment of advanced telecommunications capability for mobile services using multiple metrics instead of relying on a single benchmark. ${ }^{64}$ As the Commission concluded in previous reports, we find that a single benchmark is unreliable in the mobile wireless context due to the inherent variability in

[^5]${ }^{59}$ See, e.g., Broadband Connects America Comments at 7; Open Technology Institute \& Access Now Comments at 11; Common Cause et al. Comments at 9. One commenter advocating for a $100 / 100 \mathrm{Mbps}$ benchmark cited an increase in upstream consumption as a reason to adopt the change, but did not point to data which show that the current benchmarks are insufficient. See Common Cause et al. Reply at 6.
${ }^{60}$ See, e.g., ADTRAN Comments at 5-6; NCTA Comments at 2.
${ }^{61}$ Free State Foundation Comments at 10-11; NCTA Comments at 3.
${ }^{62}$ See 2020 Report, 35 FCC Rcd at 8993, para. 15; 2019 Report, 34 FCC Rcd at 3863, para. 15; 2018 Report, 33 FCC Rcd at 1669, para. 25; see also Inquiry Concerning the Deployment of Advanced Telecommunications Capability to All Americans in a Reasonable and Timely Fashion, and Possible Steps to Accelerate Such Deployment Pursuant to Section 706 of the Telecommunications Act of 1996, as Amended by the Broadband Data Improvement Act, GN Docket No. 15-191, 2016 Broadband Deployment Report, 31 FCC Rcd 699, 707, para. 19 (2016 Report); Inquiry Concerning the Deployment of Advanced Telecommunications Capability to All Americans in a Reasonable and Timely Fashion, and Possible Steps to Accelerate Such Deployment Pursuant to Section 706 of the Telecommunications Act of 1996, as Amended by the Broadband Data Improvement Act, GN Docket No. 14126, 2015 Broadband Progress Report and Notice of Inquiry on Immediate Action to Accelerate Deployment, 30 FCC Rcd 1375, 1391, para. 23 (2015) (2015 Report).
${ }^{63}$ While some commenters urge the Commission to adopt a benchmark based on an alternative metric from speed, the proffered approaches fail to provide a methodology or reliable data sources to implement their suggestions. See, e.g., CTIA Comments at 26-27 ("Given that many factors affect the consumer's wireless experience, the Commission should take a holistic view of deployment progress, factoring in such data points as investment and cell site growth—and not define 'progress' by speed only."); Massachusetts Department Reply at 10 ("[T]he FCC [should] incorporate affordability in its Section 706 analysis."); Common Cause et al. Comments at 15 ("Such a metric should include actual speed data, latency, data caps, denials of service, and network vulnerability and resilience."); Utilities Technology Council Reply at 6-7 ("[N]umerous comments support including latency, affordability and reliability as additional metrics for assessing broadband deployment in recognition that 'quality of service is a key component of access to broadband.' UTC supports these comments.").
${ }^{64} 2020$ Report, 35 FCC Rcd at 8993, para. 16; 2019 Report, 34 FCC Rcd at 3863-64, paras. 16-17; 2018 Report, 33 FCC Rcd at 1672-74, paras. 30-34.
the performance characteristics of mobile service, both geographically and temporally ${ }_{6}{ }^{65}$ Accordingly, we first analyze provider-reported 4G LTE coverage based on the Commission's Form 477 data, where service providers claim a minimum advertised speed of $5 / 1 \mathrm{Mbps} .{ }^{66}$ We do not assert that $5 / 1 \mathrm{Mbps}$ is a mobile advanced telecommunications capability benchmark; rather, we use the $5 / 1 \mathrm{Mbps}$ minimum advertised speed as a check to ensure that the 4G LTE deployed to an area has sufficient backhaul and other capabilities to offer 4G LTE in a manner consistent with being an advanced telecommunications capability. ${ }^{67}$ Second, in areas where providers claim to provide 4G LTE with a minimum $5 / 1 \mathrm{Mbps}$ advertised speed, we supplement provider-reported data with Ookla speed-test data, which identify areas showing median speed tests of at least $10 / 3 \mathrm{Mbps}$. This supplemental approach attempts to address certain limitations of the current FCC Form 477 mobile data, while helping the Commission understand the extent to which American consumers today are receiving speeds higher than $5 / 1 \mathrm{Mbps} .{ }^{68}$ By continuing the Commission's prior approach, we also can more readily assess progress over time. ${ }^{69}$
16. We find, therefore, that retaining the current approach of using multiple metrics is appropriate for this Report at this time. ${ }^{70}$ We agree with CTIA that mobile wireless service capability

[^6]${ }^{69} 2020$ Report, 35 FCC Rcd at 8994, para. 16; 2019 Report, 34 FCC Rcd at 3864, para. 16 ("Overall, retaining this methodology allows consistent metrics by which we can evaluate whether mobile advanced telecommunications capability is improving for American consumers."); Free State Foundation Comments at 3.
${ }^{70} 47$ U.S.C. § 1302(d)(1); 2020 Report, 35 FCC Rcd at 8994, para. 17; 2019 Report, 34 FCC Rcd at 3863-64, paras. 16-17. The record does not justify altering the Commission's approach of analyzing both FCC Form 477 data and Ookla data at speeds of $5 / 1 \mathrm{Mbps}$ and $10 / 3 \mathrm{Mbps}$, respectively. See Free State Foundation Comments at 3, 10-11 (agreeing with the $5 / 1 \mathrm{Mbps}, 10 / 3 \mathrm{Mbps}$ approach although also advocating for a wider range of speed tiers to be analyzed, if available); CTIA Comments at 27 (arguing that the Commission should adopt a more "holistic approach" that assesses factors related to consumers wireless experience beyond speeds and coverage data); see also 2019 Report, 34 FCC Rcd at 3864, para. 17 (rejecting CTIA's alternative methodology proposal for assessing the mobile experience).
should be assessed holistically, given the inherent variability of wireless service. ${ }^{71}$ We also have begun collecting 5G New Radio (5G-NR) deployment data to ensure that both the Commission and consumers have an accurate account of 5 G deployment. ${ }^{72}$ No commenter opposed this approach.
17. Other Benchmarks. We decline suggestions of some commenters to adopt additional benchmarks. While some commenters suggest adoption of additional benchmarks, such as latency, ${ }^{73}$ they do not offer a reliable and sufficiently comprehensive data source for such analysis. ${ }^{74}$ We therefore decline, as the Commission has previously, ${ }^{75}$ to incorporate latency into our section 706 analysis. Additionally, we decline the requests of some commenters to consider affordability. ${ }^{76}$ For purposes of this Report, we agree with ADTRAN and others that such a metric falls outside the scope of our section 706 inquiry. ${ }^{77}$ We reiterate the Commission's finding in the 2019 Report that "[w]hile factors such as data allowances or pricing may affect consumers' use of advanced telecommunications capabilities or influence decisions concerning the purchase of these services in the first instance, such considerations do not affect the underlying determination of whether advanced telecommunications capability has been deployed and made available to customers in a given area." ${ }^{78}$ Notably, commenters that support including non-performance metrics fail to cite reliable, comprehensive data sources that we could use, or offer sound methodologies for incorporating these metrics into the section 706 inquiry. ${ }^{79}$

## B. Demographic Information

18. Section 706(c) directs the Commission to compile a list of geographical areas that are not served by any provider of advanced telecommunications capability and, to the extent that data from the Census Bureau are available, to determine, for each unserved area, the population, the population density, and the average per capita income. ${ }^{80}$ Once again, we include a demographic data analysis below in Section IV.C., and show the availability of advanced telecommunications capability on a county-bycounty basis with demographic information in Appendix D. ${ }^{81}$

[^7]${ }^{77}$ ADTRAN Comments at 4; ADTRAN Reply at 3-4 (explaining that affordability is "not part of Congress' specified focus in Section 706"); see also USTelecom Reply at 4-5; WISPA Reply at 8-9.

782019 Report, 34 FCC Rcd at 3866, para. 19 (quoting the Commission's finding in the 2018 Report); 2018 Report, 33 FCC Rcd at 1675, para. 39. The Commission reached the same conclusion in both the 2019 Report and the 2020 Report. 2019 Report, 34 FCC Rcd at 3866, para. 19; 2020 Report, 35 FCC Rcd at 8995, para. 19.
${ }^{79}$ See, e.g., Broadband Connects America Comments at 3; Benton Institute et al. Comments at 4; Open Technology Institute Comments at 16; Common Cause et al. Comments at 14, 33; Massachusetts Department Reply at 9; Open Technology Institute \& Access Now Reply at 20-21; Utilities Technology Council Reply at 6-7.
${ }^{80} 47$ U.S.C. § 1302(c).

## C. Schools and Classrooms

19. Section 706 (b) also specifies that our annual inquiry concerning the availability of advanced telecommunications capability to all Americans must include "elementary and secondary schools and classrooms." ${ }^{82}$ As in the 2020 Report, we continue to assess the current state of deployment in elementary and secondary schools in Section IV.F. below, using a long-term goal for broadband connectivity to schools of 1 Gbps per 1,000 students and staff, respectively. In the 2020 Report, the Commission found that $99 \%$ of school districts met its short-term goal of 100 Mbps per 1,000 students and staff and therefore no longer consider such goal to be a meaningful measure of the progress in deployment of advanced telecommunications services. ${ }^{83}$

## D. Tribal Lands

20. We find that Tribal lands ${ }^{84}$ continue to face significant obstacles to broadband deployment, as the Commission has in the past. As reflected in the three most recent Reports, deployment of advanced telecommunications capability on certain Tribal lands, particularly rural Tribal lands, lags behind deployment in other, non-Tribal areas. ${ }^{85}$ Many of these lands are located disproportionately in rural areas, which tend to be less densely populated than rural non-Tribal areas. The remote, isolated nature of these areas, combined with challenging terrain and lower incomes, increase the cost of network deployment and entry, thereby reducing the profitability of providing service. ${ }^{86}$ Due to

8247 U.S.C. § 1302(b).
${ }^{83} 2020$ Report, 35 FCC Rcd at 9017-18, para. 52.
${ }^{84}$ A census tract is designated Tribal lands if more than $50 \%$ of the land area is Tribal land. For purposes of the analysis of Tribal lands in this Report, we use the definition that was used in the 2018 Commercial Marketplace Report and in the Commission's Broadband Deployment Reports since 2012. See 2018 Communications Marketplace Report, 33 FCC Rcd at 12652, para. 187 \& n.598; Eighth Broadband Progress Report, 27 FCC Rcd 10342, 10414-15 (2012). We acknowledge that the Commission has used other definitions of Tribal lands in different contexts. See, e.g., Transforming the 2.5 GHz Band, Report and Order, 34 FCC Rcd 5446, 5465-66, paras. 51-55 (2019), Bridging the Digital Divide for Low-Income Consumers, Fourth Report and Order, Order on Reconsideration, Memorandum Opinion and Order, Notice of Proposed Rulemaking, and Notice of Inquiry, 32 FCC Rcd 10475 (2017); Connect America Fund et al., Report and Order, Further Notice of Proposed Rulemaking, and Order on Reconsideration, 33 FCC Rcd 11893, 11910-11, para. 55 n. 122 (2018); Establishing a 5G Fund for Rural America, GN Docket No. 20-32, Report and Order, FCC 20-150, at 16-21, paras. 40-44 (Oct. 29, 2020). However, for purposes of this Report, we maintain the Commission's definition as previously employed.

Our assessment of Tribal lands in this Report begins by examining the census blocks that have been coded by the Census Bureau as federally recognized Tribal lands for the 2010 Census. These areas fall into one of the following American Indian Area/Alaska Native Area/Hawaiian Home Land Class categories: (1) Joint Use Areas; (2) legal federally recognized American Indian area consisting of reservation and associated off-reservation trust land;
(3) legal federally recognized American Indian area consisting of reservation only; (4) legal federally recognized American Indian area consisting of off-reservation trust land only; (5) statistical American Indian area defined for a federally recognized Tribe that does not have reservation or off-reservation trust land, specifically a Tribal designated statistical area (TDSA) or Oklahoma Tribal Statistical Area (OTSA); (6) Alaskan Native village statistical area; and (7) Hawaiian Home Lands established by the Hawaiian Homes Commission Act of 1921. We exclude state recognized areas from the analysis of Tribal lands. We note that the Tribal Statistical Areas are largely in Oklahoma, but they also include areas in California, New York, and Washington. To assess adoption rates on Tribal lands we designate a census tract as Tribal lands if more than $50 \%$ of the land area is Tribal land.
${ }^{85} 2020$ Report, 35 FCC Rcd at 8996-97, paras. 22-23; 2019 Report, 34 FCC Rcd at 3866, para. 22, 3883-85, paras. 44-46, Figs. 10 and 11; 2018 Report, 33 FCC Rcd at 1681-86, paras. 50-57.

(continued....)
the challenges in accounting for all types of Tribal lands and obstacles to infrastructure investment, we agree that continued work is needed to spur broadband deployment in these areas. ${ }^{87}$ Despite these challenges, our data reveals continuing progress in deployment, and we present our measurement of deployment data on Tribal lands below in Section IV.D.

## IV. BROADBAND DEPLOYMENT AND AVAILABILITY

## A. Data Sources and Methodologies

21. We continue the Commission's practice of relying primarily on the FCC Form 477 deployment data to evaluate consumers' broadband options for fixed terrestrial and mobile services. Notwithstanding its flaws, we agree with commenters that the FCC Form 477 data remains the most reliable and comprehensive data to assess broadband availability to complete our section 706 inquiry, ${ }^{88}$ a conclusion the Commission has consistently reached in the past. ${ }^{89}$ The FCC Form 477 deployment data are also available to the public, which increases the transparency of our analysis and permits the public to independently assess our broadband service deployment data. ${ }^{90}$ The Commission has collected FCC Form 477 deployment data since 2014, and thus, these data have provided a consistent yardstick against which to measure year-over-year progress of broadband deployment. ${ }^{91}$ In August 2019, the Commission adopted new requirements for broadband mapping as part of its Digital Opportunity Data Collection proceeding for collecting granular, precise coverage data. ${ }^{92}$ However, the Broadband DATA Act
(Continued from previous page)
Science, and Transportation; House of Representatives Committee on Energy and Commerce (May 1, 2019), https://docs.fcc.gov/public/attachments/DOC-357269A1.pdf; Rural Digital Opportunity Fund; Connect America Fund, WC Docket Nos. 10-90, 19-126, Report and Order, 35 FCC Rcd 686 (2020) (Rural Digital Opportunity Fund Order) (creating a Rural Digital Opportunity Fund to target support to areas that lack access to $25 / 3 \mathrm{Mbps}$ broadband service, including prioritizing bids to serve Tribal lands).
${ }^{87}$ See, e.g., Benton Institute et al. Comments at 26 (access in Tribal lands still lags behind non-Tribal lands; Commission needs more granular data about service coverage, affordability, etc. to accurately measure the extent of this disparity); Open Technology Institute \& Access Now Comments at 22-23 (Commission does not currently have a formal process to obtain Tribal input on the accuracy of FCC Form 477 data, must start collecting accurate data on broadband in Tribal lands); Utilities Technology Council Reply at 2 ( $28 \%$ of Americans in Tribal areas still lack access to $25 / 3 \mathrm{Mbps}$ speeds).
${ }^{88}$ See ADTRAN Comments at 9-10; Free State Foundation Comments at 13; USTelecom Comments at 15; WISPA Comments at 8 ; ADTRAN Reply at 4-5; USTelecom Reply at 8-9; WISPA Reply at 9 .
${ }^{89}$ See 2020 Report, 35 FCC Rcd at 8997-98, para. 24; 2019 Report, 34 FCC Rcd at 3868, para. 25; 2018 Communications Marketplace Report 34 FCC Rcd at 12651, para. 184. For this Report, we exclude Barrier Communications Corporation's deployment data because the Commission proposed a $\$ 163,912$ forfeiture penalty based upon a finding that the company vastly overstated its data, failed to provide accurate FCC Form 477 data, and failed to provide accurate responses to the Enforcement Bureau's Letters of Inquiry. Barrier Communications Corporation d/b/a BarrierFree, Notice of Apparent Liability for Forfeiture, 35 FCC Rcd 10186, 10186-87, para. 2 (2020).
${ }^{90}$ FCC, Form 477 Resources, https://www.fcc.gov/economics-analytics/industry-analysis-division/form-477resources (last visited Oct. 27, 2020). All FCC Form 477 data used in this Report have been certified as accurate by the filers. We note that the Report's analysis may understate or overstate consumers' options for services to the extent that broadband providers fail to report data or misreport data. See FCC, Explanation of Broadband Deployment Data, https://www.fcc.gov/general/explanation-broadband-deployment-data (last visited Nov. 19, 2020) (describing quality and consistency checks performed on providers' submitted data and explaining any adjustments made to the FCC Form 477 data as filed).
${ }^{91}$ See Dr. Timothy J. Tardiff Reply Comments at 3 (asserting that FCC Form 477 data provide a consistent set of measures to allow parties to see the evolution of broadband across time and geography).
${ }^{92}$ See Digital Opportunity Data Collection Second Order and Third Further Notice, 35 FCC Rcd at 7461, para. 1; See generally, Digital Opportunity Data Collection Report and Order and Second Further Notice, 34 FCC Rcd 7505.
prohibits the Commission from relying on the Universal Service Administrative Company-the administrator of the Universal Service Fund and the entity the Commission intended to carry out various administrative responsibilities in connection with the new broadband maps. As a result, the Commission must wait for Congress to appropriate necessary funding to develop these new maps. ${ }^{93}$
22. We measure fixed deployment data at the census block level. FCC Form 477 filers report a list of census blocks in which they provide access to broadband. ${ }^{94}$ For purposes of the analysis of access to advanced telecommunications capability in this Report, a census block is classified as served if the FCC Form 477 data indicate that service is available in the census block, even if not to every location. ${ }^{95}$ Therefore, it is not necessarily the case that every household, housing unit, or person will have coverage from a given service provider in a census block that this analysis indicates is served. ${ }^{96}$ Thus, as the Commission has previously explained, this analysis could overstate the coverage experienced by some consumers, especially in large or irregularly-shaped census blocks. ${ }^{97}$ However, these data nonetheless remain the best and most granular data available for our analysis at this point in time. Moreover, we find that using a consistent unit of measurement (the census block) is an effective tool for evaluating how deployment is progressing over time.
23. We measure mobile network coverage based on a set of maps that contain information on deployment at a detailed geographic level. ${ }^{98}$ In conducting this analysis, we use the actual-area
${ }^{93}$ Broadband Deployment Accuracy and Technological Availability Act (Broadband DATA Act), Pub. L. No. 116130, 134 Stat. 228 (2020) (codified at 47 U.S.C. §§ 641-646).
${ }^{94}$ See Modernizing the FCC Form 477 Data Program, WC Docket No. 11-10, Report and Order, 28 FCC Rcd 9887, 9902, para. 32 (2013).
${ }^{95}$ The Commission's instructions for completing FCC Form 477 state: "For purposes of this form, fixed broadband connections are available in a census block if the provider does, or could, within a service interval that is typical for that type of connection-that is, without an extraordinary commitment of resources-provision two-way data transmission to and from the Internet with advertised speeds exceeding 200 kbps in at least one direction to end-user premises in the census block." FCC, FCC Form 477 Local Telephone Competition and Broadband Report Instructions, at 17 (2016), https://us-fcc.box.com/v/Form477InstThruJune19 (2018 FCC Form 477 Instructions) (emphasis in original) (pertinent to the data on which this Report is based); FCC, FCC Form 477 Local Telephone Competition and Broadband Report Instructions, at 18 (2019), https://us-fcc.app.box.com/v/Form477Instructions (2019 FCC Form 477 Instructions) (current version).
${ }^{96}$ A household "consists of all the people who occupy a housing unit. A house, an apartment or other group of rooms, or a single room, is regarded as a housing unit when it is occupied or intended for occupancy as separate living quarters; that is, when the occupants do not live with any other persons in the structure and there is direct access from the outside or through a common hall." U.S. Census Bureau, Subject Definitions (Aug. 25, 2018), https://www.census.gov/programs-surveys/cps/technical-documentation/subject-definitions.html\#household. Commission staff developed population estimates for 2011-19 by updating the 2010 census block population estimates. These estimates are based upon annual U.S. Census mid-year county (or county-equivalent) level population and housing unit estimates for the 50 states, the District of Columbia, and Puerto Rico. These data are used in conjunction with U.S. Census Bureau TIGER data to indicate new roads, that is, new housing development, to distribute population amongst the census blocks comprising each county (or county-equivalent). FCC, Staff Block Estimates, https://www.fcc.gov/reports-research/data/staff-block-estimates (last visited Oct. 27, 2020).
${ }^{97}$ See, e.g., 2020 Report, 35 FCC Rcd at 8998, para. 26; 2019 Report, 34 FCC Rcd at 3869, para. 25 n. 92.
${ }^{98}$ Currently, FCC Form 477 collects broadband deployment data from facilities-based providers of fixed and mobile broadband service. See 47 CFR § 1.7001(b). The FCC Form 477 reporting requirements exclude providers of terrestrial wireless "hot spot" services, like local-area Wi-Fi or Wi-Fi within public places, but include facilitiesbased network providers that provide resale of mobile services. Facilities-based providers of mobile service submit polygons in a shapefile format representing geographic coverage nationwide (including U.S. territories) for each transmission technology (e.g., 5G-NR, 4G LTE, CDMA-based, GSM-based), indicating the geographic areas in which users should expect to receive the minimum upload and download speeds advertised by the service provider for the deployed technologies. 2019 FCC Form 477 Instructions.
methodology, which analyzes FCC Form 477 mobile broadband data on a sub-census-block level and calculates the percentage of each census block covered by each service provider by technology. Unlike the centroid methodology, ${ }^{99}$ in which a particular entire census block is either considered to be covered or not, the actual-area methodology estimates the area of the census block that is covered. ${ }^{100}$ However, because we currently do not know the distribution of the population at the sub-census-block level, we must approximate the population covered by each technology. To do this, we assume, for purposes of this Report, that the population of a census block is uniformly distributed such that the fraction of the population covered in a block is proportional to the fraction of the actual area covered. We then sum the estimated covered population across blocks to estimate the total covered population within the United States. Likewise, we assume that the fraction of the road miles covered in a block is proportional to the fraction of the actual area covered. ${ }^{101}$ Our analysis of deployment for both fixed and mobile 4G LTE services in Section IV.B uses 2010 census block population data that Commission staff has updated to account for population growth and economic development.
24. As the Commission has repeatedly stated, having accurate and reliable broadband deployment data is critical not only to the Commission, but also to other federal policymakers, state policymakers, and consumers. ${ }^{102}$ We observe that, while the current FCC Form 477 deployment data are an improvement over the deployment data previously available on a national scale, questions have arisen in various contexts over the past several years regarding the accuracy of coverage reported by FCC Form 477 deployment data. ${ }^{103}$ Indeed, some commenters offer criticism of the FCC Form 477 data, ${ }^{104}$ as well
(Continued from previous page)
The scope and nature of the FCC Form 477 data on mobile services coverage is an improvement over earlier data sources in certain key respects, such as the uniformity of data reporting. See Inquiry Concerning the Deployment of Advanced Telecommunications Capability to All Americans in a Reasonable and Timely Fashion, and Possible Steps to Accelerate Such Deployment Pursuant to Section 706 of the Telecommunications Act of 1996, as Amended by the Broadband Data Improvement Act, 2016 Broadband Progress Report, 31 FCC Rcd 699, 708-09, para. 22 (2016) (2016 Broadband Progress Report) ("[D]ata from the Form 477 . . . help us better analyze mobile broadband deployment than in years past.").
${ }^{99}$ The centroid methodology considers a census block covered if the geometric center point, or centroid, is covered. The methodology estimates coverage of population, land, and road miles by aggregating the totals for "covered" census blocks. Twentieth Wireless Competition Report, 32 FCC Rcd at 9016-17, para. 71. In practice, actual-area and centroid methodologies yield similar results at the national level. Twentieth Wireless Competition Report, 32 FCC Rcd at 9017-18, para. 72.
${ }^{100}$ This sub-census-block analysis can determine the unique combination of service providers serving a particular percentage of the area in a census block with a certain technology. As this analysis was done at each technology level, the set of unique combinations that it produces are valid for each individual technology, but not across multiple technologies. Essentially, we can distinguish the unique percentages covered by various service providers at the sub-census-block level using a particular technology (e.g., 4G LTE), but we currently cannot determine how this interplays with other technologies (e.g., with 2 G or 3 G technologies).
${ }^{101}$ In order to fully take advantage of the increase in precision offered by the actual-area coverage methodology, spatially accurate representations of population and road miles would be necessary. We do not have access to such information for the current Report, however.
${ }^{102}$ See Digital Opportunity Data Collection Second Order and Third Further Notice, 35 FCC Rcd at 7461, para. 1; Modernizing the FCC Form 477 Data Program, WC Docket No. 11-10, Further Notice of Proposed Rulemaking, 32 FCC Rcd 6329, 6331-32, para. 8 (2017) (2017 Data Collection Improvement FNPRM). For purposes of this Report, the "Digital Opportunity Data Collection proceeding" refers collectively to the Digital Opportunity Data Collection Second Order and Third Further Notice and the Digital Opportunity Data Collection Order and Second Further Notice. See FCC, Digital Opportunity Data Collection (DODC), https://www.fcc.gov/digital-opportunity-data-collection-dodc (last visited Oct. 27, 2020). The Commission has also used this proceeding to implement the Broadband DATA Act's provisions since its passage.
${ }^{103}$ Digital Opportunity Data Collection Second Order and Third Further Notice, 35 FCC Rcd, 7462-63, para. 5; Digital Opportunity Data Collection Order and Second Further Notice, 34 FCC Rcd at 7509, para. 10; 2017 Data
(continued....)
as recommendations for how to improve the Commission's data, ${ }^{105}$ this Report is not the appropriate vehicle for the Commission to make changes to the data collection. ${ }^{106}$ Instead, the Commission has revised the FCC Form 477 and established the Digital Opportunity Data Collection to collect and verify granular, precise data on fixed and mobile broadband availability. ${ }^{107}$ After the Commission initiated its Digital Opportunity Data Collection proceeding, Congress enacted the Broadband DATA Act, which largely affirmed the approach to broadband mapping the Commission adopted in the Digital Opportunity Data Collection. ${ }^{108}$ We note that Congress has only very recently appropriated funding for the creation and maintenance of the systems needed to make the Digital Opportunity Data Collection operational, ${ }^{109}$ and data from that collection are not yet available. ${ }^{110}$
25. Starting with the December 2019 FCC Form 477 data collection, the wireless reporting requirements were changed to provide more useful information to the public and to streamline unnecessary filings. ${ }^{111}$ Specifically, minimum advertised or expected speeds and provider-specific coverage data, reported to the FCC but previously kept confidential, are now publicly released. ${ }^{112}$ Mobile providers are no longer required to report coverage by spectrum band, as the FCC usually collects bandspecific data from providers directly when needed. ${ }^{113}$ Mobile providers now must separately report coverage that satisfies the 5G-NR standards developed by the 3rd Generation Partnership Project

[^8](3GPP). ${ }^{114}$ In general, mobile broadband coverage data must be submitted in four streamlined categories: 5G-NR, 4G LTE, CDMA-based, and GSM-based, instead of the previous nine codes. ${ }^{115}$ The voice coverage data reporting requirements have been simplified consistent with the revisions to the requirements for FCC Form 477 mobile broadband reporting. ${ }^{116}$
26. We provide deployment estimates for fixed terrestrial services at speeds of $10 / 1 \mathrm{Mbps}$, $25 / 3 \mathrm{Mbps}, 50 / 5 \mathrm{Mbps}, 100 / 10 \mathrm{Mbps}$, and $250 / 25 \mathrm{Mbps}$ based upon year-end data from 2015 to 2019. We exclude the U.S. Territories from the figures that report the five-year progression of deployment because of anomalies in the historical deployment data for Puerto Rico and the U.S. Virgin Islands. ${ }^{117}$ However, we include the U.S. Territories in the figures that report current deployment estimates wherever possible, ${ }^{118}$ including in Figure 3e, where we present the overall state of fixed and mobile deployment data for the entire United States. ${ }^{119}$
27. Satellite Services. We find that FCC Form 477 deployment data for satellite broadband service may overstate the extent to which satellite broadband is available. The FCC Form 477 deployment data for satellite broadband indicate that satellite service offering $25 / 3 \mathrm{Mbps}$ speeds is available to nearly all of the population. ${ }^{120}$ However, other FCC Form 477 data indicate that satellite services have a relatively low subscription rate despite their apparent widespread availability. ${ }^{121}$ In Appendix H, we provide deployment estimates for all fixed services, including satellite, from 2015 to 2019. ${ }^{122}$ Unless stated otherwise, our analysis in this section is based on all fixed terrestrial services, which do not include satellite.
28. Terrestrial Fixed Wireless Services. We note that the FCC Form 477 data for terrestrial
${ }^{114} \mathrm{Id}$. at 7524-25, para. 44-45.
${ }^{115}$ Id. at 7525-27, para. 46-51.
${ }^{116} \mathrm{Id}$. at 7527-29, para. 52-56.
${ }^{117}$ See 2020 Report, 35 FCC Rcd at 8999, para. 28. Puerto Rico and the U.S. Virgin Islands account for over $92 \%$ of the total combined population of the U.S. Territories; therefore, presenting historical data for these areas would likely misrepresent the progress in deployment that has occurred since 2015. The historical data suggests a 21.7 percentage point increase in deployment between 2015 and 2016. 2019 Report, 34 FCC Rcd at 3878, para. 39, Fig. 5. In addition, the year-end 2017 deployment data most likely significantly overstate deployment in Puerto Rico and the U.S. Virgin Islands at that time, because the data do not reflect infrastructure damage caused by Hurricanes Maria and Irma. See 2019 Report, 34 FCC Rcd at 3877-78, para. 39.
${ }^{118}$ Ookla data are unavailable for the U.S. Territories, thus figures and appendices presenting 10/3 Mbps mobile broadband based on Ookla data will not include the U.S. Territories, even for 2019.
${ }^{119}$ We also include data for Puerto Rico in our presentation of demographic data. Further, Appendices A-E include data for the U.S. Territories.
${ }^{120}$ More specifically, the data indicate that satellite service offering $25 / 3 \mathrm{Mbps}$ speeds is available to 331.274 million of the 331.777 million Americans, or approximately $100 \%$ of the U.S. population. FCC Form 477 Data as of December 31, 2019.
${ }^{121}$ FCC Form 477 data show that the adoption rate for satellite services (residential subscriptions divided by deployed households) for $10 / 1 \mathrm{Mbps}$ is $1 \%$. FCC Form 477 Data as of December 31, 2019. While satellite signal coverage may enable operators to offer services to wide swaths of the country, overall satellite capacity may limit the number of consumers that can actually subscribe to satellite service at any one time. 2020 Report, 35 FCC Rcd at 9000, para. 30 n .99 ; 2019 Report, 34 FCC Rcd at 3870, para. 28 n .98 ; 2018 Report, 33 FCC Rcd at 1681, para. 51 n.148; see also, e.g., ADTRAN Comments at 10 ("[W]hile the footprints of the satellite services provide near ubiquitous coverage for much of the country, capacity constraints limit the actual number of broadband service customers that could be served."); Common Cause et al. Comments at 18 (referencing previous Reports’ findings regarding the limitations of satellite service). For this reason, we will continue the Commission's past practice of reporting satellite broadband deployment data separately.

[^9]fixed wireless services appear to show that these services are widely available. However, these services have a sufficiently low subscription rate to potentially support a conclusion that the FCC Form 477 deployment data may overstate the extent to which terrestrial fixed wireless services are available. ${ }^{123}$ In Appendix I, we provide deployment estimates for terrestrial fixed wired services, that is, fixed services excluding fixed wireless and satellite services, for 2015 to $2019 .{ }^{124}$
29. Mobile Services. We continue to conclude that the best way to evaluate mobile broadband deployment and availability is to rely on FCC Form 477 data with a minimum advertised speed of $5 / 1 \mathrm{Mbps},{ }^{125}$ supplemented with Ookla's speed test data. These data sets serve as a proxy for the likely consumer experience in a given area while providing objective data to assess deployment progress. In future Reports, we anticipate using the data arising from the Digital Opportunity Data Collection as they become available. ${ }^{126}$ As the Commission has done in previous analyses of advanced telecommunications capability, we employ the centroid methodology in evaluating the FCC Form 477 4G LTE deployment data. ${ }^{127}$ We consider a census block to be covered by 4G LTE services if there is at least one service provider serving that census block that reports $5 / 1 \mathrm{Mbps}$ as the minimum advertised speed, based on their FCC Form 477 submission.
30. We recognize, however, that actual speeds may be considerably faster than the minimum advertised speed. Therefore, we also present estimates based on Ookla speed test data to evaluate the availability of 4G LTE with a median actual speed of $10 / 3 \mathrm{Mbps}$ or higher. ${ }^{128}$ We rely on the Ookla data to supplement our FCC Form 477 analysis primarily because they provide us with a large set of observations of actual speeds that customers receive. ${ }^{129}$ As the Commission has done previously, our

[^10]analysis of the availability of mobile 4 G LTE services with a median speed of $10 / 3 \mathrm{Mbps}$ includes actual speed test data in counties with at least 300 test observations. ${ }^{130}$ The more densely-populated counties have a higher likelihood of being included in this analysis, because there generally are more observations in those geographical areas with a higher population density. ${ }^{131}$ Although we do not have reliable on-theground speed data for every county in the United States, the Ookla data cover approximately $97 \%$ of the population of the United States, excluding the U.S. Territories, for which we do not have data. ${ }^{132}$ Using the existing FCC Form 477 data combined with on-the-ground speed test data provides the most reliable and comprehensive available data that are currently available on the extent of mobile coverage, ${ }^{133}$ and our continued use allows for a consistent measure of progress over time.
31. Schools. For purposes of this Report, we assess deployment in elementary and secondary schools based upon the best publicly-available data-specifically, that analyzed in Connected Nation's 2020 Connect K-12 Report. ${ }^{134}$ Connected Nation is the successor to EducationSuperHighway, which
(Continued from previous page)
location of the tester, and the vintage of the consumer's device. 2020 Report, 35 FCC Rcd at 9000-01, para. 33 n. 109 .
${ }^{130}$ See 2020 Report, 35 FCC Rcd at 9000-01, para. 33. This sample size threshold applies to each county for each time frame ( $2 \mathrm{H} 2015,2 \mathrm{H} 2016,2 \mathrm{H} 2017,2 \mathrm{H} 2018$, and 2 H 2019 ). If a county does not have at least 300 observations during one of these time frames, the county is not included in the actual speed analysis for the period during which the number of observations falls below 300. The 300 observations threshold is a conservative threshold and is based on a general mean and median sample size analysis. We consider a county to have a sufficient sample size if there are at least 300 total observations in a given year, after the cleaning and trimming rules have been applied. In contrast, in prior Reports, the Commission considered a county to have a sufficient sample size if there were at least 300 total observations in all of the five years, after cleaning and trimming rules had been applied. See 2020 Report, 35 FCC Rcd at $9000-01$, para. $33 \&$ n.111. This change in methodology increases the population considered in this analysis; thus, the results reported in prior Reports cannot be compared to the results reported in this Report. See, e.g., 2020 Report, 35 FCC Rcd at 9004-5, para.37. County geography is assigned using the latitude and longitude coordinates that are collected during each Ookla speed test, via the device's GPS. This allows us to evaluate actual median upload and download speeds at the county level, in each year of the five-year time period, for counties in which approximately $97 \%$ of the U.S. population live (not including the U.S. Territories). If a census block has 4G LTE coverage of at least $5 / 1 \mathrm{Mbps}$ based on the FCC Form 477 minimum advertised speeds, it is assigned the median upload and download speeds that are calculated for the county in which it is located, which allows us to evaluate the mobile broadband speeds for each census block within the United States.
${ }^{131}$ Wireless mobile speeds vary over even small local areas. Therefore, ascribing the median county Ookla speed to an entire county will sometimes overestimate or underestimate realized local speeds. Use of Ookla data alone would overestimate coverage, as counties with only partial coverage would be represented as having $100 \%$ coverage. Use of FCC Form 477 data alone would necessitate reliance on the $5 / 1 \mathrm{Mbps}$ reporting standard.
${ }^{132}$ The percentage of the population in our analysis is based on the total U.S. population, not including the U.S. Territories, for which we separately report our results. The Ookla speed data population in Figure $2 b$ is a subset of the total U.S. population evaluated in Figure 2a, and refers to the population in the counties for which we believe there are a statistically significant number of on-the-ground speed test observations. In 2019, for example, the U.S. population, not including the U.S. Territories, was 328.210 million, whereas in Figure 2b, we use 319.341 million as the basis for our 2019 calculations. The population evaluated figure, 319.341 million, is the population for the U.S., excluding the U.S. Territories and the population in the counties without a sufficient number of reliable on-theground speed test data observations.
${ }^{133}$ See 2020 Report, 35 FCC Rcd at 9000-01, paras. 32-33 (discussing use of FCC Form 477 combined with Ookla data to account for limitations in both data sets).
${ }^{134}$ See Connected Nation, Connect K-12 2020 Executive Summary ( 2020 Connect K-12 Report), https://connectk12.org/static/media/Connect_K12_2020_Executive_Summary_Full_Report.d84a960a.pdf (last visited Nov. 19, 2020). In the 2019 Report, the Commission evaluated information provided by the Consortium for School Networking (CoSN), specifically the CoSN's 2018-2019 Annual Infrastructure Report, a report published in January 2019. See 2019 Report, 34 FCC Rcd at 3887-88, para. 51. Because there is no subsequent CoSN report, we
previously published an annual State of the States Report. ${ }^{135}$ We have previously relied on EducationSuperHighway's annual State of the States Report, a report similar, but not identical to, the Connect K-12 Report. ${ }^{136}$ The 2020 Connect K-12 Report tracks and provides analysis of public schools' progress toward the Commission's long-term goal for K-12 connectivity using the Commission's Form 471 data and additional outreach efforts to E-Rate applicants for clarifications on their broadband purchases. ${ }^{137}$

## B. Broadband Deployment Estimates

32. In Figures 1 through 3 below, we compare deployment in the most recent year of data available to deployment in the previous four years. ${ }^{138}$ For purposes of this Report, we also report results for federally-recognized Tribal lands as identified in the 2010 Census. We aggregate federallyrecognized Tribal lands into four Tribal lands categories (the Lower 48 States, ${ }^{139}$ Tribal Statistical Areas, ${ }^{140}$ Alaskan Villages, ${ }^{141}$ and Hawaiian Home Lands) ${ }^{142}$ and report deployment for these four geographic categories separately and jointly. ${ }^{143}$

## 1. Deployment of Fixed Advanced Telecommunications Capability

33. Figure 1 shows the deployment of fixed terrestrial broadband at speeds of $25 / 3 \mathrm{Mbps}$, the Commission's current benchmark for fixed advanced telecommunications capability. ${ }^{144}$ As of year-end 2019 , approximately $96 \%$ of the overall population had coverage of such services, up from $94 \%$ in 2018. The data clearly demonstrate that the gap between urban areas on the one hand and rural and Tribal areas on the other, has narrowed each year over the last five years. Indeed, while the gap between urban and rural areas was 30 percentage points as of year-end 2016, it was only 16 percentage points as of year-end 2019. As of the end of 2019 , approximately $17 \%$ of Americans in rural areas and $21 \%$ of Americans in Tribal lands lack coverage from fixed terrestrial $25 / 3 \mathrm{Mbps}$ broadband, as compared to only $1 \%$ of
(Continued from previous page) do not rely on any CoSN Annual Infrastructure Report in this Report, just as the Commission did not in the 2020 Report. 2020 Report, 35 FCC Rcd at 9002, para. 34 \& n. 114.
${ }^{135}$ See 2020 Connect K-12 Report at 4.
${ }^{136}$ See, e.g., 2020 Report, 35 FCC Rcd at 8986, paras. 52-53; 2019 Report, 34 FCC Rcd at 3887, paras. 50-51.
${ }^{137}$ See 2020 Connect $K-12$ Report at 16; Connect K-12: Frequently Asked Questions, https://connectk12.org/faq (2020 Connect K-12 Report FAQ).
${ }^{138}$ Unless otherwise noted, the deployment percentage estimate for fixed terrestrial services and/or mobile services is the population in the census blocks with coverage for the service divided by the total population in the area being considered (e.g., United States, all rural areas, and all urban areas).
${ }^{139}$ These areas include: (1) Joint Use Areas; (2) legal, federally-recognized American Indian Area consisting of reservation and associated off-reservation trust land; (3) legal, federally-recognized American Indian Area consisting of reservation only; and (4) legal, federally-recognized American Indian Area consisting of offreservation trust land only.
${ }^{140}$ Tribal Statistical Areas are statistical American Indian Areas defined for a federally-recognized Tribe that does not have reservation or off-reservation trust land; specifically, a Tribal Designated Statistical Area (TDSA) or Oklahoma Tribal Statistical Area (OTSA).
${ }^{141}$ Alaskan Native Village Statistical Area.
${ }^{142}$ Hawaiian Home Lands were established by the Hawaiian Homes Commission Act of 1921.
${ }^{143}$ See infra Figs. 9 and 10.
${ }^{144}$ Unless stated otherwise, all references in this Report to data for the "United States," include the 50 States and the District of Columbia, but not the U.S. Territories. The estimates reported for years prior to 2019 may differ slightly from those reported in the 2020 Report and the 2018 Communications Marketplace Report because these estimates are based upon the most recent updates of the fixed broadband data previously released by the Commission.

## 2. Deployment of Mobile 4G LTE

34. Figure 2a shows that almost all of the American population lives in geographical areas covered by mobile 4G LTE with a minimum advertised speed of at least $5 / 1 \mathrm{Mbps}$. From 2015 to 2019, the percentage of Americans living in rural areas with coverage of 4 G LTE at $5 / 1 \mathrm{Mbps}$ increased from approximately $98 \%$ to $99 \%$. Figure 2b shows that between 2018 and 2019, the percentage of Americans living in the United States with mobile 4G LTE services coverage at median speeds of $10 / 3 \mathrm{Mbps}$ increased from approximately $94 \%$ to $97 \%$. In addition, gains have been made in rural areas, where coverage increased from approximately $80 \%$ to almost $91 \%$ between 2018 and 2019. ${ }^{146}$ And between 2017 and 2019, deployment of mobile 4G LTE services at median speeds of $10 / 3 \mathrm{Mbps}$ expanded to cover an additional 16.6 million Americans living in rural areas.

## 3. Deployment of Fixed Services and Mobile 4G LTE

35. Figure 3a shows deployment across all geographic areas for both fixed terrestrial $25 / 3$ Mbps services and $5 / 1 \mathrm{Mbps}$ mobile 4G LTE. ${ }^{148}$ Overall, as of year-end 2019, approximately 313.6 million Americans, or $96 \%$ of the population, are covered by both $25 / 3 \mathrm{Mbps}$ fixed terrestrial service and mobile 4 G LTE with a minimum advertised speed of $5 / 1 \mathrm{Mbps}$. In rural areas, approximately $82 \%$ of Americans are covered by both services, up from $78 \%$ in 2018. On Tribal lands, approximately $79 \%$ of Americans have coverage from both services, up from $72 \%$ in 2018. Figure 3b shows deployment of fixed terrestrial speeds of $25 / 3 \mathrm{Mbps}$ and mobile 4G LTE with median speed of $10 / 3 \mathrm{Mbps}$. As of December 31, 2019, approximately $94 \%$ of Americans live in geographic areas covered by both services, an increase of four percentage points since 2018. Further, these data indicate that, between 2018 and
county (and its associated census blocks) for which there is insufficient Ookla data. In addition, we do not report results for Tribal lands in Figures 2b, 3b, and 3d because we have concerns with the reliability of the Ookla data for these areas. Tribal areas not only typically have fewer speed tests, but there are also fewer of these areas relative to urban and rural areas. Thus, deployment estimates for Tribal areas are more sensitive to sample variance. The population figure reported in the bottom row of Figures 2b, 3b, and 3d is the population evaluated for the reported time period, and the percentage is the percentage of the U.S. population evaluated. Figures that include the availability of 4G LTE with a median speed of $10 / 3 \mathrm{Mbps}$ show less than $100 \%$ of the population evaluated due to the unavailability of such Ookla data in certain places. Thus, for example, the 319.341 million population evaluated figure for 2019 in Figure 2b represents approximately $97 \%$ of the overall population in the 50 U.S. states and the District of Columbia ( $319.341 / 328.210=0.97$ ). Regardless of our deployment estimates for mobile 4G LTE with a median speed of $10 / 3 \mathrm{Mbps}$, Americans residing in the counties without sufficient Ookla data to create a statistically significant county sample to be included in Figures 2b, 3b, and 3d, receive minimum advertised speeds of $5 / 1 \mathrm{Mbps}$, and likely receive mobile services with speeds higher than $5 / 1 \mathrm{Mbps}$.
[^12]2019, deployment increased from approximately $66 \%$ to over $77 \%$ for Americans living in rural areas.
36. Figure 3 c reports deployment of fixed terrestrial $25 / 3 \mathrm{Mbps}$ service or mobile 4G LTE with a minimum advertised speed of $5 / 1 \mathrm{Mbps}$, and shows that services have been deployed to $99.7 \%$ or more of Americans since 2015. Figure 3d shows that approximately $99 \%$ of the population in the evaluated areas are covered by either $25 / 3 \mathrm{Mbps}$ fixed terrestrial service or mobile 4G LTE with a median speed of at least $10 / 3 \mathrm{Mbps}$.

## 4. Additional Deployment Estimates

38. Figure 4 shows deployment of fixed terrestrial services at various speed tiers from yearend 2015 through 2019. ${ }^{150}$ As of December 2019, fixed terrestrial $50 / 5 \mathrm{Mbps}$ service is deployed to approximately $94 \%$ of the population, up from $93 \%$ in 2018. Between 2018 and 2019, the deployment of $100 / 10 \mathrm{Mbps}$ increased from approximately $91 \%$ to $92 \%$ of the population, and the deployment of $250 / 25$ Mbps also increased from approximately $86 \%$ to over $87 \%$ of the population. While deployment in rural areas and on Tribal lands lags behind deployment in urban areas at all five speed tiers, the data show year-over-year improvements for all speeds in these areas. For example, between 2018 and 2019, the deployment of $250 / 25 \mathrm{Mbps}$ increased from approximately $52 \%$ to almost $56 \%$ in rural areas, and from approximately $46 \%$ to almost $50 \%$ on Tribal lands.
[^13]Fig. 4
Deployment (Millions) of Fixed Terrestrial Services at Different Speed Tiers

[^14]
## C. Demographic Data

39. In Figures 5, 6, 7, and 8, we present demographic data with our deployment analysis. ${ }^{151}$ Figures 5 and 6 compare the available demographic data for Americans with and without coverage by fixed terrestrial $25 / 3 \mathrm{Mbps}$ service and mobile 4G LTE. Figure 5 presents this analysis for the United States (excluding U.S. Territories other than Puerto Rico) as a whole, urban and rural areas, and Tribal lands for fixed terrestrial $25 / 3 \mathrm{Mbps}$ service and mobile 4G LTE with a minimum advertised speed of $5 / 1$ Mbps in 2019. ${ }^{152}$ The data show that, generally, Americans living in areas where these services are deployed typically live in census block groups with lower poverty rates and with higher average populations, population densities, per capita incomes, and median household incomes than Americans living in areas without coverage by these services.

Fig. 5
Comparison of Demographic Data Between Areas With and Without Fixed Terrestrial 25/3 Mbps and Mobile 4G LTE with a Minimum Advertised Speed of $5 / 1$ Mbps (December 31, 2019)

measures are not available for the other U.S. Territories. Per capita income and median household income for 2018 are measured in 2018 Inflation-Adjusted Dollars. The household poverty rate is the proportion of households living below the poverty level. Population Density is the total population residing in the census block group as of 2019 divided by the square miles of land in the census block group, with the estimate of land area is based upon the 2010 Census.
${ }^{152}$ Demographic data are not available for U.S. Territories other than Puerto Rico. We provide state-by-state and county-by-county demographic deployment information (including for Puerto Rico) in Appendices D and E.
${ }^{153}$ Data exclude U.S. Territories other than Puerto Rico.

We test for a statistical difference in the reported means between areas with and without deployment of these services. The level of statistical significance is indicated by the number of stars. The absence of a star indicates no statistical difference between the reported figures. * signifies statistical significance at a $90 \%$ level of confidence, ${ }^{* *}$ signifies statistical significance at a $95 \%$ level of confidence, and ${ }^{* * *}$ signifies statistical significance at a $99 \%$ level of confidence.
40. Figure 6 compares the available demographic data across urban and rural areas for Americans in the 50 states and the District of Columbia with and without coverage by both fixed terrestrial $25 / 3 \mathrm{Mbps}$ service and mobile 4G LTE service with a median speed of $10 / 3 \mathrm{Mbps}$ in 2019. ${ }^{154}$ Like Figure 5, Figure 6 shows that Americans living in areas where these services are deployed typically live in census block groups where there are lower poverty rates, and where there are higher average populations, population densities, per capita incomes, and median household incomes than areas without such service deployment.

Fig. 6
Comparison of Demographic Data Between Areas With and Without Fixed Terrestrial 25/3 Mbps and Mobile 4G LTE with a Median Speed of $10 / 3$ Mbps (December 31, 2019)

| We test for a statistical difference in the reported means between areas with and without deployment of these services. The level of statistical significance is indicated by the number of stars. The absence of a star indicates no statistical difference between the reported figures. * signifies statistical significance at a $90 \%$ level of confidence, ${ }^{* *}$ signifies statistical significance at a $95 \%$ level of confidence, and $* * *$ signifies statistical significance at a $99 \%$ level of confidence. |  |  |  |  |  |

41. Figure 7 shows, for 2019 , how the average proportion of the population with coverage by fixed terrestrial $25 / 3 \mathrm{Mbps}$ service and mobile 4G LTE service with a minimum advertised speed of $5 / 1$ Mbps varies with median household income, population density, and poverty rate at the census block

[^15]group level. ${ }^{156}$ On average, deployment is highest in census block groups with the highest median household incomes, the highest population densities, and the lowest poverty rates.

## Fig. 7

Average Percentage of Population with Fixed Terrestrial 25/3 Mbps and Mobile 4G LTE with a Minimum Advertised Speed of 5/1 Mbps by Census Block Group Level Demographic Variables (December 31, 2019) ${ }^{157}$

|  | Fixed Terrestrial 25/3 Mbps | Mobile 4G LTE 5/3 Mbps | Both Fixed and Mobile 4G LTE |
| :---: | :---: | :---: | :---: |
| Median Household Income (\$2018) |  |  |  |
| First Quartile (Lowest Median Household Income) | 93.7\% | 99.7\% | 93.5\% |
| Second Quartile | 93.1\% | 99.8\% | 93.0\% |
| Third Quartile | 95.5\% | 99.9\% | 95.5\% |
| Fourth Quartile (Highest Median Household Income) | 98.5\% | 100.0\% | 98.5\% |
| Population Density |  |  |  |
| First Quartile (Lowest Pop. Density) | 83.5\% | 99.3\% | 83.2\% |
| Second Quartile | 98.2\% | 100.0\% | 98.2\% |
| Third Quartile | 99.2\% | 100.0\% | 99.2\% |
| Fourth Quartile (Highest Pop. Density) | 99.3\% | 100.0\% | 99.3\% |
| Household Poverty Rate |  |  |  |
| First Quartile (Lowest Household Poverty Rate) | 97.4\% | 99.9\% | 97.3\% |
| Second Quartile | 95.3\% | 99.9\% | 95.2\% |
| Third Quartile | 93.5\% | 99.8\% | 93.4\% |
| Fourth Quartile (Highest Household Poverty Rate) | 94.6\% | 99.7\% | 94.4\% |

42. Figure 8 depicts how the average proportion of the population with coverage by fixed terrestrial services by speed tier varies with median household income, population density, and household poverty rate at the census block group level. On average, deployment is highest in census blocks with the highest median household incomes, the highest population densities, and the lowest household poverty rates.

| Fourth Quartile (Highest Household Poverty Rate) | 97.4\% | 94.6\% | 93.2\% | 91.3\% | 85.6\% |

## D. Tribal Lands Data

43. In Figures 9 and 10, we present additional deployment estimates for Americans living on Tribal lands for each Tribal lands category. ${ }^{159}$ Figure 9 presents deployment on Tribal lands from 2015 to 2019 of fixed terrestrial $25 / 3 \mathrm{Mbps}$ services and mobile 4G LTE service with a speed of at least $5 / 1 \mathrm{Mbps}$. Overall, in 2019, approximately $79 \%$ of Tribal lands are covered by fixed terrestrial $25 / 3 \mathrm{Mbps}$ services and mobile 4G LTE with a speed of $5 / 1 \mathrm{Mbps}$, an increase from $72 \%$ in 2018 based on FCC Form 477 data. Deployment on rural Tribal lands continues to lag behind urban Tribal lands, with only approximately $65 \%$ of all Tribal lands in rural areas having deployment of both services, as compared to $95 \%$ of Tribal lands in urban areas. But this Tribal urban-rural divide is narrowing: the gap between the percentage of Americans living on urban Tribal lands and the percentage of Americans living on rural Tribal lands with access to $25 / 3 \mathrm{Mbps}$ fixed broadband and Mobile 4G LTE with a minimum advertised speed of $5 / 1 \mathrm{Mbp}$ has been nearly halved between 2015 and 2019, falling from more than 55 points to 30 points.

| Pop. Evaluated | 3.964 | $100.0 \%$ | 3.991 | $100.0 \%$ | 4.017 | $100.0 \%$ | 4.039 | $100.0 \%$ | 4.052 | $100.0 \%$ |

44. In Figure 10, we present deployment estimates for fixed terrestrial $25 / 3 \mathrm{Mbps}$ service and mobile 4G LTE service with a speed of at least $5 / 1 \mathrm{Mbps}$ on Tribal lands. As of December 31, 2019, fixed terrestrial $25 / 3 \mathrm{Mbps}$ services was deployed to over $79 \%$ of Americans on Tribal lands, almost $98 \%$ were covered by mobile 4G LTE at speeds of at least $5 / 1 \mathrm{Mbps}$, and almost $79 \%$ were covered by both services. The figures show variability in deployment across the Tribal lands categories, with the least deployment in Alaskan Villages.

## E. Adoption Data

45. Our assessment of adoption from 2015-2019 is based upon FCC Form 477 subscriber data that is collected at the census tract level and FCC Form 477 deployment data that is collected at the census block level. For this analysis, we aggregate data up to the geographic level reported in Figures 11 and 12, e.g., the United States, the tract level, or the county. We evaluate the adoption of fixed terrestrial services at speeds of $10 / 1 \mathrm{Mbps}, 25 / 3 \mathrm{Mbps}, 50 / 5 \mathrm{Mbps}, 100 / 10 \mathrm{Mbps}$, and $250 / 25 \mathrm{Mbps}$. The reported adoption rates are the number of residential subscriptions divided by the number of households in the area where the FCC Form 477 deployment data indicate that fixed terrestrial services of at least the designated speed are deployed.
46. Figure 11 reports adoption rates based upon year-end data from 2015 to 2019 for the United States as a whole (excluding the U.S. Territories), ${ }^{160}$ urban and non-urban core areas, ${ }^{161}$ and Tribal lands. Figure 11 shows year-to-year increases in the adoption of broadband services across the vast majority of areas, including Tribal lands.
[^18]Fig. 11
Overall Adoption Rate for Fixed Terrestrial Services at Different Speed Tiers

|  | 2015 | 2016 | 2017 | 2018 | 2019 |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 10/1 Mbps |  |  |  |  |  |
| United States ${ }^{162}$ | 62.2\% | 66.3\% | 69.7\% | 73.3\% | 77.0\% |
| Non-Urban Core Areas | 55.8\% | 60.3\% | 63.5\% | 67.4\% | 71.8\% |
| Urban Core Areas | 67.0\% | 71.0\% | 74.7\% | 78.1\% | 81.4\% |
| Tribal Lands | 42.4\% | 43.1\% | 46.3\% | 51.2\% | 55.5\% |
| Non-Urban Core Areas | 36.1\% | 36.9\% | 40.4\% | 45.3\% | 50.1\% |
| Urban Core Areas | 56.8\% | 59.1\% | 62.3\% | 68.1\% | 71.1\% |
| 25/3 Mbps |  |  |  |  |  |
| United States | 48.1\% | 53.5\% | 60.2\% | 65.1\% | 69.4\% |
| Non-Urban Core Areas | 43.2\% | 48.9\% | 55.1\% | 59.9\% | 64.5\% |
| Urban Core Areas | 51.5\% | 56.9\% | 64.0\% | 69.2\% | 73.3\% |
| Tribal Lands | 31.7\% | 33.4\% | 37.9\% | 44.0\% | 46.5\% |
| Non-Urban Core Areas | 28.5\% | 30.3\% | 34.5\% | 38.7\% | 40.6\% |
| Urban Core Areas | 37.1\% | 39.4\% | 45.1\% | 56.1\% | 61.8\% |
| 50/5 Mbps |  |  |  |  |  |
| United States | 33.9\% | 44.4\% | 54.8\% | 60.6\% | 64.8\% |
| Non-Urban Core Areas | 27.8\% | 41.2\% | 50.8\% | 56.4\% | 60.9\% |
| Urban Core Areas | 38.0\% | 46.7\% | 57.7\% | 63.8\% | 67.7\% |
| Tribal Lands | 25.0\% | 28.9\% | 34.2\% | 37.8\% | 42.4\% |
| Non-Urban Core Areas | 20.4\% | 25.3\% | 30.9\% | 34.0\% | 38.7\% |
| Urban Core Areas | 32.0\% | 34.9\% | 40.5\% | 45.6\% | 50.3\% |
| 100/10 Mbps |  |  |  |  |  |
| United States | 16.7\% | 19.2\% | 29.6\% | 45.7\% | 50.9\% |
| Non-Urban Core Areas | 16.4\% | 17.9\% | 27.0\% | 44.3\% | 50.0\% |
| Urban Core Areas | 16.9\% | 20.0\% | 31.4\% | 46.6\% | 51.5\% |
| Tribal Lands | 7.4\% | 10.5\% | 18.3\% | 30.2\% | 36.2\% |
| Non-Urban Core Areas | 6.4\% | 9.8\% | 17.0\% | 26.4\% | 33.1\% |
| Urban Core Areas | 8.7\% | 11.6\% | 20.4\% | 37.3\% | 42.5\% |
| 250/25 Mbps |  |  |  |  |  |
| United States | 4.2\% | 1.8\% | 4.1\% | 5.5\% | 9.1\% |
| Non-Urban Core Areas | 6.7\% | 2.3\% | 4.1\% | 5.0\% | 8.3\% |
| Urban Core Areas | 3.1\% | 1.6\% | 4.1\% | 5.8\% | 9.7\% |
| Tribal Lands | 1.4\% | 1.8\% | 4.4\% | 7.5\% | 11.5\% |
| Non-Urban Core Areas | 1.7\% | 2.1\% | 4.5\% | 8.0\% | 11.8\% |
| Urban Core Areas | 0.2\% | 1.5\% | 4.3\% | 6.7\% | 11.0\% |

47. Figure 12 reports average county-level adoption rates for fixed terrestrial services against the quartile ranking for median household income, population density, the poverty rate, and the proportion of the population that resides in a rural area. ${ }^{163}$ The data are further disaggregated by speed

[^19]tier. ${ }^{164}$ In general, these data suggest that the average household adoption rate in a county increases with median household income and population density, and decreases with increases in the poverty rate and rural population rate. ${ }^{165}$

Fig. 12

## Average County Overall Adoption Rate for Fixed Terrestrial Services by County Level Demographic Variable (December 31, 2019) ${ }^{166}$

|  | 10/1 Mbps | 25/3 Mbps | 50/5 Mbps | 100/10 <br> Mbps | $250 / 25$ <br> Mbps |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Median Household Income |  |  |  |  |  |
| First Quartile (Lowest Median Household Income) | 38.4\% | 28.3\% | 23.4\% | 20.2\% | 4.7\% |
| Second Quartile | 51.6\% | 41.6\% | 36.4\% | 31.0\% | 6.0\% |
| Third Quartile | 58.8\% | 47.6\% | 42.2\% | 35.2\% | 6.2\% |
| Fourth Quartile (Highest Median Household Income) | 71.2\% | 61.3\% | 56.7\% | 43.8\% | 8.1\% |
| Population Density |  |  |  |  |  |
| First Quartile (Lowest Population Density) | 48.8\% | 34.2\% | 26.8\% | 22.7\% | 8.0\% |
| Second Quartile | 43.9\% | 34.3\% | 30.1\% | 25.0\% | 4.8\% |
| Third Quartile | 55.1\% | 46.5\% | 42.6\% | 36.0\% | 5.0\% |
| Fourth Quartile (Highest Population Density) | 72.0\% | 63.6\% | 58.8\% | 46.1\% | 7.8\% |
| Household Poverty Rate |  |  |  |  |  |

(Continued from previous page)
for the states, District of Columbia, and Puerto Rico (income measures are not available for the other U.S.
Territories). Median household income is based on 2018 data and is measured in 2018 Inflation-Adjusted Dollars.
The household poverty rate is the proportion of households living below the poverty level. The ACS Five-Year Estimates for 2015-2019 will not be released until December 10, 2020. U.S. Census, 2019 Data Release Schedule (Mar. 3, 2020), https://www.census.gov/programs-surveys/acs/news/data-releases/2019/release-schedule.html. Population Density is the total population residing in the county as of 2019 divided by the square miles of land in the county, where the estimate of land area is based upon the 2010 Census. The proportion of the population residing in a rural area is the total population residing in the county rural census block (based on the 2010 Census) divided by the total population in the county. A rural census block encompasses all population, housing, and territory not identified as an urban census block in the 2010 Census.
${ }^{164}$ We note that this analysis is based upon the best data currently available and may not accurately reflect how adoption may be associated with the subscriber's demographic data. Our data is based upon the subscriber data submitted by the providers, and we do not know the demographics of the providers' fixed broadband subscribers.
${ }^{165}$ The adoption of fixed terrestrial broadband varies across demographic groups, and households with less income are less likely to subscribe to a fixed broadband service for their home. See, Pew Research Center, Internet/Broadband Fact Sheet (June 12, 2019), https://www.pewresearch.org/internet/fact-sheet/internet-broadband/\#who-has-home-broadband. Incomes tend to be lower in rural areas, and subscription to home broadband services is generally lower in rural areas. See, Michael J.R. Martin, Rural and Lower-Income Counties Lag Nation in Internet Subscription (Dec. 13, 2018), https://www.census.gov/library/stories/2018/12/rural-and-lower-income-counties-lag-nation-internet-subscription.html. Counties with a higher proportion of rural population will tend to have lower population density because fewer people live in these counties than in counties with more urban areas. In Figure 12, the quartile with the lowest population density will likely correspond to the quartile with the highest rural population rate. Thus, the observation that the average overall adoption rate for fixed terrestrial services increases with population density is akin to the observation that the average overall adoption rate for fixed terrestrial services decreases as the rural population rate increases.
${ }^{166}$ All data presented for the United States in Figure 12 exclude U.S. Territories other than Puerto Rico.

|  | 10/1 Mbps | 25/3 Mbps | 50/5 Mbps | 100/10 <br> Mbps | $\begin{aligned} & \hline 250 / 25 \\ & \text { Mbps } \\ & \hline \end{aligned}$ |
| :---: | :---: | :---: | :---: | :---: | :---: |
| First Quartile (Lowest Household Poverty Rate) | 67.2\% | 55.9\% | 50.9\% | 39.8\% | 7.6\% |
| Second Quartile | 59.4\% | 48.7\% | 43.4\% | 36.0\% | 6.7\% |
| Third Quartile | 52.7\% | 43.1\% | 38.5\% | 33.1\% | 6.5\% |
| Fourth Quartile (Highest Household Poverty Rate) | 40.7\% | 31.1\% | 26.0\% | 21.5\% | 4.3\% |
| Rural Population Rate |  |  |  |  |  |
| First Quartile (Lowest Rural Population Rate) | 71.0\% | 62.3\% | 57.3\% | 44.9\% | 8.0\% |
| Second Quartile | 57.4\% | 47.8\% | 43.0\% | 36.1\% | 5.7\% |
| Third Quartile | 46.8\% | 37.0\% | 32.7\% | 27.7\% | 5.0\% |
| Fourth Quartile (Highest Rural Population Rate) | 44.6\% | 31.5\% | 25.2\% | 21.0\% | 6.5\% |

## F. Schools and Classrooms Data

48. We continue the Commission's practice of measuring availability of advanced telecommunications capability in "elementary and secondary schools and classrooms" ${ }^{167}$ using our longterm goal for broadband connectivity to schools of 1 Gbps per 1,000 students and staff, respectively. ${ }^{168}$ According to the 2020 Connect K-12 Report, the most recent comprehensive data available, $47 \%$ of school districts currently meet the goal, which is up from $38 \%$ in $2019 .{ }^{169}$ Connected Nation also finds that $35 \%$ of the nation's 1,000 largest school districts and $78 \%$ of the nation's 1,000 smallest school districts meet the long-term goal. ${ }^{170}$

## V. COMMISSION EFFORTS TO CLOSE THE DIGITAL DIVIDE

49. Since the 2020 Report, the Commission has continued its efforts to encourage fixed and mobile providers to accelerate deployment of advanced telecommunications ability and close the digital divide. These efforts include taking action to remove barriers to wireline and wireless infrastructure investment, modernizing our universal service programs, and making more spectrum available for the commercial marketplace. In addition, the Commission has responded to the challenges posed to consumers and providers by the current COVID-19 pandemic, both by leveraging existing funding programs and standing up a new program to distribute funds allocated by Congress. As we discuss in detail below, much of our work remains ongoing, as we continue to work towards ensuring that all Americans, including those in rural areas, Tribal lands, and disaster-affected areas, have the benefits of high-speed broadband.

## A. Removing Barriers to and Encouraging Broadband Investment

50. Broadband Infrastructure Reforms. In June 2020, the Commission issued a Declaratory Ruling clarifying its rules implementing section 6409(a) of the Spectrum Act and a Notice of Proposed
[^20]Rulemaking that sought comment on certain aspects of those rules. ${ }^{171}$ The Commission sought to balance the need for wireless providers to have clear rules when they upgrade existing infrastructure with the need for state and local governments to enforce legitimate zoning requirements. ${ }^{172}$ Specifically, the declaratory ruling clarified: (1) when the shot clock for an eligible facilities request commences, (2) what constitutes a "substantial change" in the physical dimensions of wireless infrastructure, and (3) the extent to which certain elements of a proposed modification to existing infrastructure affect the eligibility of that proposed modification for streamlined state or local government review. ${ }^{173}$ The declaratory ruling also clarified that an environmental assessment is not required when the Commission and applicants proposing to build communications facilities have entered into a memorandum of agreement to mitigate effects on historic properties. ${ }^{174}$ The Section 6409 Notice of Proposed Rulemaking sought comment on rule changes to better define the boundaries within which an applicant can excavate or deploy when making a modification under section 6409(a). ${ }^{175}$
51. On July 10, 2020, the Commission, the Advisory Council on Historic Preservation (ACHP), and the National Conference of State Historic Preservation Officers executed the Second Amendment to the Nationwide Programmatic Agreement for the Collocation of Wireless Antennas (Collocation NPA). ${ }^{176}$ The amendment facilitates the collocation of wireless facilities on existing towers by eliminating review under section 106 of the National Historic Preservation Act ${ }^{177}$ for certain collocations that involve a limited expansion beyond the boundaries of a tower site. ${ }^{178}$
52. The Commission has taken further actions to reduce barriers to deployment of advanced communications capability relating to access to poles. On July 29, 2020, the Wireline Competition Bureau clarified that the imposition of a "blanket ban" by a utility on attachments to any portion of a utility pole is inconsistent with the federal requirement that a "denial of access . . . be specific" to a particular request. ${ }^{179}$ The Bureau also clarified that, while utilities and attachers have the flexibility to negotiate terms in their pole attachment agreements that differ from the requirements in the Commission's rules, a utility cannot use its significant negotiating leverage to require an attacher to give up rights to

[^21]which the attacher is entitled under the rules without the attacher obtaining a corresponding benefit. ${ }^{180}$
53. In October 2020, the Commission adopted a Report and Order that further streamlined the section 6409(a) approval process for state and local governments' review of wireless communication collocations and tower modifications that involve limited ground excavation or deployment of transmission equipment. ${ }^{181}$ The Report and Order revised the definition of "substantial change" to provide that the modification of an existing tower outside the public rights-of-way that entails ground excavation or deployment of transmission equipment up to 30 feet in any direction outside the boundaries of a site will be eligible for streamlined processing under section 6409(a). ${ }^{182}$ The Report and Order also revised the definition of a "site" in a manner that will ensure that the site boundaries from which limited expansion is measured appropriately reflect prior state or local government review and approval. ${ }^{183}$
54. In November 2020, the Wireline Competition Bureau preempted legal requirements imposed by several cities in Missouri to the extent they permit "duplicative rights-of-way fees based solely on passive ownership of facilities used to provide telecommunications services." ${ }^{184}$ Under section 253 (d), the Commission is required by Congress to preempt any requirements that effectively prohibit an entity from providing telecommunication services. ${ }^{185}$ In the Bluebird Declaratory Ruling, the Bureau found that the cities' legal requirements could increase Bluebird's right-of-way costs by $100 \%$, and that the record showed that such a cost increase would "effectively prohibit[] Bluebird from providing its services in violation of section 253(a)." ${ }^{186}$
55. Restoring Internet Freedom. In the Restoring Internet Freedom Order, the Commission ended heavy-handed, utility-style Title II regulation of the Internet and returned broadband Internet access service to its long-standing classification as an information service under Title I, the light-touch framework under which the Internet developed and flourished. ${ }^{187}$ On October 1, 2019, in Mozilla Corp. v. $F C C$, the D.C. Circuit upheld the vast majority of the Restoring Internet Freedom Order, remanding three discrete issues for further consideration-namely, the effect of that Order on: (1) public safety; (2) the regulation of pole attachments; and (3) universal service support for low-income consumers through the Lifeline program. ${ }^{188}$ On October 27, 2020, the Commission adopted an order addressing the court's limited remand.
56. In the Restoring Internet Freedom Remand Order, the Commission considered the three

[^22]${ }^{182}$ Section 6409 Report and Order at 13192, 13296, paras. 9, 17; 47 CFR § 1.6100(b)(7) ("A modification substantially changes the physical dimensions of an eligible support structure if it meets any of the following criteria: . . . (iv) It entails any excavation or deployment outside the current site . . . .").
${ }^{183}$ Section 6409 Report and Order, 35 FCC Rcd at 13200-01, paras. 25-28; 47 CFR § 1.6100(b)(6) (defining "site").
${ }^{184}$ Missouri Network Alliance, LLC d/b/a Bluebird Network and Uniti Leasing MW LLC; Petition for Preemption and Declaratory Ruling, WC Docket No. 20-46, Declaratory Ruling, 35 FCC Rcd 12811, at 12811, para. 1 (WCB 2020) (Bluebird Declaratory Ruling).

18547 U.S.C. § 253(a), (d).
${ }^{186}$ Bluebird Declaratory Ruling, 35 FCC Rcd at 12812, para. 2.
${ }^{187}$ Restoring Internet Freedom, WC Docket Nos. 17-108, 17-287, and 11-42, Declaratory Ruling, Report and Order, and Order, 33 FCC Rcd 311 (2017) (Restoring Internet Freedom Order).
${ }^{188}$ Restoring Internet Freedom; Bridging the Digital Divide for Low-Income Consumers; Lifeline and Link Up Reform and Modernization, WC Docket Nos. 17-108, 17-287 \& 11-42, Order, 35 FCC Rcd 12328, 12329, para. 2 (2020) (Restoring Internet Freedom Remand Order); see Mozilla Corp. v. FCC, 940 F.3d 1 (D.C. Cir. 2019) (Mozilla); see also Restoring Internet Freedom Order, 33 FCC Rcd 311.
issues remanded by the court and found no reason to depart from its earlier conclusions. ${ }^{189}$ First, the Commission found that neither its decision to return broadband Internet access service to its longstanding classification as an information service, nor its subsequent decision to eliminate the conductbased open Internet rules, is likely to adversely impact public safety. ${ }^{190}$ To the contrary, the Commission concluded that the regulatory certainty of the Restoring Internet Freedom Order has promoted an environment that encourages robust investment in broadband networks and facilities that can be used for many purposes, including public safety purposes. ${ }^{191}$ Second, the Commission concluded that the overall benefits of classifying broadband Internet access service as an information service outweigh the limited potential negative effects resulting from the loss of section 224 rights, and, by extension, the Commission's pole attachment rules, for broadband-only ISPs. ${ }^{192}$ The Commission considered the drawbacks to be limited in part because the vast majority of ISPs also provide either cable or telecommunications services over their networks, and therefore remain able to take advantage of the rights guaranteed by section 224 notwithstanding the reclassification of broadband Internet access service as an information service. ${ }^{193}$ Finally, the Commission concluded it has legal authority under section 254(e) of the Act to provide Lifeline support to Eligible Telecommunications Carriers that provide broadband service over broadband-capable networks that support voice service. ${ }^{194}$ The Restoring Internet Freedom Remand Order provided valuable certainty to policies that have fueled broadband deployment and are closing the digital divide. ${ }^{195}$
57. Unbundled Network Elements. Incumbent LECs filed a petition in May 2018 seeking forbearance from obligations to share their networks and retail telecommunications services on an avoided-cost wholesale basis with competitors. ${ }^{196}$ These unbundling and resale obligations were established in the Telecommunications Act of 1996 to encourage competition within the local telecommunications marketplace. ${ }^{197}$ Where competition has flourished, Congress "encouraged the Commission to use forbearance and other means to encourage deployment of advanced telecommunications capability and remove barriers to infrastructure deployment." ${ }^{198}$
58. In response to the May 2018 petition, the Commission granted price cap incumbent LECs unbundling relief for DS1 and DS3 interoffice transport ${ }^{199}$ and for analog loops used solely to provide legacy telephone service, specifically Time Division Multiplexing service provided over narrowband

[^23]copper wires ${ }^{200}$ as well as resale obligations typically used to provide the same legacy service. The Commission later sought comment on broader reforms. ${ }^{201}$ In October 2020, the Commission adopted an Order eliminating unbundling requirements and resale obligations in areas where they stifle technology transitions but preserving them in areas where they are still needed to promote competition. ${ }^{202}$
59. The 2020 UNE Order eliminated unbundling requirements for: enterprise DS1 and DS3 loops in areas with sufficient competition; DS0 loops and sub-loops in densely populated areas; voicegrade narrowband loops, multiunit premise subloops, and network interface devices nationwide; and dark fiber transport within one-half mile of competitive fiber networks. ${ }^{203}$ Each element has an appropriate transition period to avoid harming consumers and stranding investment. In addition, the Order forbore from the avoided-cost resale obligation where it continues to exist. ${ }^{204}$
60. Broadband Deployment Advisory Committee. The Chairman re-chartered the BDAC, a federal advisory committee, for a second two-year term effective March 1, 2019.205 The BDAC works to craft recommendations for the Commission on ways to accelerate the deployment of broadband by reducing and removing regulatory barriers to infrastructure investment and strengthening existing broadband networks in communities across the country. It serves as a forum for interested stakeholders to exchange ideas and develop recommendations to the Commission on broadband deployment, which in turn enhances the Commission's ability to carry out its statutory responsibility to encourage the deployment of broadband to all Americans. ${ }^{206}$
61. The re-chartered BDAC is organized into three working groups, each with a distinct purpose. The Disaster Response and Recovery Working Group was originally charged with recommending measures to improve resiliency of broadband infrastructure before a disaster occurs, and strategies that can be used during and after the response to a disaster to minimize broadband network downtime. ${ }^{207}$ On March 27, 2020, the Disaster Response and Recovery Working Group presented a report and recommendations in response to its charges, which the BDAC approved. ${ }^{208}$ It has since been charged, on April 16, 2020, with assisting the BDAC in documenting the strategies and solutions that stakeholders are developing and implementing in real time to address the deployment-related challenges presented by the COVID-19 pandemic. ${ }^{209}$ The Broadband Infrastructure Deployment Job Skills and

[^24]Training Opportunities Working Group is charged with making recommendations on ways to make job skills training more widely available and to improve development opportunities for the broadband infrastructure deployment workforce. ${ }^{210}$ The Increasing Broadband Investment in Low-Income Communities Working Group is tasked with identifying new ways to encourage the deployment of highspeed broadband infrastructure and services to low-income communities. ${ }^{211}$
62. The BDAC has worked diligently to fulfill the charges given to it by the Commission. The re-chartered BDAC has met three times in 2020, during which the BDAC members have discussed their charges and the progress the working groups have made toward developing final reports for consideration and approval by the full BDAC. ${ }^{212}$ At its October 29, 2020 meeting, the BDAC considered and voted on reports and recommendations from its three working groups: Increasing Broadband Investment in Low-Income Communities (Low-Income), Broadband Infrastructure Deployment Job Skills and Training Opportunities (Job Skills), and Disaster Response and Recovery (Disaster Response). The Job Skills working group and Disaster Response working group reports were considered and approved by the full BDAC, while the Low-Income working group report was considered but not voted on or approved, pending further revisions. ${ }^{213}$
63. Precision Agriculture Connectivity Task Force. Consistent with the Agriculture Improvement Act of 2018, ${ }^{214}$ Chairman Pai chartered the Task Force for Reviewing the Connectivity and Technology Needs of Precision Agriculture in the United States under the Federal Advisory Committee Act for a two-year term to make policy recommendations on how to accelerate broadband deployment on agricultural lands. ${ }^{215}$ The Precision Agriculture Task Force is examining policy, regulatory, and technical solutions to encourage the adoption of broadband on farms and ranches and to promote the advancement

[^25]of precision agriculture in the United States. ${ }^{216}$
64. In November 2019, Chairman Pai, in consultation with the Secretary of Agriculture, appointed fifteen members of the Task Force, including agricultural producers representing diverse geographic regions and farm sizes, equipment manufacturers, and industry representatives, as well as Tribal, state, and local government representatives. ${ }^{217}$ The Precision Agriculture Task Force met four times in 2020. ${ }^{218}$ Four working groups continue to assist the Task Force in carrying out its work: (1) Mapping and Analyzing Connectivity on Agricultural Lands; (2) Examining Current and Future Connectivity Demand for Precision Agriculture; (3) Encouraging Adoption of Precision Agriculture and Availability of High-Quality Jobs on Connected Farms; and (4) Accelerating Broadband Deployment on Unserved Agricultural Lands. ${ }^{219}$ At its October 28, 2020 meeting, the Task Force considered and voted on reports from its Mapping and Analyzing Connectivity on Agricultural Lands and Examining Current and Future Connectivity Demand for Precision Agriculture working groups, which were approved by the full Task Force. The Task Force also considered and approved an initial report from the Encouraging Adoption of Precision Agriculture and Availability of High-Quality Jobs on Connected Farms working group. ${ }^{220}$

## B. Universal Service Support

65. Universal service also plays an essential role in deploying broadband networks, particularly in rural, insular, and hard-to-serve areas. The Commission's Universal Service Fund provides funding to increase the availability of telecommunication services and broadband Internet access services for low-income households, rural health care providers, schools and libraries, and consumers in high-cost areas. ${ }^{221}$ As part of its oversight responsibilities, the Commission routinely considers ways to maximize the effect of available Universal Service Fund funding to support broadband deployment. ${ }^{222}$

[^26]66. High-Cost Support Reform. By both expanding the use of auctions and improving current programs, the Commission has continued its efforts to reform the manner in which universal service high-cost support is distributed to deploy broadband to rural areas. The Commission has successfully conducted the Connect America Fund Phase II auction to award funding to service providers that commit to offer voice and broadband services to fixed locations in unserved high-cost areas. In 2018, the Phase II auction awarded more than $\$ 1.488$ billion over 10 years to 103 winning bidders to serve more than 713,000 rural homes and businesses. ${ }^{223}$ The Commission began authorizing Phase II Auction funding in May 2019, ${ }^{224}$ authorizing a total of 16 waves of support through November 12, 2020, a process that continues. ${ }^{225}$ As of November 12, 2020, the Commission has authorized a total of nearly $\$ 1.5$ billion in Phase II auction funding, which is expanding connectivity to nearly 703,000 homes and small businesses nationwide. ${ }^{226}$ Funding rounds will continue until the authorization process is complete.
67. In January 2020, the Commission established the Rural Digital Opportunity Fund, which will provide up to $\$ 20.4$ billion in two phases to expand broadband in unserved rural areas, representing the Commission's biggest single step to date toward closing the rural digital divide. ${ }^{227}$ Phase I of the Rural Digital Opportunity Fund will allocate up to $\$ 16$ billion in funding over the next decade, targeting areas that current data show are wholly unserved by $25 / 3 \mathrm{Mbps}$ broadband and voice, where Commission staff estimate as many as 10.25 million unserved Americans live and work. ${ }^{228}$ On October 13, 2020, the Commission announced that 386 applicants were qualified to bid. ${ }^{229}$ The Phase I auction began on October 29, 2020, using a multi-round, reverse auction that favors bids offering faster services with lower latency and encourages intermodal competition to ensure that the greatest possible number of Americans will be connected to the best possible networks, all at a competitive cost. ${ }^{230}$ Phase II of the Rural Digital Opportunity Fund will incorporate the granular, precise broadband availability maps being developed in the Commission's Digital Opportunity Data Collection proceeding to allocate at least $\$ 4.4$ billion to
(Continued from previous page)
million to prevent pro-rata funding reductions that could have disproportionately affected rural health care providers, especially those in Alaska).
${ }^{223}$ Connect America Fund Phase II Auction Scheduled for July 24, 2018 Notice and Filing Requirements and Other Procedures for Auction 903, AU Docket No. 17-182, WC Docket No. 10-90, Public Notice, 33 FCC Rcd 1428 (2018); 220 Applicants Qualified to Bid in the Connect America Fund Phase II Auction (Auction 903); Bidding to Begin on July 24, 2018, AU Docket No. 17-182, WC Docket No. 10-90, Public Notice, 33 FCC Rcd 6171 (2018) (announcing the qualified bidders for the auction and confirming timing); Connect America Fund Phase II Auction (Auction 903) Closes; Winning Bidders Announced, AU Docket No. 17-182, WC Docket No. 10-90, Public Notice, 33 FCC Rcd 8257 (2018).

${ }^{230}$ Rural Digital Opportunity Fund Order, 35 FCC Rcd at 688, 694-95, paras. 5, 17-18; Press Release, FCC, FCC Announces Kickoff of Groundbreaking $\$ 16$ Billion Rural Digital Opportunity Fund Phase I Auction (Oct. 29, 2020), https://docs.fcc.gov/public/attachments/DOC-367851A1.pdf.
target unserved locations within partially served areas, as well as any areas not won in Phase I. ${ }^{231}$ The Commission also took steps in the Rural Digital Opportunity Fund Order to directly target broadband deployment in census blocks on rural Tribal lands. Specifically, the Commission adopted rules effectively increasing the auction reserve price for census blocks on Tribal lands, which makes more support available compared to most non-Tribal census blocks eligible for the auction, and makes additional locations on Tribal lands eligible for the auction. ${ }^{232}$
68. In September 2019, the Commission approved nearly $\$ 950$ million in Stage 2 funding for the Uniendo a Puerto Rico and Connect USVI Funds to improve, expand, and harden communications networks in Puerto Rico and the U.S. Virgin Islands that were damaged and destroyed during the 2017 hurricane season. ${ }^{233}$ To that end, the Commission allocated more than $\$ 500$ million over 10 years for fixed broadband support in Puerto Rico, ${ }^{234}$ and more than $\$ 180$ million over 10 years in support for fixed networks in the U.S. Virgin Islands. ${ }^{235}$ The Commission is awarding support for fixed broadband through a competitive process in which service providers bid to serve every location in each covered area with storm-hardened networks at up to gigabit speeds. ${ }^{236}$
69. On November 2 and November 16, 2020, the Commission announced the results of the competitive bidding process for the Uniendo a Puerto Rico Stage 2 fixed support and the Connect USVI Stage 2 fixed support. ${ }^{237}$ As a result, all of the more than 1.2 million eligible locations in Puerto Rico will get access to at least $100 / 10 \mathrm{Mbps}$ broadband, and nearly a third will gain access to gigabit speeds. ${ }^{238}$ In the U.S. Virgin Islands, broadband at gigabit speeds will be available to all of the more than 46,000 eligible locations. ${ }^{239}$ Further, as part of its efforts to promote robust voice and broadband in the territories, the Commission authorized $\$ 258.8$ million to expand, improve, and harden mobile broadband networks in Puerto Rico and U.S. Virgin Islands-including the first universal service funding targeted specifically for 5G deployment. ${ }^{240}$
70. The Commission has also continued its work to ensure universal access to mobile services. In April 2020, the Commission adopted a notice of proposed rulemaking proposing to establish a "5G Fund for Rural America" to retarget universal service funding for mobile broadband and voice in

[^27]high cost areas and support deployment of advanced networks in rural areas. ${ }^{241}$ And in October 2020, the Commission adopted a Report and Order establishing the 5G Fund rules that will use a multi-round reverse auction to distribute a total of $\$ 9$ billion through the Universal Service Fund across rural America for voice and 5 G wireless broadband connectivity. ${ }^{242}$ Phase I of the auction will make $\$ 8$ billion available to support 5 G deployment in rural areas that are unlikely to see unsubsidized deployment of 5G-capable networks, ${ }^{243}$ while Phase II will make at least $\$ 1$ billion available to facilitate connected precision agriculture technologies in high cost and hard to serve areas. ${ }^{244}$ The $5 G$ Fund Report and Order will also make $\$ 680$ million of Phase I funds available to support networks serving eligible areas in Tribal lands. ${ }^{245}$ Furthermore, the 5G Fund Report and Order adopted a framework to determine which areas will be eligible for 5G Fund support through improved mobile broadband coverage data that will be gathered through the Commission's Digital Opportunity Data Collection proceeding and adopted an adjustment factor to ensure that sufficient support will be available to the hardest-to-serve areas such as those with rugged terrain or sparse populations. ${ }^{246}$
71. Connected Care Pilot Program. On March 31, 2020, the Commission adopted a Report and Order establishing a three-year, up to $\$ 100$ million Connected Care Pilot Program to help defray the cost of bringing telehealth services directly to patients, with a primary emphasis on low-income patients and veterans. ${ }^{247}$ Eligible health care providers selected to participate in the Pilot Program will receive an $85 \%$ discount on qualifying broadband connectivity for broadband-enabled telehealth services that connect patients directly to their health care providers, as well as other information services used to provide connected care services and certain network equipment. ${ }^{248}$ Data gathered through the Pilot Program will be used to analyze how Universal Service Fund funds can support health care provider and patient use of connected care services and the possible benefits that support of broadband service for connected care may bring. ${ }^{249}$ On September 3, 2020, the Wireline Competition Bureau released a Public Notice providing guidance to assist prospective applicants in preparing to apply for the Pilot Program, including information about eligible funding, eligible health care providers, requesting an eligibility determination before filing an FCC Form 460, and information required on applications. ${ }^{250}$ The application filing window for the Pilot Program is open from November 5 to December 7, 2020. ${ }^{251}$
72. Rural Telehealth Initiative. In August 2020, the Commission, the U.S. Department of Health and Human Services, and the U.S. Department of Agriculture signed a Memorandum of Understanding to work together on the Rural Telehealth Initiative, a joint effort to collaborate and share

[^28]information to address health disparities, resolve service provider challenges, and promote broadband services and technology to rural areas in America. ${ }^{252}$ The agencies have started a cross-cutting, multiDepartment Rural Task Force to look across the relevant Administration programs and provide a path forward for health care in rural America, recognizing particular needs in technology, infrastructure, and regulatory flexibility to provide health care tailored to these communities' needs. ${ }^{253}$ This Task Force will regularly meet to consider future recommendations or guidelines for this effort and exchange agency expertise, scientific and technical information, data, and publications.
73. Rural Health Care Program. On October 19, 2020, the Wireline Competition Bureau released an Order waiving the budget cap for certain upfront and multi-year payments in the Rural Health Care Program's Healthcare Connect Fund in order to use already available money to fully fund all eligible services requested in Funding Year 2020. ${ }^{254}$ As a result, more than $\$ 800$ million is available in the current funding year to fund the connectivity needs of rural health care providers, more than double the available funding when the Commission first increased the budget cap in 2018.
74. Improving Broadband Deployment Data. Since the 2020 Broadband Deployment Report, the Commission has continued to make progress establishing the Digital Opportunity Data Collection, a new data collection for collecting fixed broadband data to better pinpoint where broadband is available to consumers and where service is lacking, as well as in implementing the Broadband DATA Act. ${ }^{255}$ In the August 2020 Digital Opportunity Data Collection Order and Second Further Notice, the Commission took the next step in developing the new broadband coverage maps by adopting specific coverage reporting and disclosure requirements for fixed and mobile broadband providers, filing and certification requirements, measures for determining the accuracy of broadband availability data (including audits and collecting crowdsourced data), standards for collecting and incorporating verified data for use in the coverage maps from governmental entities and certain third parties, and establishing the Broadband Serviceable Location Fabric. ${ }^{256}$ The Commission also sought comment on several narrow issues relating to implementing the challenge and verification processes for coverage data, implementing the Broadband Serviceable Location Fabric, and certain other specific requirements of the Broadband DATA Act outside the scope of the Digital Opportunity Data Collection Order. ${ }^{257}$

## C. Access to Spectrum

75. Since the last Report, the Commission has made available significant amounts of spectrum in the low-, mid-, and high-frequency bands for mobile providers to develop and deploy new technologies like 5G and to support existing 4G LTE networks.
76. With respect to low-band spectrum, the Commission successfully met the July 2020 deadline established for transitioning television stations from their pre-auction channel assignments in the 600 MHz band following the broadcast incentive auction. ${ }^{258}$ The completion of this transition makes all

[^29](continued....)
of this valuable 600 MHz spectrum available for wireless mobile broadband. ${ }^{259}$
77. In May 2020, the Commission took further action to make low-band spectrum available for the development of critical wireless broadband technologies and services. ${ }^{260}$ Specifically, the Commission realigned the 900 MHz band to make available six of the band's ten megahertz for the deployment of broadband services and technologies to meet the spectrum capacity demands of a wide range of industries, including utilities and railroads. ${ }^{261}$
78. The Commission also has pursued a comprehensive strategy to make available more midband spectrum, which is uniquely suited for 5 G deployment because of its propagation characteristics. ${ }^{262}$ The 2.5 GHz Report and Order, for example, adopted rules to facilitate advanced wireless services, including 5 G , in the 2.5 GHz band-the largest swath of contiguous spectrum in the country below 3 GHz. ${ }^{263}$ The 2.5 GHz Report and Order included a pre-auction priority window for Tribal Nations to apply to obtain unassigned spectrum on rural Tribal lands to address the needs of their communities. ${ }^{264}$ The Wireless Telecommunications Bureau received over 400 applications through the Rural Tribal Priority Window, has already granted 154 of those applications, and accepted another 60 applications for filing. ${ }^{265}$ The Commission plans to schedule an auction of the 2.5 GHz band in $2021 .{ }^{266}$
79. In addition, in August 2020, the Commission concluded its auction of Priority Access Licenses in the 3.5 GHz band. ${ }^{267}$ This auction offered the greatest number of spectrum licenses ever made

${ }^{267}$ Auction of Priority Access Licenses for the 3550-3650 MHz Band; Notice and Filing Requirements, Minimum Opening Bids, Upfront Payments, and Other Procedures for Auction 105; Bidding in Auction 105 Scheduled to Begin June 25, 2020, AU Docket No. 19-244, Public Notice, 35 FCC Rcd 2140 (2020) (3.5 GHz Procedures Public Notice) (rescheduled from June 25, 2020 to July 23, 2020 due to the COVID-19 pandemic); 3.5 GHz Public Notice at 1 , para. 1.
available for bidding in a single auction. ${ }^{268}$ Earlier in 2020, the Wireless Telecommunications Bureau and the Office of Engineering and Technology announced that they had certified Spectrum Access System Administrators to coordinate operations among different tiers of users in the 3.5 GHz band, which paved the way for full commercial operations in the band. ${ }^{269}$ The auction's net proceeds exceeded $\$ 4.54$ billion, with a total of 228 bidders winning 20,625 of 22,631 , or more than $91 \%$, of available licenses. ${ }^{270}$
80. In December 2019, the Commission released a Notice of Proposed Rulemaking regarding shared use in the $3.45-3.55 \mathrm{GHz}$ band between federal operations and commercial wireless services. ${ }^{271}$ In August 2020, the White House announced that, in collaboration with the Department of Defense, it would make available 100 megahertz of contiguous spectrum in the $3.45-3.55 \mathrm{GHz}$ band for mobile wireless providers to build and operate 5 G networks. ${ }^{272}$ The Commission subsequently adopted the $3.45-3.55 \mathrm{GHz}$ Order and Further Notice of Proposed Rulemaking in October 2020 to take steps to bring this mid-band spectrum to market. ${ }^{273}$ The Order eliminated the non-federal radiolocation service and non-federal amateur allocations in the $3.3-3.5 \mathrm{GHz}$ band as a step toward future shared use between federal incumbents and commercial operators. ${ }^{274}$ The Further Notice proposed to make 100 megahertz of spectrum in the $3.45-3.55 \mathrm{GHz}$ band available for flexible use. ${ }^{275}$
81. In March 2020, the Commission adopted an order to make 280 megahertz of the 3.7-4.2 GHz band (C-band) available for next generation wireless services, to compensate incumbent operators for relocating out of that portion of the band, and to provide accelerated relocation payments to incumbent satellite operators that meet early clearance benchmarks for the band. ${ }^{276}$ By repacking existing satellite operations into the upper 200 megahertz of the C-band, the Commission is making a significant amount of spectrum available for flexible terrestrial use throughout the contiguous United States in a manner that ensures the continuous and uninterrupted delivery of services currently offered in the band. ${ }^{277}$ The Commission established competitive bidding procedures for the auction of this valuable mid-band spectrum, Auction 107, which will begin in December 2020. ${ }^{278}$

[^30]82. The Commission has also pursued ways to promote innovative and efficient uses of spectrum. In October 2020, the Commission revised its rules to facilitate the development of new and innovative narrowband Internet of Things devices in TV white spaces and expand the ability of unlicensed white space devices to deliver wireless broadband services in rural areas and areas where fewer broadcast stations are on the air. ${ }^{279}$
83. The Commission also adopted new rules in April 2020 to allow unlicensed devices to operate in the 6 GHz band ( $5.925-7.125 \mathrm{GHz}$ ) without interfering with the operation of the licensed services that will continue to use this spectrum. ${ }^{280}$ The Commission's actions made 1,200 megahertz of spectrum available for unlicensed operations, such as Wi-Fi. Under the 6 GHz Report and Order, unlicensed devices operating at low power levels indoors would have access to the full 1,200 megahertz of spectrum. ${ }^{281}$ In the $5.925-6.425 \mathrm{GHz}$ and $6.525-6.875 \mathrm{GHz}$ sub-bands, unlicensed access points are permitted to transmit both indoors and outdoors at standard power levels that are currently permitted in the 5 GHz band when operated under an automated frequency control (AFC) system. ${ }^{282}$ The Commission sought comment on several additional issues in the 6 GHz FNPRM, including permitting unlicensed devices to operate both indoors and outdoors across the entire 6 GHz band at very-low power levels and increasing the transmit power of indoor access points. ${ }^{283}$ The new rules will facilitate deployment of WiFi 6, the next generation of Wi-Fi that allows for speeds more than two-and-a-half times faster than the current standard while improving performance.
84. Similarly, in December 2019, the Commission adopted a Notice of Proposed Rulemaking that proposed rule changes to allow unlicensed and innovative uses like next-generation Wi-Fi in the $5.850-5.925 \mathrm{GHz}$ band. ${ }^{284}$ The Commission allocated this 75 megahertz of spectrum for Dedicated ShortRange Communications over 20 years ago. ${ }^{285}$ Since that time, however, the technology has not enjoyed widespread commercial adoption or deployment. ${ }^{286}$ Meanwhile, demand for unlicensed services, such as W-Fi- has grown exponentially. ${ }^{287}$ During the COVID-19 pandemic, the Commission granted requests for Special Temporary Authority to more than 100 Wireless Internet Service Providers for temporary access to the lower 45 megahertz of the 5.9 GHz band to expand and improve broadband service provided largely in rural and suburban communities. ${ }^{288}$ On November 18, 2020, the Commission adopted the 5.9 GHz Order, designating the lower 45 megahertz of the band for unlicensed use and the upper 30 megahertz of spectrum for Intelligent Transportation System services, and in particular Cellular Vehicle-

${ }^{288}$ See Press Release, FCC, 5.9 GHz Band Boosts Consumer Internet Access During COVID-19 Pandemic (May 4, 2020), https://docs.fcc.gov/public/attachments/DOC-364138A1.pdf.
to-Everything technology. ${ }^{289}$ The Commission allowed for immediate indoor use of the lower 45 megahertz for unlicensed use while creating a regulatory process for outdoor operations contingent upon protection for federal incumbents and pending adoption of technical rules proposed in the Further Notice. When combined with existing Wi-Fi spectrum in the adjacent 5 GHz band, the Commission's action will allow for near-term deployment of a high-throughput, 160-megahertz channel that will enable gigabit connectivity for schools, hospitals, small businesses, and other consumers.
85. On March 5, 2020, the Commission concluded Auction 103, its auction of Upper 37 $\mathrm{GHz}, 39 \mathrm{GHz}$, and 47 GHz licenses. ${ }^{290}$ Auction 103 offered licenses made available, in part, because existing 39 GHz band licensees committed to relinquishing their 39 GHz spectrum usage rights in exchange for incentive payments determined by bidding in the auction; the incentive payments reduced the amount of any winning bids for new licenses by the entity making the commitment (and the balance payable in cash through auction proceeds). ${ }^{291}$ As a result of the auction, 28 bidders won a total of 14,142 licenses. ${ }^{292}$ Auction 103 resulted in 3,400 megahertz of millimeter-wave spectrum being made available for flexible use services, including 5G-the largest amount of spectrum offered in an auction in U.S. history. ${ }^{293}$
86. Moreover, in June 2020 the Commission adopted a Notice of Proposed Rulemaking and Order proposing rules to allow for new uses of the $71-76 \mathrm{GHz}, 81-86 \mathrm{GHz}, 92-94 \mathrm{GHz}$, and $94.1-95 \mathrm{GHz}$ bands (the $70 / 80 / 90 \mathrm{GHz}$ bands). ${ }^{294}$ The Commission sought comment on potential changes to its antenna standards in the 70 and 80 GHz bands and its current link registration rules for the $70 / 80 / 90 \mathrm{GHz}$ bands that could allow for the provision of wireless backhaul for 5G. ${ }^{295}$ The Commission also proposed to authorize point-to-point links to endpoints in motion in the 70 GHz and 80 GHz bands to support the deployment of broadband services to aircraft and ships. ${ }^{296}$
87. With respect to satellite services, on April 23, 2020, the Commission comprehensively updated the Commission's rules regarding orbital debris mitigation. ${ }^{297}$ The updated regulations were designed to ensure that the Commission's actions concerning radio communications, including licensing U.S. spacecraft and granting access to the U.S. market for non-U.S. spacecraft, mitigate the growth of orbital debris, while at the same time not creating undue regulatory obstacles to new satellite ventures.
88. On May 13, 2020, the Commission adopted rules expanding the scope of operations

[^31]available with Earth Stations in Motion (ESIMs). ${ }^{298}$ The Commission extended licensing rules for ESIMs that operate with GSO FSS space stations to additional frequency bands available for blanket licensing of earth stations at fixed locations. The Commission also adopted rules enabling the licensing of ESIMs with NGSO FSS space stations based on the regulatory framework adopted for ESIM communications with GSO FSS networks.
89. On November 19, 2020, the Commission further streamlined its rules governing satellite services by more closely aligning the licensing processes for space stations and earth stations. ${ }^{299}$ The Commission created an optional, unified license framework to authorize the blanket-licensed earth stations and space stations in a satellite system under a single license. ${ }^{300}$ The Commission also harmonized the build-out requirements for earth stations and space stations and eliminated unnecessary reporting rules to reduce regulatory burdens and provide additional operational flexibility. ${ }^{301}$

## D. Efforts To Ensure and Improve Connectivity During the COVID-19 Pandemic

90. Keep Americans Connected Initiative. The onset of COVID-19 has highlighted the need for residential broadband availability as individuals transition to telework, remote learning, telehealth, and other online options. The Commission has taken many actions to ensure that Americans remain connected throughout the pandemic, many of which are outlined in Chairman Pai's Keep Americans Connected Initiative. ${ }^{302}$
91. Chairman Pai announced the Keep Americans Connected Initiative on March 13, 2020. ${ }^{303}$ To ensure that Americans did not lose their broadband or telephone connectivity as a result of the exceptional circumstances brought about by the pandemic, Chairman Pai specifically asked broadband and telephone service providers and trade associations to take the Keep Americans Connected Pledge. ${ }^{304}$ More than 800 companies and associations signed the pledge, committing to: (1) not terminate service to any residential or small business customers because of their inability to pay their bills due to the disruptions caused by the coronavirus pandemic; (2) waive any late fees that any residential or small business customers incur because of their economic circumstances related to the coronavirus pandemic; and (3) open its Wi-Fi hotspots to any American who needs them. ${ }^{305}$ Chairman Pai also urged companies with low-income broadband programs to expand and improve them, and those without them to adopt such programs. In addition, Chairman Pai called on broadband providers to relax their data usage limits in appropriate circumstances and take steps to promote remote learning and telehealth. ${ }^{306}$

[^32]92. This pledge, intended to provide Americans relief in the early days of the COVID-19 pandemic, expired on June 30, 2020, to allow companies, especially smaller communications companies, to continue to fund their operations. ${ }^{307}$ In preparation for this expiration, Chairman Pai called on broadband and telecommunications service providers to take steps to help ensure that American consumers and small businesses remain connected after June 30, 2020, specifically urging companies to develop payment plans and deferred payment arrangements. ${ }^{308}$
93. To help wireless service providers meet increased consumer demand for broadband during the coronavirus pandemic, the Commission issued more than 200 grants of special temporary authority to use additional spectrum to wireless service providers. ${ }^{309}$ Further, many providers have implemented policies that go beyond the Keep Americans Connected Pledge and address the challenges that Americans face during the COVID-19 pandemic. ${ }^{310}$ In a few noteworthy cases, mobile wireless service providers have increased hotspot data allotments, added new low-cost plans, and provided free wireless data to students for educational purposes. ${ }^{311}$
94. Many fixed broadband service providers have created specific COVID-19 policies aimed at keeping consumers connected. ${ }^{312}$ Comcast, for example, committed to not disconnect services to individuals, waived late fees, maintained free Wi-Fi hotspots, paused data caps, and offered two months free service for new customers in their internet essentials program. ${ }^{313}$ AT\&T removed data overage charges to home internet services, upgraded some 10 Mbps packages to 25 Mbps , and added households that participate in the National School Lunch Program and Head Start to the AT\&T Access program. ${ }^{314}$ Verizon announced it would waive activation fees for new lines and would forego data caps due to the pandemic, and launched a new internet package aimed specifically at lower-income consumers and

[^33]${ }^{314}$ Press Release, AT\&T, COVID-19: Our Response, (Aug. 26, 2020), https://about.att.com/pages/COVID19.html\#consumers.
offered two months free to Lifeline subscribers. ${ }^{315}$ Frontier committed to providing service without data caps throughout the pandemic. ${ }^{316}$ Charter offered free internet packages for students for up to 60 days. ${ }^{317}$ CenturyLink committed to not charge late fees and not disconnect residential customers through June 30, 2020, removed data caps until August 1, 2020, and offered new payment plans for a subset of its customer base. ${ }^{318}$ In addition, many other fixed broadband service providers have also taken measures to protect consumers during the pandemic. ${ }^{319}$
95. COVID-19 Telehealth Program. One of the most critical efforts of the Commission's pandemic response has been the COVID-19 Telehealth Program. The Commission established the COVID-19 Telehealth Program, pursuant to the Coronavirus Aid, Relief, and Economic Security (CARES) Act, which was signed into law on March 27, 2020. ${ }^{320}$ Under this standalone initiative, the Commission provided $\$ 200$ million "to support efforts of health care providers to address coronavirus by providing telecommunications services, information services, and devices necessary to enable the provision of telehealth services" during the pendency of the COVID-19 pandemic. ${ }^{321}$
96. On April 13, 2020, the Commission began accepting applications and made awards on a rolling basis until the $\$ 200$ million of funding authorized by Congress was exhausted. On July 8, 2020, the Commission announced the final set of approved applications. ${ }^{322}$ In all, the Commission approved 539 applications, including more than three thousand health care locations across 49 states plus the District of Columbia and Guam. ${ }^{323}$ The applicants that were awarded funding are able to seek reimbursement from the Commission for eligible services and devices.
97. Regulatory Flexibility for Competitive Eligible Telecommunications Carriers. On March 31, 2020, the Wireline Competition Bureau waived geographic limitations on where certain carriers, known as competitive ETCs, can spend legacy high-cost universal service support. ${ }^{324}$ Specifically, competitive ETCs, who mostly provide mobile wireless service, receive approximately $\$ 382$ million each year in legacy but are required to spend that support only in specific geographic service areas. ${ }^{325}$ The Order waived that strict geographic requirement to allow affiliated competitive ETCs to spend the universal service support in any affiliated ETC's designated service area in order to allow them to respond

[^34]to the pandemic by spending funds where they are needed most to ensure that Americans using these networks can stay connected. ${ }^{326}$
98. Regulatory Flexibility for Rural Health Care and E-Rate Programs. Further, the Commission has acted during the COVID-19 pandemic to provide increased regulatory flexibility in the Commission's Rural Health Care and E-Rate Programs. In an effort to help ensure that healthcare providers have the resources they need to promote telehealth solutions, the Commission adopted an Order on March 13, 2020, to fully fund all eligible Rural Health Care Program services for Funding Year 2019 with an additional $\$ 42.19$ million in funding. ${ }^{327}$ On March 18, 2020 the Wireline Competition Bureau waived the gift rules for both the Rural Health Care and E-Rate Programs, which allowed service providers to offer, and Rural Health Care and E-Rate Program participants to solicit and accept, improved broadband connections or equipment for telehealth or remote learning during the COVID-19 pandemic. ${ }^{328}$ The Bureau extended this waiver twice, to now run through June 30, 2021. ${ }^{329}$ On March 26, 2020, the Bureau provided additional relief to Rural Health Care Program participants by (1) extending the RHC Program application filing window until June 30, 2020; (2) easing competitive bidding requirements for health care providers with expiring evergreen contracts; and (3) providing an extension of procedural deadlines, such as the response time for USAC information requests, the service delivery deadline, the invoice filing deadline, and the deadline for appeals and requests for waiver. ${ }^{330}$ On September 16, 2020, the Wireline Competition Bureau's Telecommunications Access Policy Division waived, under certain conditions, the Rural Health Care Program invoice filing deadline for recipients of funding year 2019 funding commitment letters, extending it to the later of March 15, 2021 or 180 days after the issuance of the funding commitment letter by USAC. ${ }^{331}$ On October 19, 2020, to promote the continued widespread delivery of vital communications-based health care during the pandemic, the Wireline Competition Bureau waived the cap on upfront payments and multi-year commitments for FY 2020 to ensure that all RHC Program requests for support could be funded in full. ${ }^{332}$
99. On March 13, and April 1, 2020, the Wireline Competition Bureau issued various waivers and extensions of certain E-Rate program rules and deadlines, including an extension of the FCC Form 471 application filing deadline for funding year 2020, and extensions of other program deadlines such as the service implementation deadline for special construction and the deadline to submit appeals and waiver requests, respectively. ${ }^{333}$ In addition, on March 23, 2020, the Bureau issued a reminder to

[^35]${ }^{330}$ See Rural Health Care Support Mechanism, WC Docket No. 02-60, Order, 35 FCC Rcd 2922, 2922, para. 1 (WCB 2020).

(continued....)
schools and libraries that are closed as a result of the pandemic that they may allow the general public to use their E-Rate-supported Wi-Fi networks while on the school's campus or the library's property. ${ }^{334}$ And on September 16, 2020, the Bureau announced the opening of a second funding year 2020 FCC Form 471 application filing window to allow schools to request additional E-Rate funding to address increased oncampus bandwidth needs resulting from the pandemic. ${ }^{335}$
100. Regulatory Flexibility for Lifeline Program. Beginning on March 17, 2020, the Wireline Competition Bureau temporarily waived the Lifeline program's annual recertification and reverification requirements to protect Lifeline program participants potentially affected by the COVID-19 pandemic. ${ }^{336}$ In addition, on March 30, 2020, the Bureau also waived the non-usage rules and general de-enrollment rules to prevent Lifeline subscribers from being involuntary de-enrolled during the pandemic ${ }^{337}$ and, on April 29, 2020, eased documentation requirements for subscribers demonstrating eligibility based on income to facilitate the application process for individuals who lost their employment during the pandemic. ${ }^{338}$ Finally, on June 1, 2020, the Bureau streamlined the enrollment process for subscribers residing on rural Tribal lands by enabling carriers to begin providing service to those subscribers prior to the submission of all required documentation. ${ }^{339}$ In August 2020, these waivers were initially extended through November 30, $2020^{340}$ and, in November 2020, they were subsequently extended through February 28, 2021. ${ }^{341}$
101. On November 16, 2020, the Bureau also waived the program rules updating the minimum service standard for mobile broadband, resulting in a standard of $4.5 \mathrm{~GB} /$ month for the next year. ${ }^{342}$ Without this waiver, the standard would have increased to $11.75 \mathrm{~GB} /$ month on December $1,2020 .{ }^{343}$ The Bureau found that preventing an almost fourfold increase in the standard while allowing a moderate increase appropriately balances the program's goals of accessibility and affordability, particularly given consumers' increased reliance on broadband during the COVID-19 pandemic. ${ }^{344}$
102. In addition to these waivers, since the beginning of the pandemic the Commission has partnered with the Department of Health and Human Services (including the Administration for Children and Families, the Administration for Community Living, the Agency for Healthcare Research and Quality, the Health Resources and Services Administration, the Indian Health Service, the Office of the

Assistant Secretary for Planning and Evaluation, and the Substance Abuse and Mental Health Services Administration), the Department of Veterans Affairs (including the Veterans Health Administration's Homeless Programs Office and Office of Connected Care), the Department of Housing and Urban Development (including the Office of Field Policy and Management, the Office of Housing, and the Office of Public and Indian Housing), the Department of Agriculture, the Bureau of Indian Affairs, the Social Security Administration, the Federal Emergency Management Agency, the National Telecommunications and Information Administration, the National Institute for Children's Health Quality, and the National Association of Regulatory Utility Commissioners to promote Lifeline awareness during the pandemic to ensure that consumers who are newly eligible for the program have the information and resources they need to apply.

## VI. SECTION 706 FINDING

103. In light of the compelling evidence before us, we conclude, as the Commission has before, that advanced telecommunications capability is being deployed to all Americans in a reasonable and timely fashion. The available data clearly demonstrate significant progress in the deployment of "advanced telecommunications capability" for calendar year 2019. For example, the number of Americans without access to fixed terrestrial broadband deployment decreased by more than $20 \%$ in 2019, with decreases in urban, rural, and Tribal areas. ${ }^{345}$ More Americans-more than $97 \%$-have access to mobile 4G LTE with median speeds of $10 / 3 \mathrm{Mbps}$, up from less than $94 \%$ in $2018 .{ }^{346}$ Indeed, there were larger deployment increases for both fixed and mobile services, both separately and when combined. ${ }^{347}$ We also are encouraged by the year-over-year increases in fixed terrestrial services at every speed examined in this Report- $10 / 1 \mathrm{Mbps}$ mobile broadband, and $25 / 3 \mathrm{Mbps}, 50 / 5 \mathrm{Mbps}, 100 / 10 \mathrm{Mbps}$, and $250 / 25 \mathrm{Mbps}$ fixed broadband. ${ }^{348}$ And 5G mobile service continues to be rolled out at a breakneck pace by multiple providers. ${ }^{349}$
104. Commenters also applaud Commission policies and efforts to date that promote broadband investment and expansion ${ }^{350}$ and expect that positive trends in deployment will continue. ${ }^{351}$ As
${ }^{345}$ See supra Fig. 1.
${ }^{346}$ See supra Fig. 2b.
${ }^{347}$ See supra Figs. 1, 2b, 3a, 3b.
${ }^{348}$ See supra Fig. 4.
${ }^{349}$ See, e.g., CTIA Comments at 9 ("As of July 8, 2020, there were 6,087 cities with commercially available 5G deployments in the U.S."); Press Release, T-Mobile, T-Mobile Launches World's First Nationwide Standalone 5G Network (Aug. 4, 2020), https://www.t-mobile.com/news/network/standalone-5g-launch (announcing an expansion of the company's 5 G footprint to nearly 2,000 additional cities and towns, and bringing 5 G deeper into buildings); Bernie Arnason, Verizon Expands 4G LTE Fixed Wireless Targeting Rural Markets with 25 Mbps Service, Telecompetitor (Oct. 1, 2020) https://www.telecompetitor.com/verizon-expands-4g-lte-fixed-wireless-targeting-rural-markets-with-25-mbps-service (reporting that Verizon has expanded its 4G LTE fixed wireless service availability to 189 markets across 48 states, targeting more rural areas).
${ }^{350}$ See, e.g., ADTRAN Comments at 13 (touting Commission efforts to date, "including removing disincentives to invest in new or enhanced broadband deployment, eliminating regulatory roadblocks and providing subsidies for broadband deployment in areas where market incentives are insufficient"); INCOMPAS Comments at 13 (The Commission "is taking a reasoned and thoughtful approach to eliminating barriers to the deployment of the next generation of communications networks."); ACA Connects Comments at 6; CTIA Comments at 34.
${ }^{351}$ See, e.g., Free State Foundation Comments at 3-4, 9 ("The pace of fiber deployment continues to accelerate, and . . . current wireline broadband facilities will remain competitive going forward. . . . We fully expect additional forthcoming data will show deployment progress exceeding that which has been made in prior years. . . . The prodeployment trend that began in 2017 is likely to continue . . ."). We disagree with Free Press's assertion that the progress made in broadband deployment is not attributable, at least in large part, to the Commission's policymaking efforts. Free Press Comments at 15-48. As an initial matter, Free Press completely ignores the Commission's universal service and spectrum access policies, which have without question produced positive results in spurring
in recent years, we note that some of the Commission's actions of late, undertaken to speed broadband deployment, likely are not yet fully reflected by the data used in our analysis here, as those data only provide the extent of U.S. broadband deployment through December 2019.
105. The Commission's efforts to respond to the COVID-19 epidemic have also ensured continuity of service to support broadband access for telework, telehealth, and remote learning, all of which have become especially important during the pandemic. ${ }^{352}$ A number of commenters also explain that the pandemic has highlighted the importance of bridging the digital divide in order to ensure that no American is left unable to function in a society that is moving increasingly online, and that all Americans are able to benefit from the many digital resources available today. ${ }^{353}$
106. We disagree with commenters that contend that the section 706 requirements have not been met. ${ }^{354}$ As the Commission has previously stated, the statute requires that we determine whether advanced telecommunications capability "is being deployed to all Americans"-not whether it has already been deployed to all Americans-and reading section 706(b) to require universal availability as a prerequisite for a positive finding would disregard the statute's "reasonable and timely" language. ${ }^{355}$ With respect to those that contend that the inaccuracies in our current data necessarily render any findings
(Continued from previous page)
additional deployment. Indeed, the record firmly establishes the success of these programs. See, e.g., CTIA Comments at 31, 32-33; USTelecom Comments at 16, WISPA Comments at 12-13. Further, several commenters point to direct causal linkage between the Commission's actions and broadband deployment. For example, INCOMPAS notes that the Commission's "adoption of a one-touch make-ready policy that allows fiber providers to attach their fiber to utility poles in a more efficient manner . . . enables more fiber to be deployed." INCOMPAS Comments at 12; see also USTelecom Comments at 16 (applauding Commission leadership for making access to broadband possible for millions of Americans, and predicting that completion of Phase I of the Rural Digital Opportunity Fund auction will improve this trend even more ). INCOMPAS also points out that the Commission's efforts to establish shot clocks and fee guidelines for state and local governments have accelerated 5G deployment. INCOMPAS Comments at 12-13. ACA Connects states that the Commission's removal of "regulatory barriers to deployment to accelerate investment . . . ha[s] unleashed investment and led to more robust deployment." ACA Connects Comments at 6; see also CTIA Comments at 34 ("The Commission's efforts to reduce barriers to wireless infrastructure deployment have had measurable results . . . ."). ADTRAN argues that the Commission's efforts "providing subsidies for broadband deployment in areas where market incentives are insufficient" have "foster[ed] the deployment of broadband." ADTRAN Comments at 13. These comments show that the Commission's policies have proven successful at increasing broadband deployment.
${ }^{352}$ See, e.g., NTCA Comments at 4; Common Cause et al. Comments at 32; ADTRAN Comments at 8 .
${ }^{353}$ See, e.g., NCTA Comments at 4 ("As the Commission has explained, a positive finding under Section 706 should not be considered a suggestion that its work with respect to the availability of broadband to all Americans is complete. That is particularly true this year as the COVID crisis has exposed the serious consequences for consumers that do not have access to broadband and the urgent need to rectify that situation as quickly as possible."); Benton Institute et al. Comments at 7 (emphasizing the need "to bridge the gaps between those who have access and those who do not, as the pandemic underscores how essential internet access is for survival and recovery"); Common Cause et al. Comments at 32 ("[M]illions of Americans still do not have access to either minimum broadband speeds or reliable service, which has become particularly detrimental over the last several months as work, school, and healthcare have migrated online.").
${ }^{354}$ See, e.g., Benton Institute et al. Comments at 2; Broadband Connects America Comments at 6; Free Press Comments at 8; Benton Institute Reply at 3; CWA Reply at 2-3; Open Technology Institute \& Access Now Reply at 2-3.
${ }^{355}$ See 2020 Report, 35 FCC Rcd at 9032-34, para. 93; 2019 Report, 34 FCC Rcd at 3859-60, para. 8, 3898-99, para. 78; see also CTIA Comments at 5 ("Were it Congress's intent to seek Commission input on whether deployment to all Americans has been achieved, Congress easily could have done so by directing the Commission to report on whether telecommunications capability 'has been deployed' in a reasonable and timely fashion-and Congress did not do so."); USTelecom Reply at 2 ("[A]n approach that evaluates progress toward full deployment is appropriate and most consistent with the statute.").
we might reach here inherently inaccurate or problematic, ${ }^{356}$ the FCC Form 477 data remains the best available data and provides a consistent means to measure progress. Despite any shortcomings in Form 477 data, the rapid pace of deployment and expansion of services to new areas is undeniable. At the same time, we continue to recognize the problems with the FCC Form 477 data, and notes that the efforts to improve our data collection are already underway. ${ }^{357}$ In the interim, however, we are still obligated to conduct our annual section 706 inquiry. ${ }^{358}$
107. We are confident that the Commission's policymaking efforts over the last few years have placed the Commission on the proper course and are encouraging strong progress in deploying advanced telecommunications capability to more and more Americans. ${ }^{359}$ The progress demonstrated by the deployment data is consistent with the evidence in the record showing continuing network investment in 2019. ${ }^{360}$ Further, longer-term measurements show substantial progress. Since the end of 2016, the number of Americans lacking access to $25 / 3 \mathrm{Mbps}$ service has decreased by more than $44 \%$, and the urban-rural divide has decreased by over $46 \%$. ${ }^{361}$ And, over the same period, the number of Americans lacking access to mobile broadband with a median speed of $10 / 3 \mathrm{Mbps}$ was reduced by nearly $80 \%$. $^{362}$ Thus, we find that the data we do have is sufficiently indicative of progress in deployment to give us reasonable confidence that advanced telecommunications capability is being deployed in a reasonable and timely manner. These circumstances warrant a positive finding.
108. We remain cognizant that our work to close the digital divide is not complete. We recognize that the 2019 data show that nearly 14.5 million people, still lack access to fixed terrestrial

[^36]${ }^{357} 2020$ Report, 35 FCC Rcd at 8997-98, paras. 24-25; 2019 Report, 34 FCC Rcd at 3868, para. 24; Digital Opportunity Data Collection Second Report and Order and Third Further Notice.
${ }^{358}$ See, e.g., 2020 Report, 35 FCC Rcd at 8997-98, paras. 24-25; 2019 Report, 34 FCC Rcd at 3868-69, paras. 2426; see also ADTRAN Comments at 9-10 ("[T]he fact that more accurate and more granular data will be available for future Section 706 inquiries is no reason to decline to use the best available information that the Commission has presently. Notwithstanding the potential for [FCC] Form 477 to overstate broadband deployment, it remains the most comprehensive data available."); Free State Foundation Comments at 13 (stating that criticism of the accuracy of the FCC Form 477 data does "not change the fact that the Commission has a statutory duty to prepare its report. The Commission should carry out that duty using the best data at its disposal, while at the same time, continuing to press Congress to provide the funding needed for the agency to undertake new broadband mapping work"); USTelecom Comments at 14 ("While some, including USTelecom, have criticized the FCC Form 477 data for overstating deployment, . . . the degree of overstatement is proportionately inconsequential to the broader conclusions and trends . . . .").
${ }^{359}$ ADTRAN Comments at 10 ("[G]iven the consistency with prior years' Section 706 analyses based on the [FCC] Form 477 data, use in this year's assessment should continue to provide an accurate measure of trends, even if data for specific census blocks may be overstated."); USTelecom Comments at 14 ("USTelecom agrees with the Commission that using Form 477 deployment data for fixed technologies is currently the most reliable and comprehensive dataset with which to assess availability of fixed services. . . [T]he shortcomings of Form 477 data are absent in smaller, more densely populated geographic areas where multiple providers are offering broadband service using a variety of technologies. . . . At the same time, USTelecom applauds the Commission for acknowledging the weak points in this data and striving for improvement.").
${ }^{360}$ See, e.g., CTIA Comments at 6-12; Free State Foundation Comments at 1-3, 5-8; NCTA Comments at 3-4; USTelecom Comments at 5-7 (all listing recent industry investments and expansion efforts). Moreover, there is no documented evidence in the record suggesting that the progress in deployment shown in the data is a function of data deficiencies.
${ }^{361}$ See supra Fig. 1.
${ }^{362}$ See supra Fig. 2b.
advanced telecommunications capability. ${ }^{363}$ While deployment is improving in all geographic areas, we recognize that there is still significant work to do to encourage deployment to rural areas, where more than $17 \%$ of Americans lack access, and Tribal lands, where nearly $21 \%$ of Americans lack access. ${ }^{364}$ We agree with ADTRAN that "making an affirmative finding that advanced telecommunications capabilities deployment is occurring on a reasonable and timely basis does not mean the Commission can then 'pat itself on the back' and declare the job done." ${ }^{365}$ And we agree with Free State Foundation that, notwithstanding our positive finding here, we should continue to remove barriers to deployment. ${ }^{366}$ Therefore, the further deployment of advanced telecommunications capability to close the digital divide will remain a top priority of the Commission as we continue our efforts to deliver the benefits of broadband to all Americans.

## VII. ORDERING CLAUSE

109. Accordingly, IT IS ORDERED that, pursuant to section 706 of the Telecommunications Act of 1996, as amended, 47 U.S.C. § 1302, this Report IS ADOPTED.

Marlene H. Dortch
Secretary

[^37]
## APPENDIX A

Deployment (Millions) of Fixed Terrestrial 25/3 Mbps; Mobile 4G LTE with a Minimum Advertised Speed of $5 / 1 \mathrm{Mbps}$; and Mobile 4G LTE with a Median Speed of $10 / 3$ Mbps by State, District of Columbia and U.S. Territory (December 31, 2019) ${ }^{1}$

## STATEMENT OF COMMISSIONER BRENDAN CARR

## Re: Inquiry Concerning Deployment of Advanced Telecommunications Capability to All Americans in a Reasonable and Timely Fashion, GN Docket No. 20-269.

Since 2017, the FCC's top priority has been to close the digital divide. And today's report confirms that our efforts have enabled the private sector to build out high-speed Internet infrastructure at an unprecedented pace. Indeed, the digital divide has nearly been cut in half since the end of 2016. All of these new connections have been enabled by common sense reforms to our infrastructure rules-reforms that allowed the private sector to build a record-breaking 46,000 new cell sites in 2019 alone, which is more than the combined number of sites previously built from 2015 through 2018. The FCC also worked tirelessly to free up the airwaves needed to power these new cell sites. Indeed, the Commission has recently made more than six gigahertz of spectrum available for licensed 5 G services in addition to thousands of megahertz of unlicensed spectrum.

I am grateful for the chance to have led the FCC's wireless infrastructure reforms over the past three years, and I hope that the Commission continues to advance the proven and successful approaches to infrastructure and spectrum that are now delivering results in communities across the country.

## STATEMENT OF <br> COMMISSIONER JESSICA ROSENWORCEL, DISSENTING

Re: Inquiry Concerning Deployment of Advanced Telecommunications Capability to All Americans in a Reasonable and Timely Fashion, GN Docket No. 20-269.

We are in the middle of a pandemic. So much of modern life has migrated online. As a result, it has become painfully clear there are too many people in the United States who lack access to broadband. In fact, if this crisis has revealed anything, it is the hard truth that the digital divide is very real and very big.

So it confounds logic that today the FCC decides to release a report that says that broadband is being deployed to all Americans in a reasonable and timely fashion.

If you want evidence this is not right, it's all around us. There are people sitting in parking lots using free Wi-Fi signals because they have no other way to get online. There are students who fall in the homework gap because the lack the high-speed service they need to participate in remote learning. There are mayors in towns across the country clamoring for better broadband so their communities have a fair shot at digital age success. Across the country there are state authorities developing new plans, maps, and initiatives at the behest of their residents. Then there's Congress, which took its cues from all of this, and just passed legislation committing $\$ 7$ billion to new nationwide broadband efforts-and more is likely to come.

What I take from all of this activity is that the job is not done. There is progress. But we have not yet reached all Americans. We have real work to do before we can claim that $100 \%$ of this country has access to broadband service. I dissent.

## STATEMENT OF COMMISSIONER GEOFFREY STARKS

## Re: Inquiry Concerning Deployment of Advanced Telecommunications Capability to All

 Americans in a Reasonable and Timely Fashion, GN Docket No. 20-269.Over the last two years, I have decried the unwarranted victory laps these reports seem to spawn. Now-as tens of millions of Americans find themselves unable to access online school, work, and healthcare during the pandemic-patting ourselves on the back is particularly unseemly. My views on the flaws in the data and analysis underlying this Report are well documented, and I will not repeat them here. But I am compelled to note that this Report should not have been released at all. After the election in November, congressional leaders wrote to Chairman Pai to demand that the Commission stop work on all partisan and controversial items during the presidential transition. This item is both.

Nonetheless, Chairman Pai declined to withdraw the Report as Commissioner Rosenworcel and I requested. His rationale - that the Report has no legal significance-is plainly inconsistent with the Telecommunications Act, which directs the Commission to take "immediate action" if it determines that advanced telecommunications capability is not being deployed to all Americans on a reasonable and timely basis. That determination should have been left to the next administration, which could have addressed the question before the statutory deadline. For this reason and the substantive reasons I outlined at the Notice of Inquiry stage, I dissent.

[^0]:    ${ }^{1} 47$ U.S.C. § 1302(a).
    ${ }^{2}$ See infra Fig. 1. When we provide broadband speed figures, we present both the download and upload speeds. In the case of $25 / 3 \mathrm{Mbps}$, for example, we refer to broadband service that has a download speed of 25 Mbps and an upload speed of 3 Mbps .
    ${ }^{3} I d$.
    ${ }^{4}$ See infra Fig. 1 (comparing the difference in the percent of Americans in urban versus rural areas with access to $25 / 3 \mathrm{Mbps}$ as of December 31, 2019 and December 31, 2016).
    ${ }^{5}$ See infra Fig. 2b. Consistent with the Commission's conclusion in the 2020 Report, we consider both fixed and mobile services as capable of meeting the definition of "advanced telecommunications capability." Inquiry Concerning the Deployment of Advanced Telecommunications Capability to All Americans in a Reasonable and Timely Fashion, GN Docket No. 19-285, 2020 Broadband Deployment Report, 35 FCC Rcd 8986, 8989, para. 7 (2020) (2020 Report). For the reasons set forth below, we will continue to evaluate mobile deployment at speeds of $5 / 1 \mathrm{Mbps}$ and $10 / 3 \mathrm{Mbps}$ in this Report.

[^1]:    ${ }^{6}$ See infra Fig. 3b.
    ${ }^{7}$ CTIA, 2020 Annual Survey Highlights (Aug. 25, 2020), https://www.ctia.org/news/report-2020-annual-surveyhighlights (CTIA 2020 Annual Survey Highlights); CTIA Comments at 9. We are not aware of a comprehensive estimate of total fixed and mobile broadband network spending for calendar year 2019. The results, however, speak for themselves, as the increased deployment discussed in this Report would not be possible without substantial investment.
    ${ }^{8}$ CTIA Annual Survey Highlights; CTIA Comments at 6-13.

    ${ }^{112}$ Digital Opportunity Data Collection Order and Second Further Notice, 34 FCC Rcd at 7521-22, para. 36-40.
    ${ }^{113} \mathrm{Id}$. at 7523-24, para. 41-43.

[^9]:    ${ }^{122}$ See infra Appendix H.

[^10]:    ${ }^{123}$ For example, as of December 31, 2019, the adoption rate for fixed wireless services of at least $10 / 1 \mathrm{Mbps}$ was $2 \%$. FCC Form 477 Data as of December 31, 2019. This contrasts with the $60 \%$ adoption rate for cable and the $32 \%$ adoption rate for fiber-based services at the same speeds where these services are available in the United States. Id.

    ## ${ }^{124}$ See infra Appendix I.

    ${ }^{125}$ For fixed services, the Commission has been able to rely upon FCC Form 477 reported maximum advertised speeds to track actual speeds. However, we note that the relationship between actual speeds and the advertised speed reported in the FCC Form 477 for mobile services is more complex, because minimum advertised speed is reported by the mobile providers, and different mobile providers estimate their minimum advertised speed based on various points of their actual speed distribution. 2020 Report, 35 FCC Rcd at $9000-01$, para. 32 n .104 . By contrast, the Ookla data provide us with the actual speeds that consumers experience.
    ${ }^{126}$ See generally Digital Opportunity Data Collection proceeding.
    ${ }^{127}$ See, e.g., 2020 Report, 35 FCC Rcd at 9000-01, para. 32.
    ${ }^{128}$ The data collected by the Ookla Speedtest mobile app include test results for download speed, upload speed, and latency, as well as other information, such as the location of the test and operating system of the handset. 2020 Report, 35 FCC Rcd at 9001-02, para. 33 n.107; see also https://www.speedtest.net/about. The Ookla results presented in this Report are based on tests that were executed in the second half of the year for 2015, 2016, 2017, 2018, and 2019 on the smartphone's cellular connection, and using 4G LTE technology. Test data were excluded if they had missing GPS location data or if the reported download or upload speed was less than zero. For all years up to and including 2017, test data were excluded if the reported download or upload speed was greater than 100 Mbps ; however, beginning in 2018, this rule was no longer applied, due to changes in network engineering that increased the theoretical maximum upload and download speeds. Multiple tests by a single phone in the same locality and in the same day were averaged (using the median). All Ookla speed tests are user-initiated.
    ${ }^{129}$ We note that, in general, crowd-sourced data can offer the advantage of generating a large volume of data at a very low cost, and of measuring actual consumer experience on a network in a wide variety of locations, indoor and outdoor. Crowd-sourced data, however, often are not collected pursuant to statistical sampling techniques, and may require adjustments to construct a representative sample from the raw data. For instance, crowd-sourced mobile data come from a self-selected group of users, and there often is little control for most tests regarding such parameters as when people implement the test, whether the test is performed indoors or outdoors, the geographic

[^11]:    ${ }^{145}$ For purposes of presenting estimates for rural and urban areas in this section, we aggregate all similarly categorized areas. The designation of a census block as urban is based upon the 2010 Census. An urban census block encompasses all population, housing, and territory included within a census block categorized as in an urban area or urban cluster. A rural census block encompasses all population, housing, and territory not included within urban census blocks. U.S. Census, Urban and Rural, http://www.census.gov/programs-surveys/geography/guidance/geo-areas/urban-rural.html (last visited Oct. 29, 2020).
    ${ }^{146}$ We present additional deployment data for mobile 4G LTE services for each state, the District of Columbia, U.S. Territory, and each category of Tribal land in the appendices. See infra Appendices A, B, and C (reporting figures by state, the District of Columbia, and U.S. Territory), Appendices D and E (reporting figures by county and county equivalent, state, the District of Columbia, and U.S. Territory), and Appendix F (reporting figures for Tribal lands).
    ${ }^{147}$ The analyses in Figures 2a to 3d exclude the U.S. Territories. The analyses in Figures 2a, 3a, and 3c are based on FCC Form 477 data. In contrast, the analyses in Figures 2b, 3b, and 3d are based on Ookla data, and exclude any

[^12]:    ${ }^{148}$ We present additional deployment data for fixed terrestrial $25 / 3 \mathrm{Mbps}$ and/or mobile 4G LTE services in the appendices. See infra Appendices A, B and C (reporting figures by state, District of Columbia, and U.S. Territory), Appendix D (reporting figures by state, county and county equivalent), Appendix E (reporting figures by urban and rural areas within each state, county or county equivalent, state, the District of Columbia, and U.S. Territory), and Appendix F (reporting figures for Tribal lands).

[^13]:    ${ }^{149}$ Appendices A-E include data for the U.S. Territories.
    ${ }^{150}$ We present deployment estimates for all fixed services, including satellite broadband, in Appendix H, and deployment estimates for all fixed wired services, excluding satellite and fixed wireless services, in Appendix I. See infra Appendices H, I. The data in Figure 4 and Appendices H and I exclude the U.S. Territories.

[^14]:    ${ }^{151}$ To present demographic data and compare the demographic data between areas where services are and are not deployed, we aggregate the census block data up to the census block group level, the lowest aggregation level for which demographic information is available. This unavoidable aggregation leads to census blocks with differing characteristics being grouped together. In the case of differing levels of deployment, we designate a census block group as without deployment if more than $5 \%$ of the population in the census block group is without services, regardless of the level of deployment in any particular census block in the group. Further, some census block groups are a mix of census blocks that are designated as rural and urban. In such instances, we designate a census block group as rural if more than $50 \%$ of the population in the census block group resides in census blocks designated as rural. Finally, we designate a census block group as Tribal lands if more than $50 \%$ of the land area in the census block group is designated as Tribal lands. We use the most recently available Census Bureau's ACS Five-Year Estimates 2014-2018 for income and poverty measures for the states, District of Columbia and Puerto Rico; income

[^15]:    ${ }^{154}$ As above, we exclude the U.S. Territories from this analysis due to a lack of Ookla data for these areas, and we do not report separately for Tribal lands because of concerns with the representativeness of the Ookla data for these areas.
    ${ }^{155}$ Data exclude U.S. Territories other than Puerto Rico.

[^16]:    ${ }^{156}$ We present these results at the census block group, the smallest geographic areas for which income data are available, to examine how the deployment rate varies with income measures in the geographic area.
    ${ }^{157}$ Data exclude U.S. Territories other than Puerto Rico.

[^17]:    ${ }^{158}$ Data exclude U.S. Territories other than Puerto Rico.
    ${ }^{159}$ We present more granular state-by-state Tribal lands data in Appendix F.

[^18]:    ${ }^{160}$ We exclude data from the U.S. Territories when showing the five-year progression of deployment and adoption of broadband services because of anomalies in the historical data for Puerto Rico and the U.S. Virgin Islands, whose populations account for over $92 \%$ of the total combined population of the U.S. Territories. The historical data suggest a 21.7 percentage point increase in deployment between 2015 and 2016. 2020 Report, 35 FCC Rcd at 8999, para. $28 \& \mathrm{n} .95$. The year-end 2017 deployment data most likely significantly overstate deployment in Puerto Rico and the U.S. Virgin Islands at that time because the data do not reflect infrastructure damage caused by Hurricanes Maria and Irma. We include data from the U.S. Territories in figures that report data since 2018 only as we believe these FCC Form 477 data collections provide reliable estimates for the U.S. Territories.
    ${ }^{161}$ Subscriber data is reported at the census tract level. We aggregate deployment data up to the census tract to identify urban core and non-urban core areas. A census tract is designated as "Urban Core" if it has a land area less than three square miles and a population density of at least 1,000 people per square mile. A census tract is designated as "Non-Urban Core" if we have not designated the census tract as Urban Core.

[^19]:    ${ }^{162}$ We present adoption data for each state, U.S. Territory, and the District of Columbia in Appendix H.
    ${ }^{163}$ This demographic analysis is based upon county level adoption rates and the Census Bureau's American Community Survey (ACS) Five-Year Estimates 2014-2018 for income and poverty measures for county-level data
